

## Moduli Spaces of AdS Vacua in $d=7$ , $N=2$ Supergravity

*Monday 16 March 2015 15:20 (20 minutes)*

We discuss AdS vacua of  $N=2$  gauged supergravity in seven dimensions. We classify the possible gauge groups which lead to maximally supersymmetric AdS vacua and show that the moduli spaces of these backgrounds can consist only of isolated points.
