

Asset and Maintenance Management at DESY

Monday 12 October 2015 10:15 (30 minutes)

DESY is operating a variety of accelerators for more than 50 years now. Therefore asset and maintenance management at DESY has, among others, to deal with some old, but robust components from the 1960ties. At the same time DESY is building up a brand new accelerator, the European XFEL, in an international collaboration, with brand new components from different vendors from different countries. Obviously the amount and quality of the documentation of these different generations of components differs widely. This talk will give an overview of the accelerators at DESY and describe the way asset and maintenance management is organized at DESY.

Primary author: BIELER, Michael (DESY)

Presenter: BIELER, Michael (DESY)

Session Classification: Opening Session

Track Classification: Maintenance requirements, strategies and business processes
