Publication Repository - A basic KIT Data Manager Demonstration

Wednesday 25 March 2015 13:45 (30 minutes)

KIT Data Manager is a software architecture for building up repositories for research data. The generic service stack provides enough flexibility to support various scientific communities and use cases in a modular and extensible way. Apart from vertical, community-specific repositories KIT Data Manager can also be used to setup horizontal repositories for generic use cases.

This demonstration will present how to setup a repository for managing publications and accompanying data using the KIT Data Manager service stack. It will show the underlying architecture, necessary extensions to KIT Data Manager basic services, how the repository can be used and how it can be obtained and installed.

Presenter: Mr JEJKAL, Thomas (KIT)
