

Automatic meter readings transfer between supervision system and CMMS

Wednesday 14 October 2015 10:10 (20 minutes)

Lots of assets are operated or at least monitored from an operative point of view through supervisions systems at CERN. In parallel lots of assets are maintained through CMMS which need inputs from the supervision system to be efficient (e.g. number of cycles, of working hours ...). This presentation will show how we managed, via a pilot project, to connect both tools and the perspectives for the future.
