

Workshop closing

Matthew Wing (UCL/DESY/UHH)

- Lots of good talks, physics discussions and ideas. Thanks to all who contributed.
- A reminder that we will write, with the help of the speakers, a summary document. We definitely need something from the workshop and not just go home.
- A reminder of the possibility of outside people and institutes contributing to HERA analyses. Interesting physics, author on paper(s), conference talk(s), etc..
- Need to think of what next in terms of how we carry out these research topics :
 - We probably cannot do everything that was mentioned, but we should try and do as much as possible.
 - Be creative, look at alternate ways to get resources.
 - ▶ E.g. a joint application of theorists and experimentalists for a project grant.
 - ▶ Combining person power with other facilities, such as EIC, LHC, etc..
 - ▶ A Masters student can produce a paper. A PhD student can produce a lot of very interesting physics.
 - ▶ Other ideas how we can work on the HERA programme ... ?
