NAF-2: ATLAS Status

> NAF-2 issues and to-do's

- Native cvmfs mounts are now requested on all our NAF-2 working group servers, tests being carried by IT on cvmfs-over-nfs?

- Some batch queue instabilities this month, issues reported to bird.service@desy.de

- Migration to group-based location and plain naming scheme for xxl directories to come?

- May request to move more of our wgs to SLD6 soon, not yet clear if this fits with all users

- Need to restart my dCache monitoring scripts (DESY-HH/ZN_LOCALGROUPDISK), needs autoproxy feature for dq2, work underway – thanks!

> NAF-1 is over. No emergencies, users ready for the change

- A few requests for copy of NAF-1 afs data to NAF-2, works ok. Group data has been backed up to the desy.de afs cell

- 26 Sonas directories (next page) remain in the NAF-1 namespace (further 2 were moved after the June deadline), no plans to migrate this data. Total of 35 TB allocated quota could be re-used.. is there an IT plan? I would be happy to delete this data.. but..

26 remaining ATLAS Sonas dirs in NAF-1 namespace

> A mixture of summer students and expired users

> Mostly 1 TB quota (21/26), but one** 2 TB and four**** 3 TB

> Total of 35TB in assigned quota – could be freed up?
