

MTCA.4 Workshop 2014
Virtex-7 FPGA carrier
From 10 MHz to 2.6 GHz

A new range of signal processing MTCA.4 boards dedicated to high energy physics

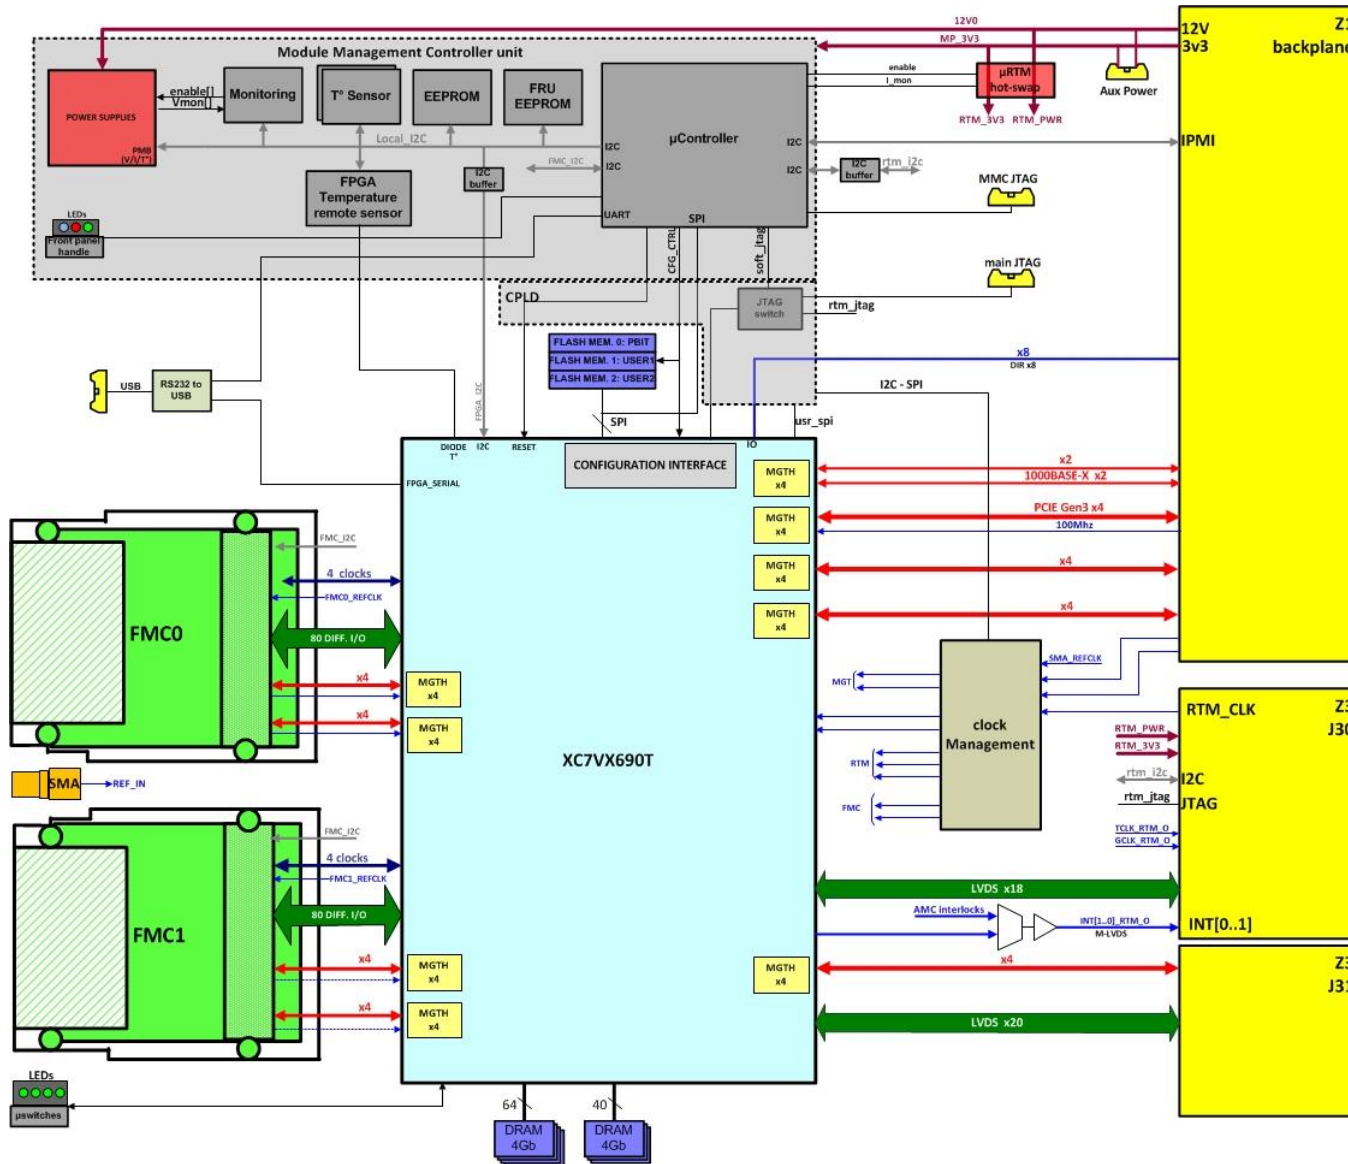

- The same carrier board for sampling from 10 MHz to 2,6 Gb/s
- Only one set of FPGA Reference Designs and Example Designs for easy development (DMA Engine)
- 8 channels per MTCA.4 slot -> competitive solution on cost per channel

- **MTCA.4 Double –width mid-size Advanced Mezzanine Card form factor**
- **One XILINX VIRTEX -7 XC7VX690T (or XC7VX330T)**
- **Two DDR3 memory banks (first 64 bits wide 2GB and second 40 bits wide 1,25 GB) with up to 1800 MT/s**
- **Two VITA57.1 HPC FMC slots each one having 4*clocks, 80*differential pairs and 8*Multi-gigabit transceivers (12 Gb/s)**
- **To the backplane:**
 - **16*FPGA Multi-gigabit transceivers on Z1 (12 Gb/s)**
 - **38*LVDS and 4*FPGA Multi-gigabit transceivers on Z3**
- **On board flash memory for FPGA configuration (3*256Mb SPI Mirror flash each for an FPGA image)**
- **One Module Management Controller (IPMI, FPGA configuration, on-board monitoring)**

ADC-FMC
covering from 10 MHz to 2,6 GHz

- **A/D/A Converters :**

- IC-ADC-FMCa unit : Quad 16-bit, 135MSPs
- IC-ADC-FMCb unit : Quad 14 bit, 400 MSPs (or Quad 12 bit, 500 MSPs)
- IC-ADC-FMCc unit : Quad 12 bit, 1.4GSPs (Q2/14)
- IC-ADA-FMCa unit : Dual DAC / Dual ADC 12-bits 1GSPs (TBC)
- IC-DAC-FMCa : quad 16-bit 800MSPs
- IC-DAC-FMCb : quad 16-bit 1GSPs

IC-ADC-FMCa

IC-ADC-FMCb

- **IO Modules :**

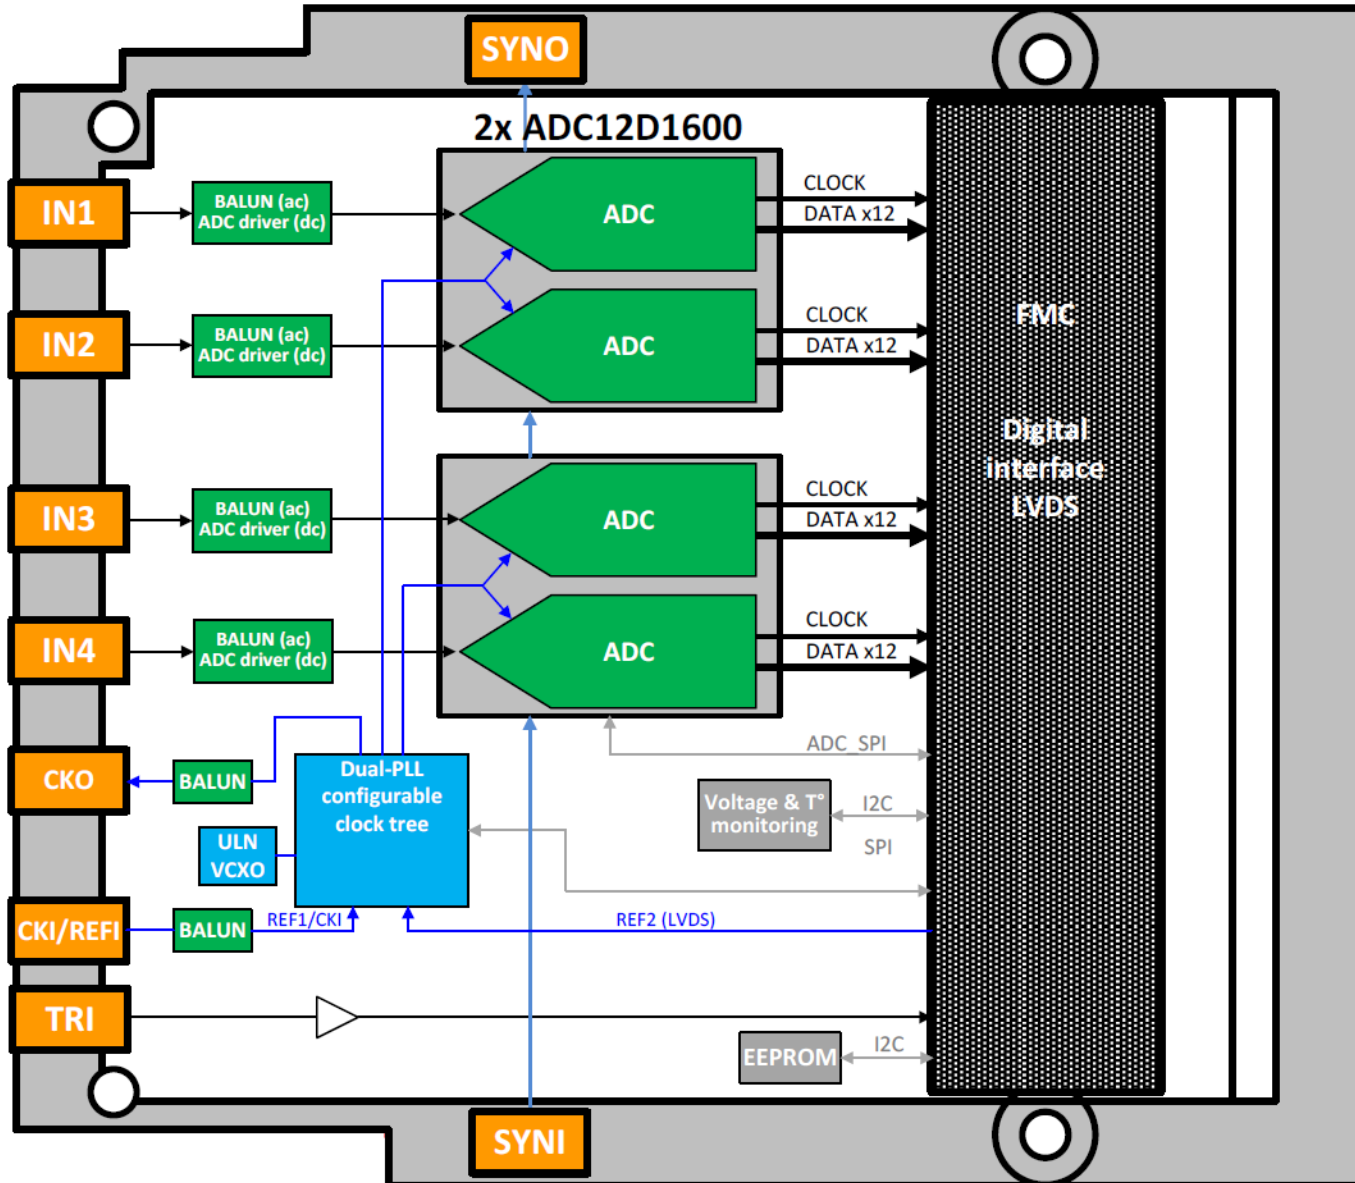

- IC-IO-FMCa : Dual SFP+ ports

IC-ADC-FMCc

IC-DAC-FMCa

- Four channels using two ADC12D1600. Single width, High Pin Count FMC
- Full scale amplitude : 0,8 V peak to peak. Analog input bandwidth: 5-2200 MHz
- SSMC connectors. 50Ω, AC coupled
- On board clock tree, based on a dual PLL.
- Clocking options:
 - use front panel input (CKI) for ADC sampling,
 - generate sampling clock from reference clock input (REFI) from front panel,
 - generate sampling clock from reference clock input from FMC connector (carrier board)
- One clock output
- One trigger input (DC coupled LVPECL buffered and LVDS output to the carrier)
- Performance very close to the performance of the TI 12D1600 ADCs, that proves the quality of design of the FMC
- Power dissipation 12W
- Run on IC-FEP-VPX3c, IC-FEP-VPX6b and IC-FEP-TCAa
