The UFTP data transfer suite

Wednesday 25 March 2015 14:15 (20 minutes)

UFTP is a high-performance data transfer library that combines ideas from passive FTP with a flexible security layer and user mapping, providing a powerful solution to many data transfer issues. UFTP can be integrated very flexibly into existing security infrastructures and applications. This demonstrator will showcase the UFTP tools in several scenarios such as data upload/download, file synchronization and data sharing.

Presenter: Dr SCHULLER, Bernd (Jülich Supercomputing Centre)
