

# Introduction

- Next AMS submission: Had more discussions with pixel people. Will likely have a separate engineering run from them (still combined with other projects).
- There will be submissions to L-foundry. This is not in our plans. But it seems there would be a possibility to submit our structures if the community is interested. Had inquiries from pixel community and Ivan, and SLAC. Of course, this would involve some resources from the strip community: design, fabrication cost, evaluation.
- We'll go for gamma irradiation of AMS-CHESS chip (done by Sally Seidel's team) in the near future. Targeting the dose range up to 100 Mrad. This brings a couple of points:
  - Would be good to get ~4 more bare dies this week...
  - Is anybody else interested in irradiating more chips?
