Charge Particle Distribution

Outline

Part I Introduction

- Parton and Intrinsic Transverse Momentum
- Deep Inelastic Scattering
- The Physical Phenomena to Charge Particles Spectrum

Part II Simulation

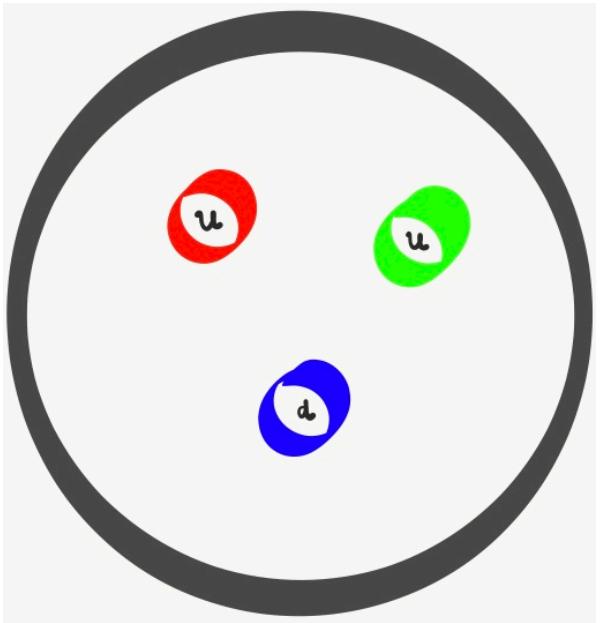

- Monte Carlo generators vs HERA data
- A higher Resolution Scale Q^2

Part III Conclusion

- Summary

Part I Introduction

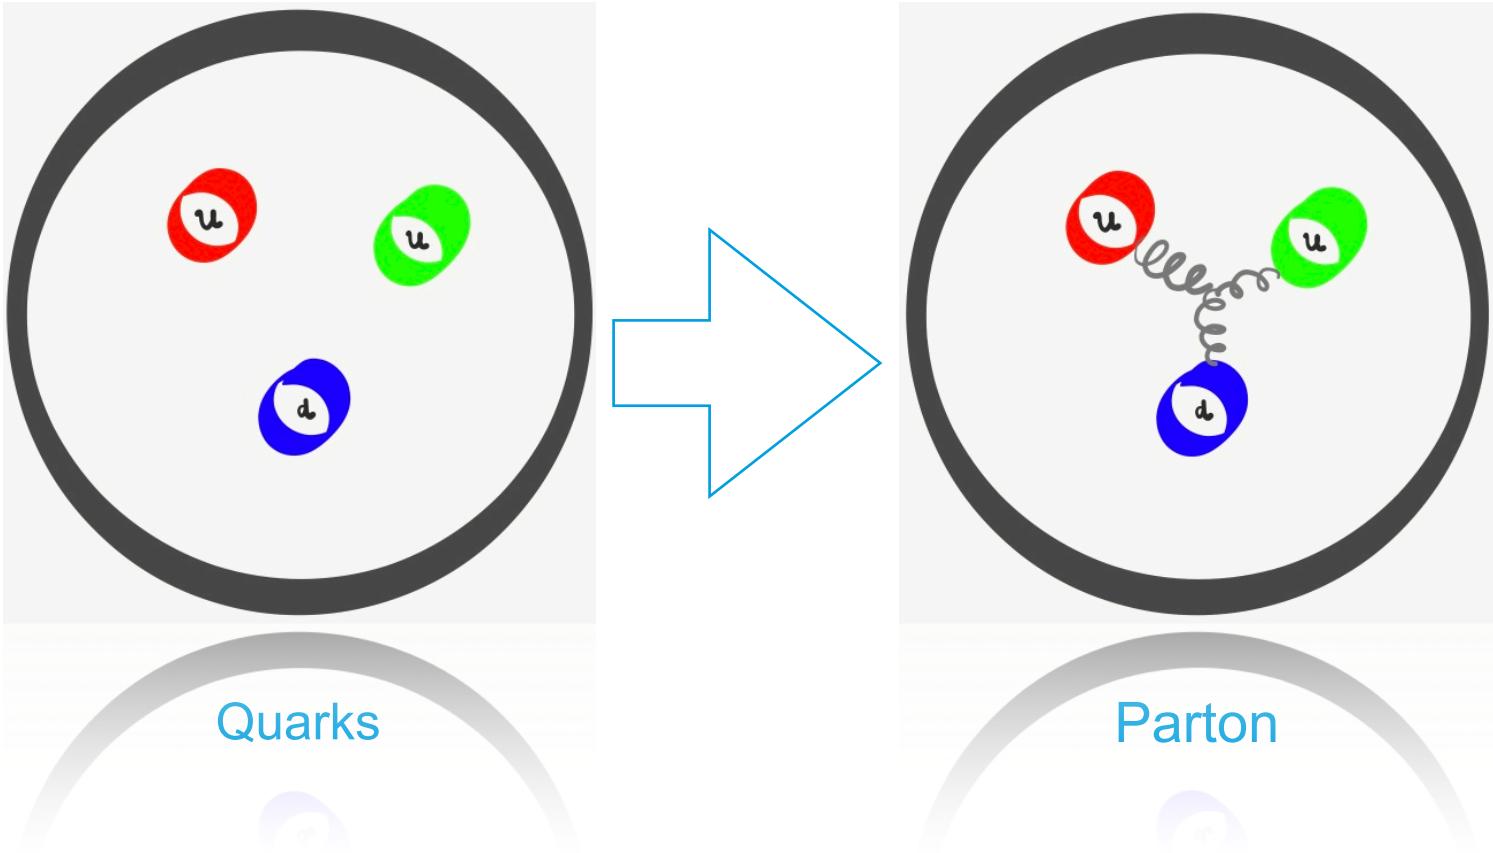

Parton and intrinsic transverse momentum

Quarks

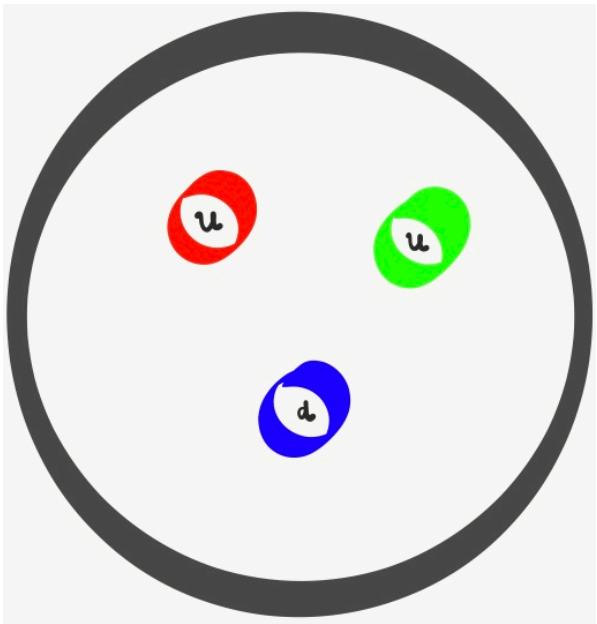

Part I Introduction

Intrinsic k_T

Part I Introduction

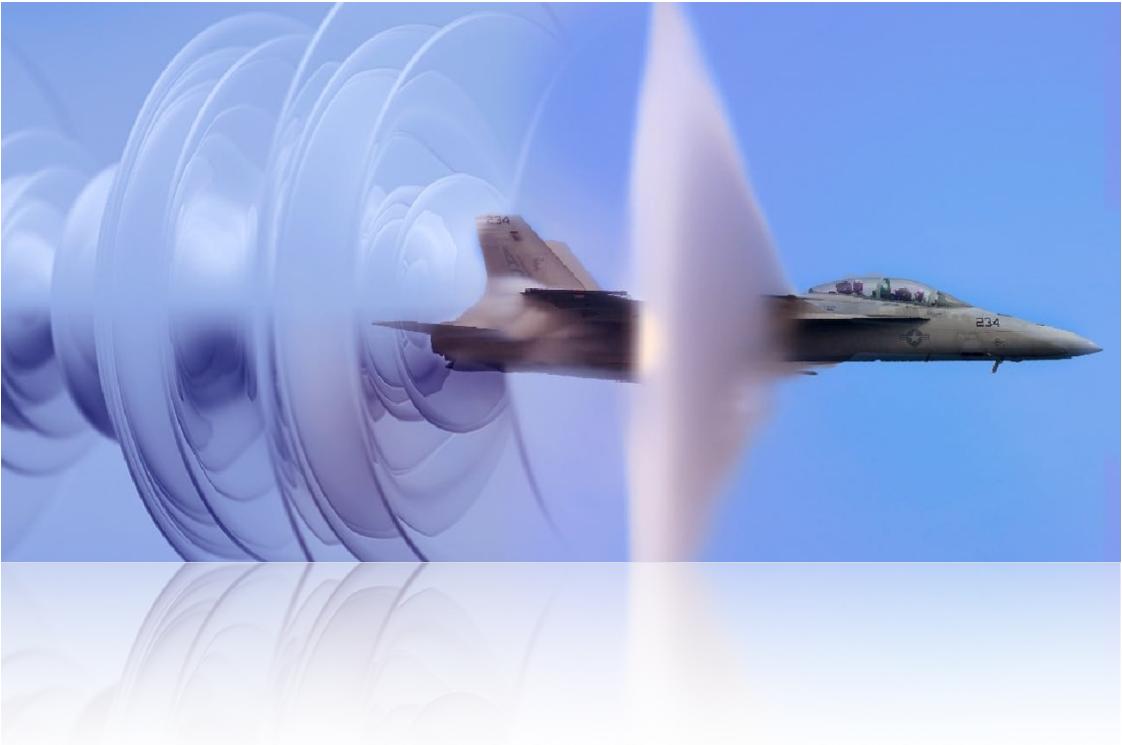

The Influence

Part II Simulation

Calculation by using RAPGAP

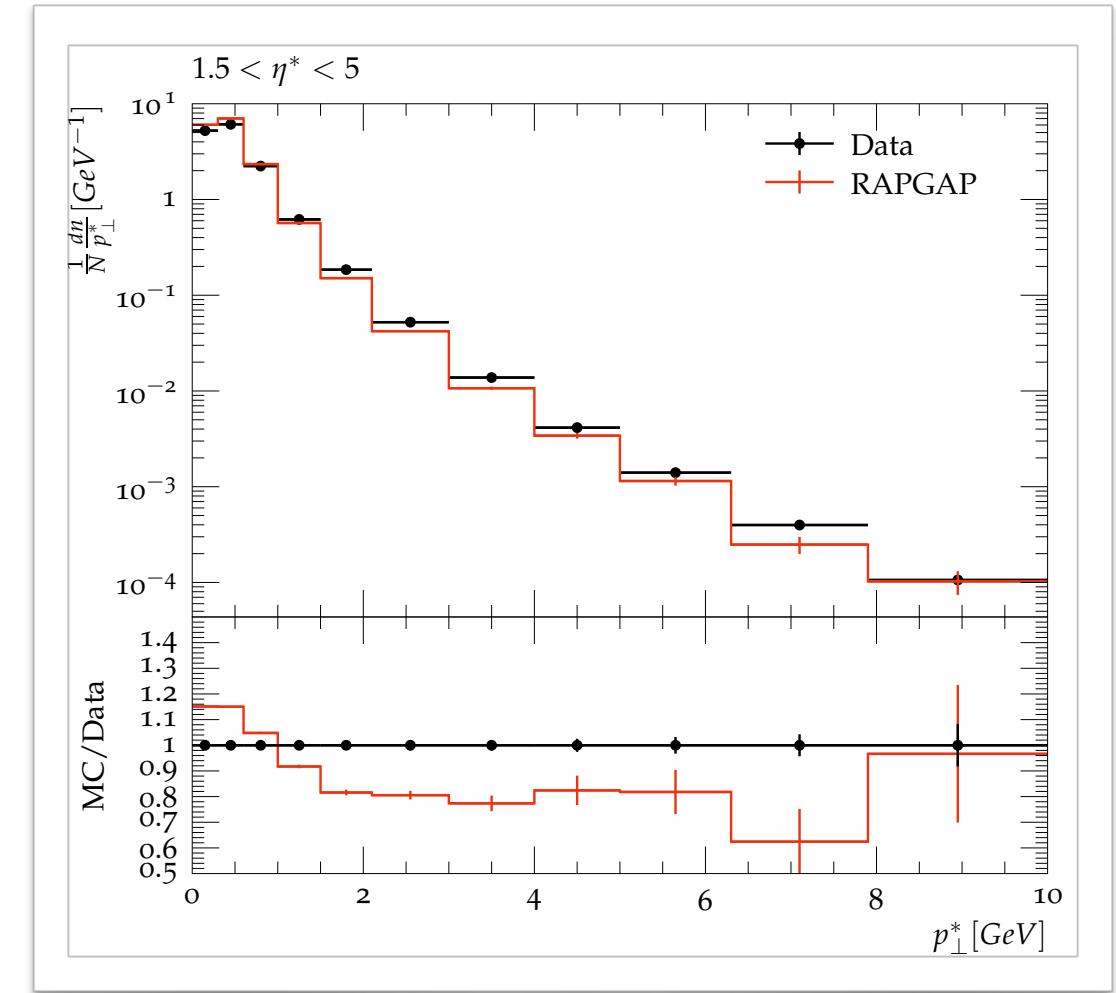

Resolution Scale : $5 < Q^2 < 100 \text{ GeV}^2$

Positron energy : 27.6 GeV^2

Proton energy : 300 GeV^2

PDF : CTEQ6L(LO)

Reference Data Eur.Phys.J.C (2013) 73:2406

Part II Simulation

Validation of different validations

Resolution Scale : $5 < Q^2 < 100 \text{ GeV}^2$

Positron energy : 27.6 GeV^2

Proton energy : 300 GeV^2

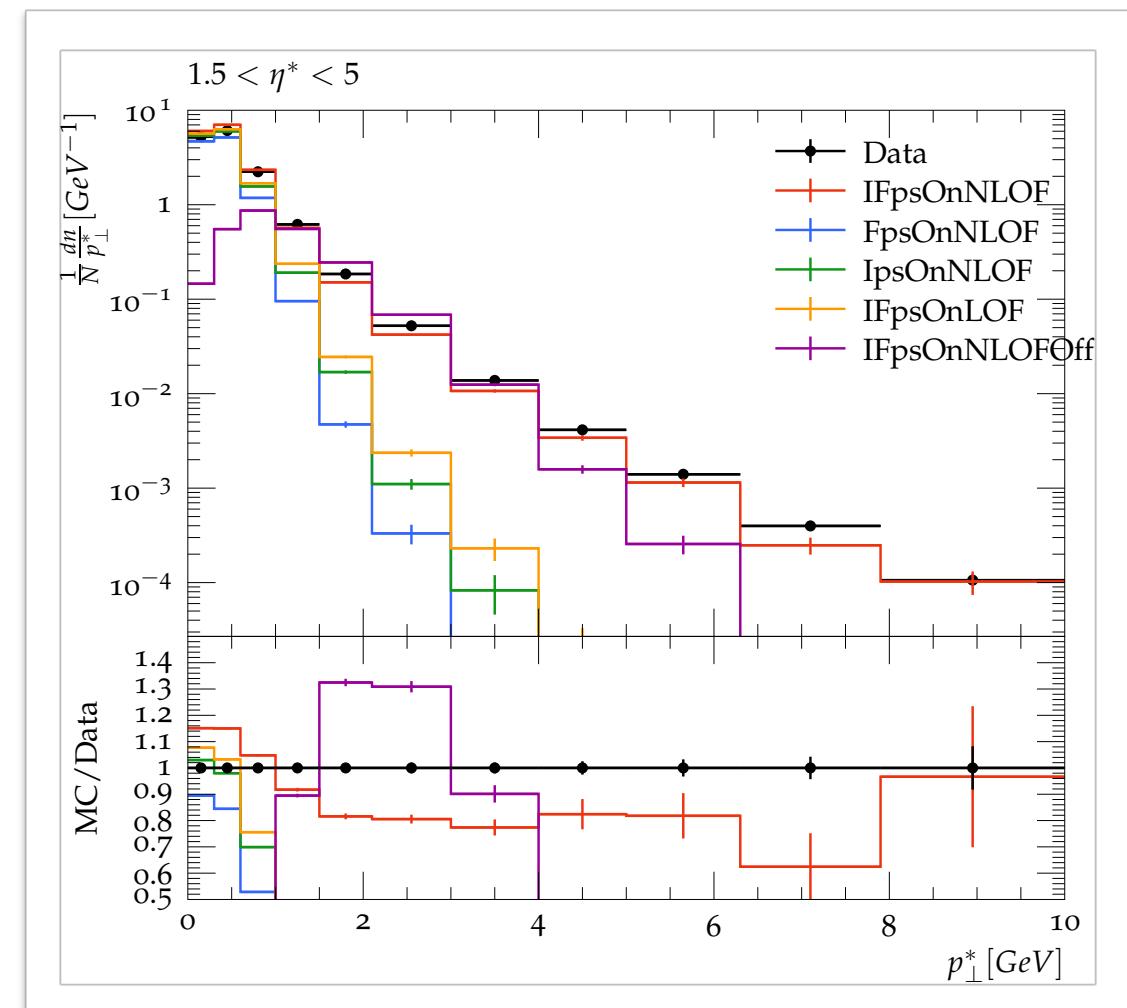

PDF : CTEQ6L(LO)

I : Initial state Parton Shower

F: Final state Parton Shower

NLO : Next Leading Order

F : Fragmentation or Hadronization

Part II Simulation

Validation of intrinsic k_T by using Pythia

Resolution Scale : $5 < Q^2 < 100 \text{ GeV}^2$

Positron energy : 27.6 GeV^2

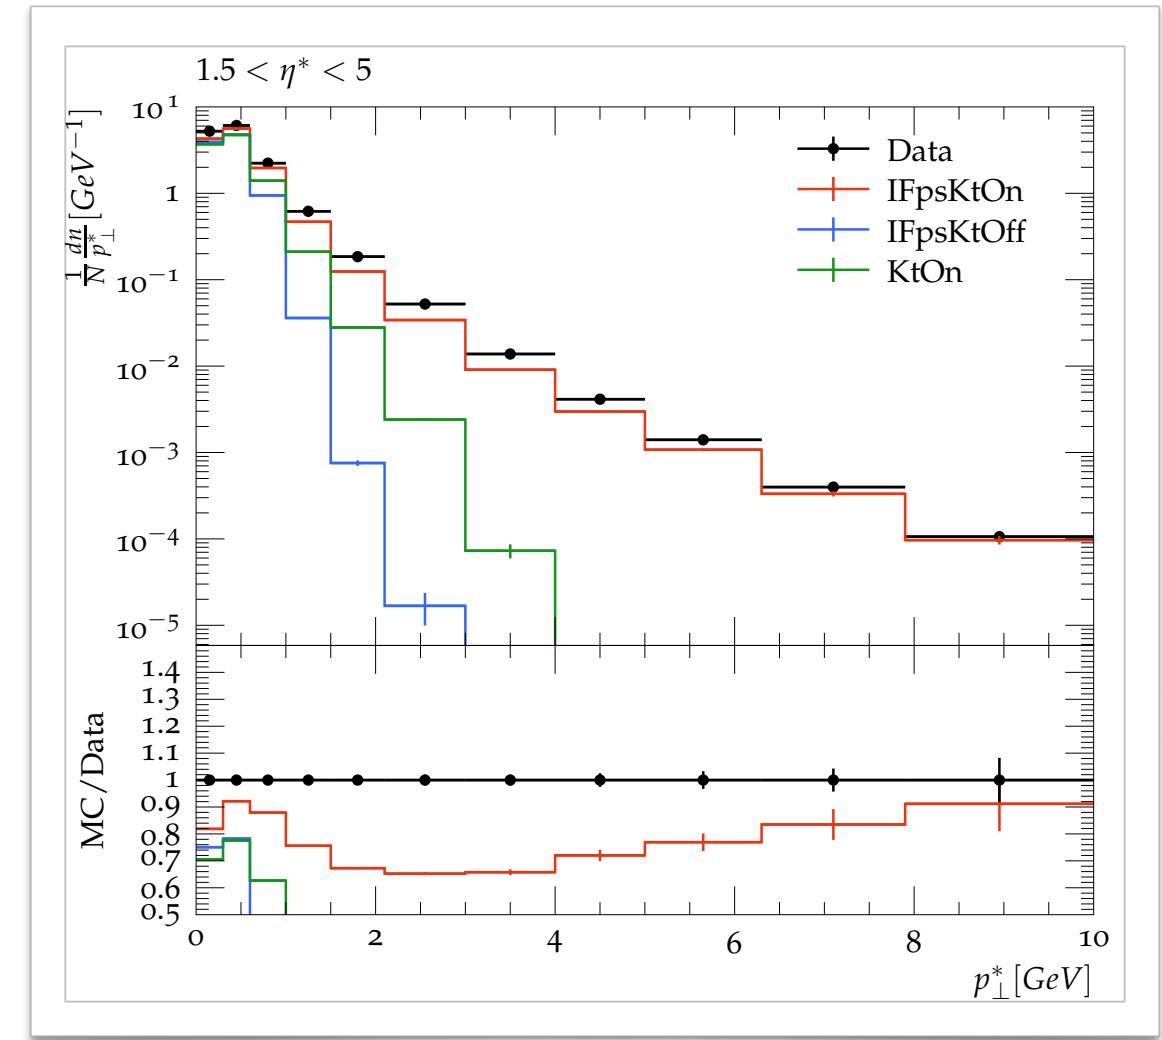

Proton energy : 300 GeV^2

PDF : CTEQ6L(LO)

I : Initial state Parton Shower

F: Final state Parton Shower

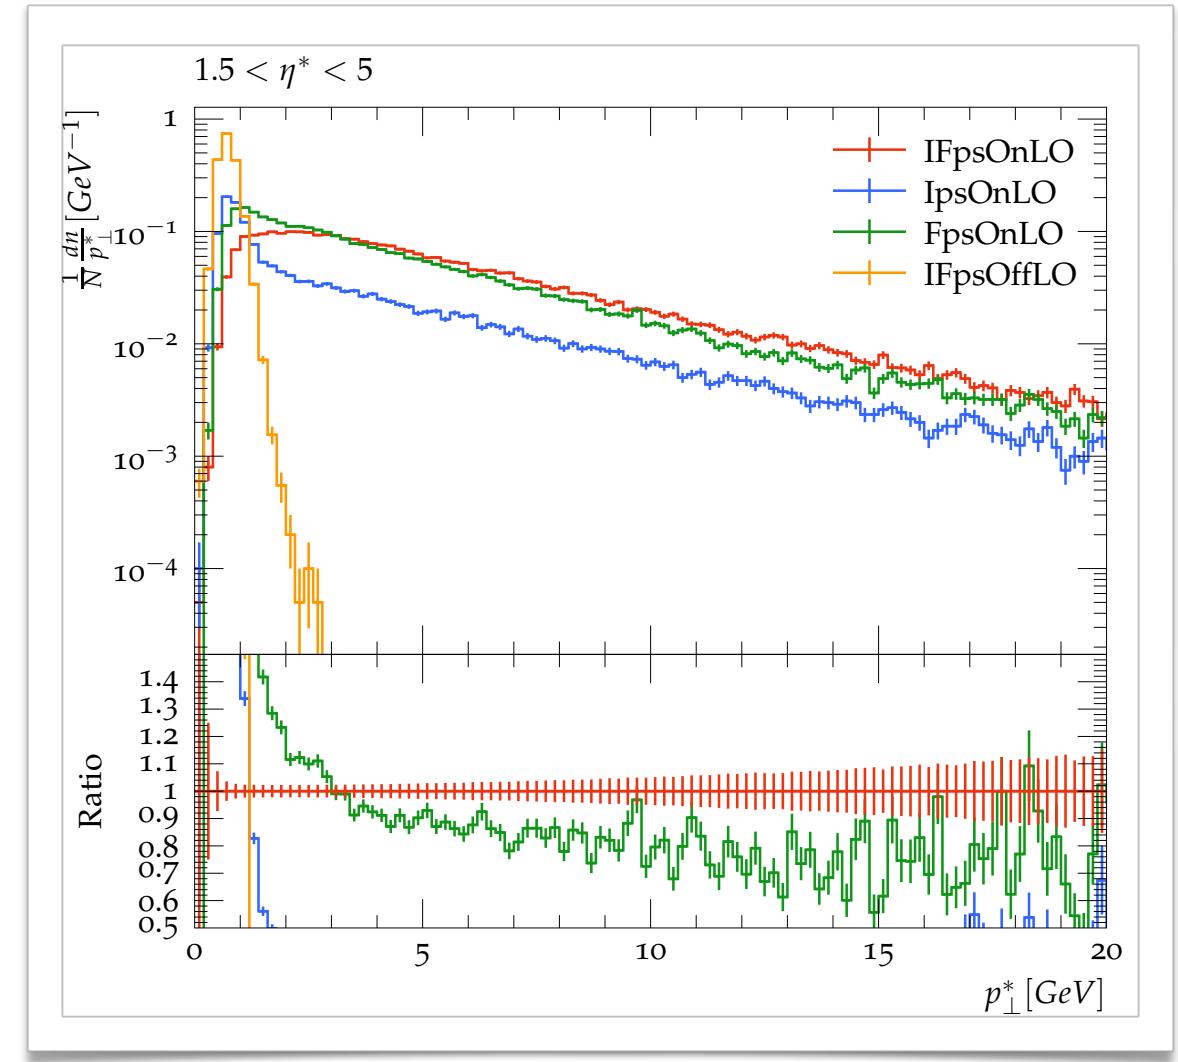

Kt : Intrinsic Transverse Momentum

Part II Simulation

A Higher Resolution by using RAPGAP

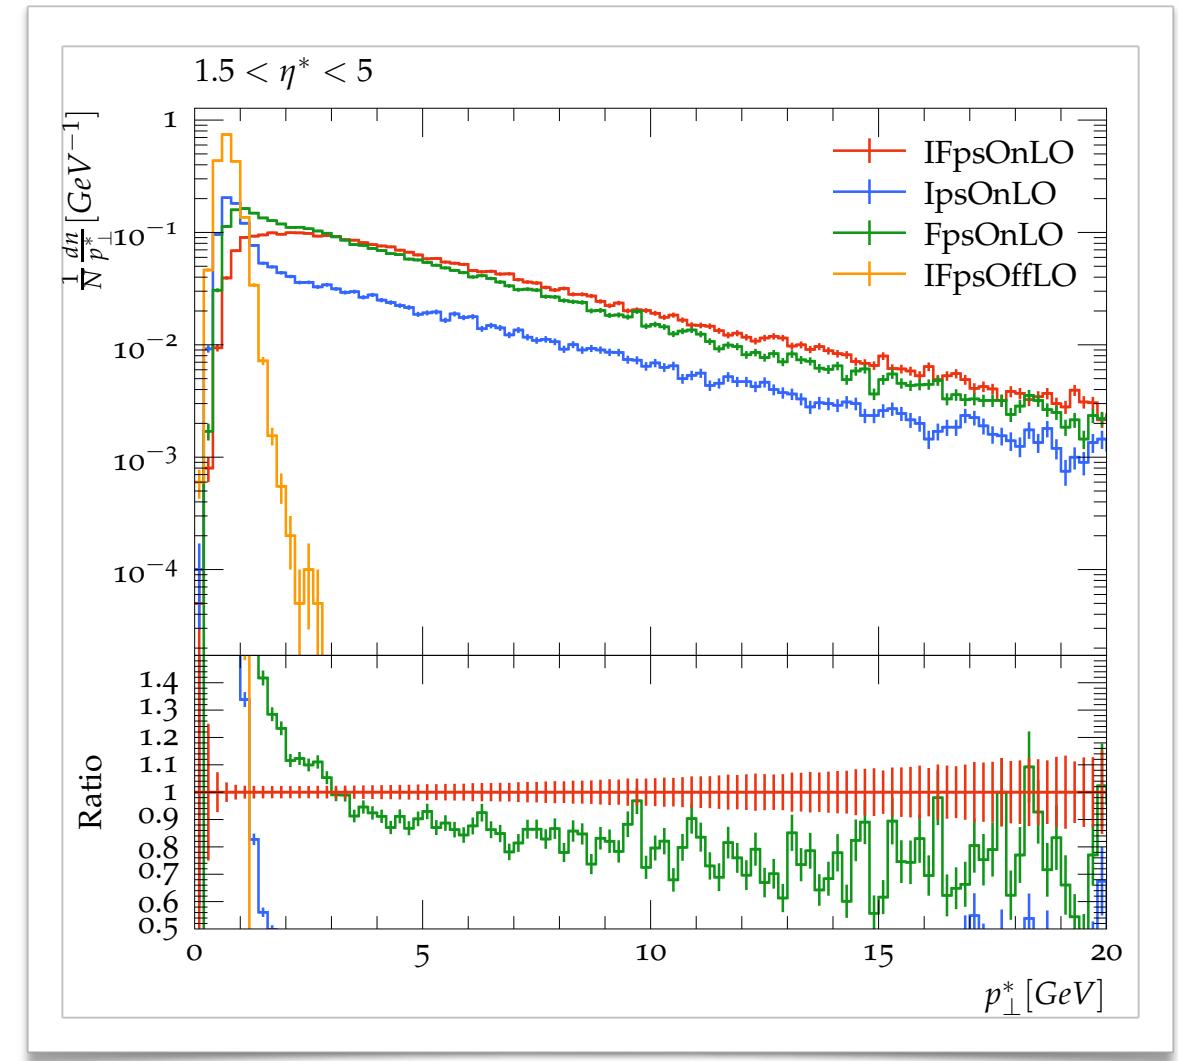

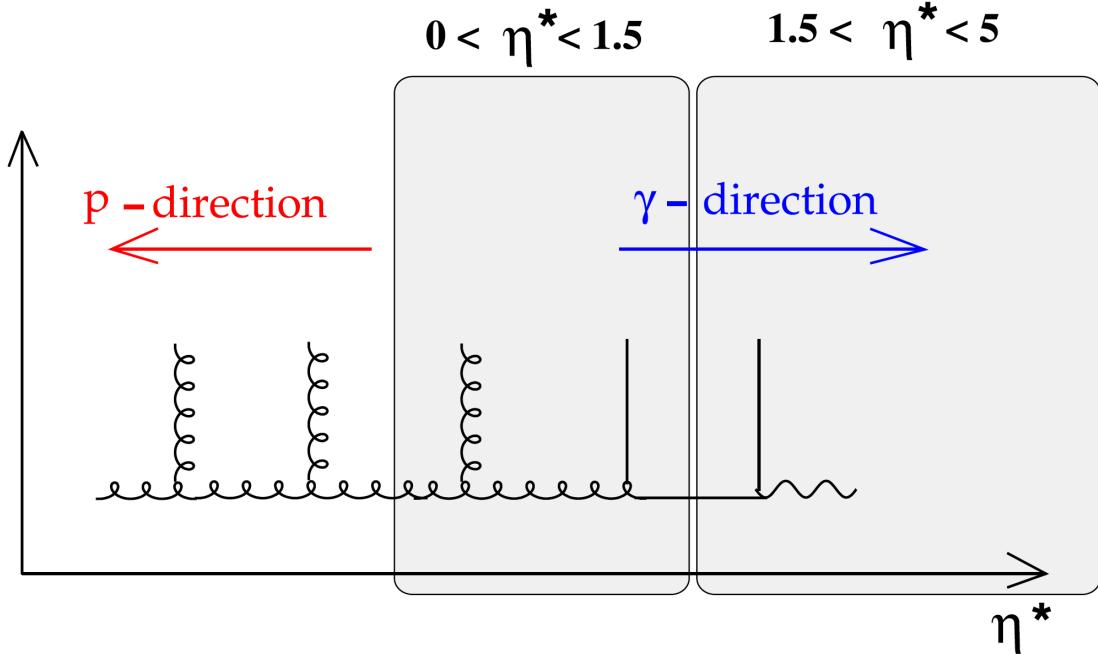

Resolution Scale : $10000 < Q^2 < 20000 \text{ GeV}^2$
Positron energy : 300 GeV^2
Proton energy : 8000 GeV^2
PDF : CTEQ6L(LO)

Part II Simulation

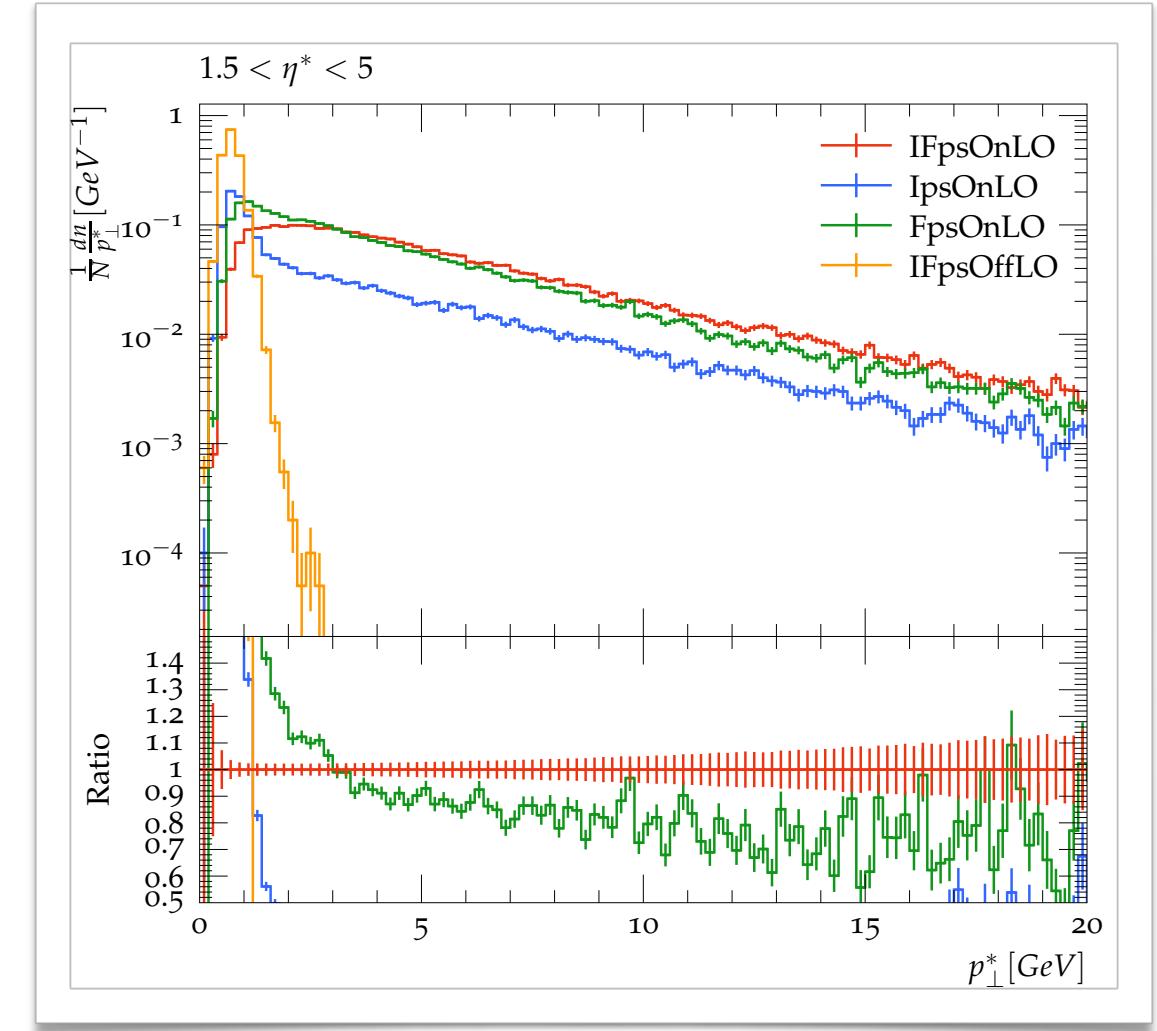

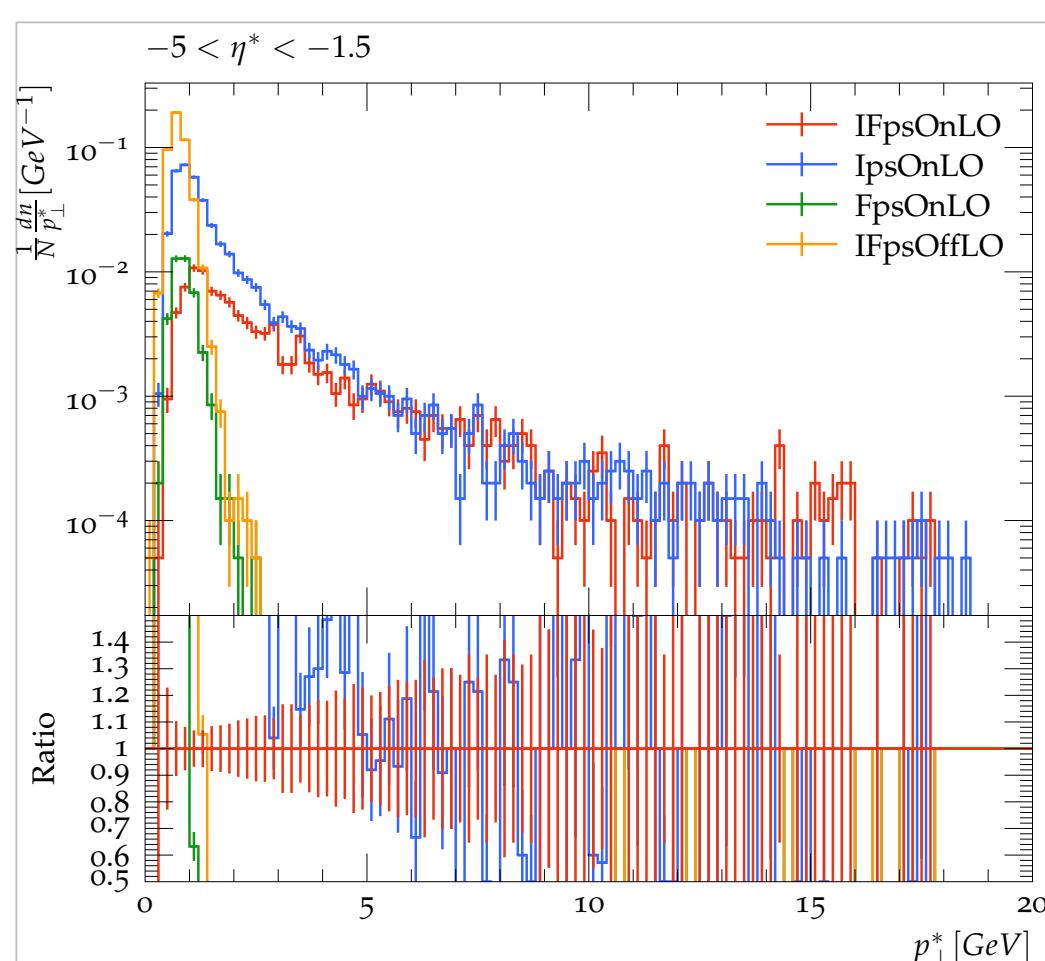

A Higher Resolution by using RAPGAP

Resolution Scale : $10000 < Q^2 < 20000 \text{ GeV}^2$
Positron energy : 300 GeV^2
Proton energy : 8000 GeV^2
PDF : CTEQ6L(LO)

Part II Simulation

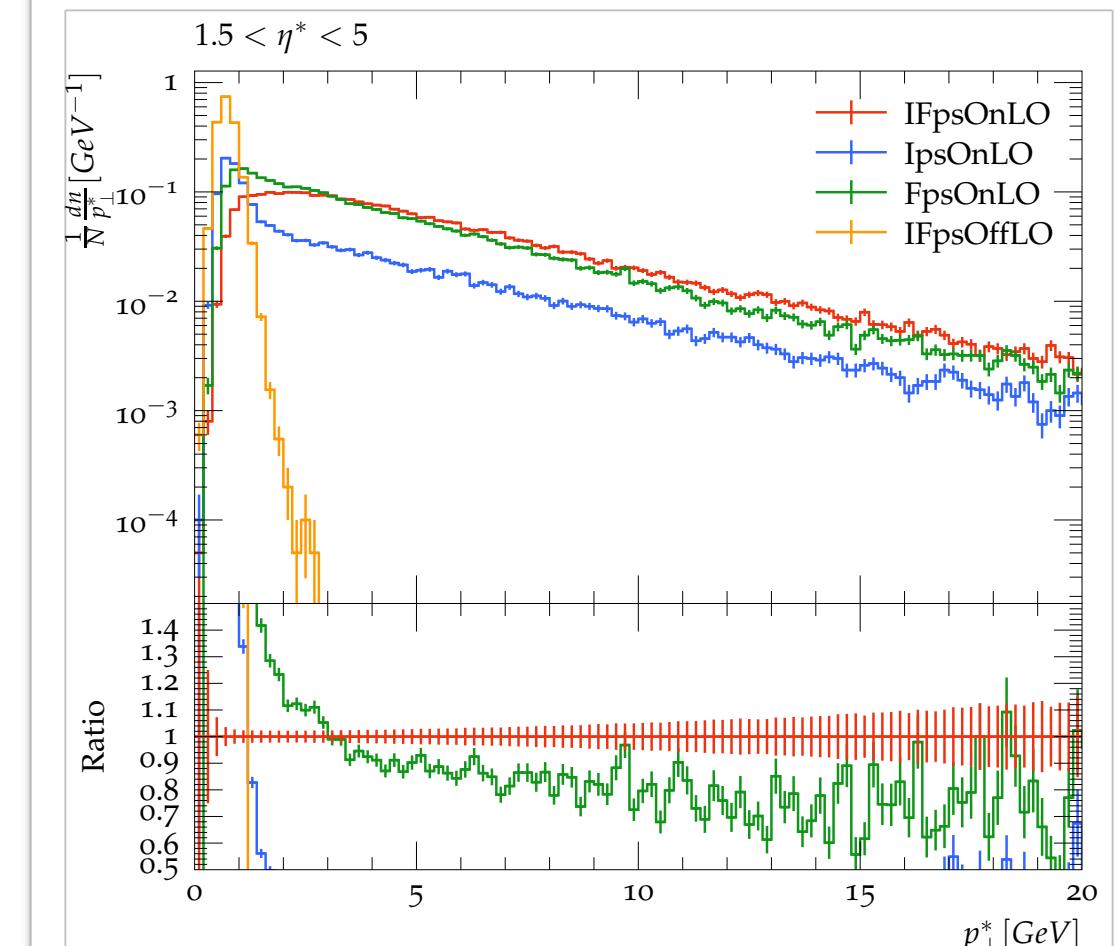

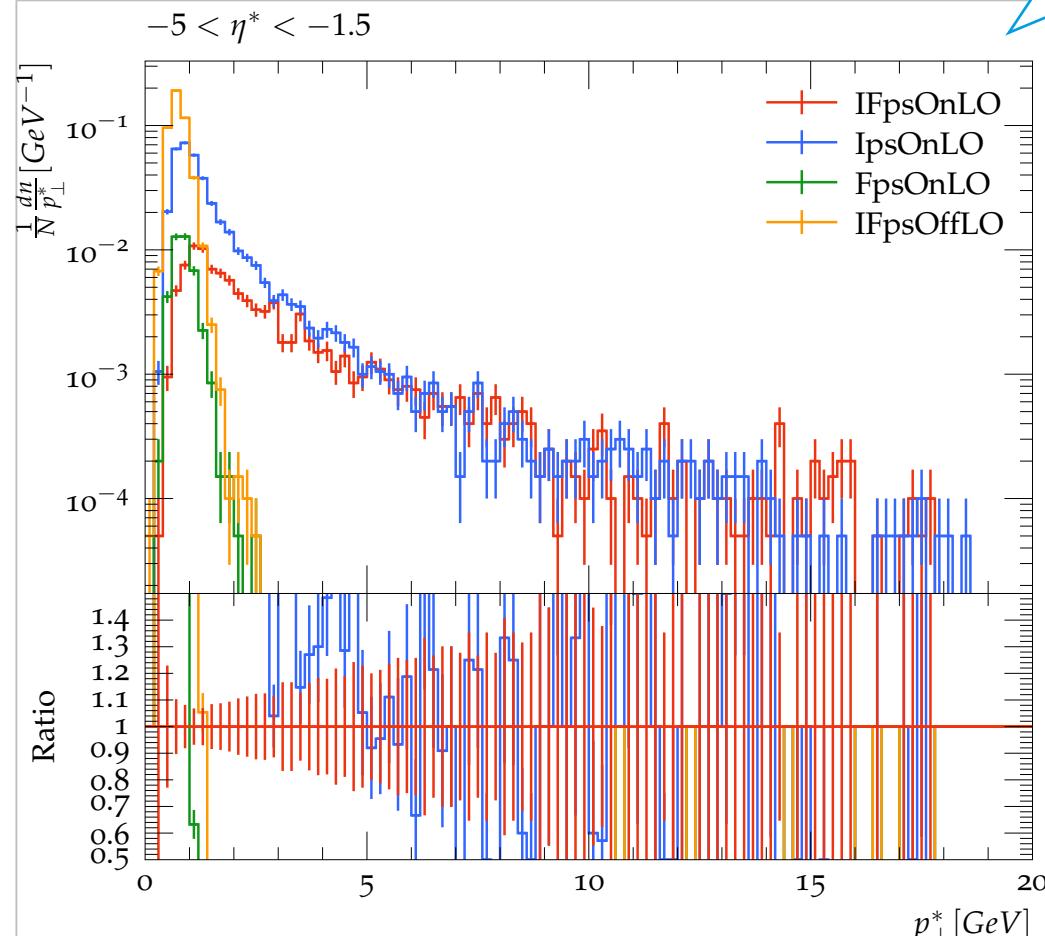

A Higher Resolution by using RAPGAP

Part II Simulation

A Higher Resolution by using Rapgap

This could not be observed by HERA

Part III Conclusion

Summary

We can reconstruct the charge particles spectrum by the effect of Intrinsic transverse momentum, Parton shower, and Fragmentation.

We see the behaviour of intrinsic K_t , Parton shower separately at large Q^2 .

We expect that we can study these behaviour at LHeC around 60 GeV and 7000GeV for electron and proton beam respectively.

Thank you for your
