

Schedule

- There is a new understanding of remaining work before the CHES-2 AMS submission schedule from the designers.
- Tried to call for a design review for this week. This was clearly too early.
- New suggestion is review after AUW.

Doodle poll is here: <http://doodle.com/w7p7bc28yczuz6a6>

The preference from designers and reviewers external to the project is for either Monday, April 27th, at 17:00 CERN time.

Or for Monday, May 4th, at either 17:00 or 18:00 CERN time.

The review is open to the entire community. If you'd like to participate, please vote!

Note this is the 1st review, not the last.

AUW

- Together with pixels, we have 2 sessions on Wednesday afternoon: 14:00 – 15:30 and 16:00 – 18:00 .
- Need to make the agenda soon, i.e. “now”.

We had one request already: Julie Segal (SLAC), on TCAD simulations for strips (AMS-350) and pixels (Lfoundry-150).

Schedule at the ITK week and suggestions (?=“uncertain”, +=“keep”, -=“remove”):

- ?Overview
- -Device and Gamma measurements
- +Neutron measurements
- +Proton measurements
- ?Gamma measurements
- +CHESS-2 architecture
- +Discussion

TWEPP

- At the last meeting we agreed to submit a general abstract to TWEPP conference.
- We can figure out who is going later. But we already have volunteers.
- The abstract deadline is April 30th.
- ≤ 100 words for the abstract; ≤ 500 words for the summary.
- Suggest to write and circulate the abstract this week, to confirm the submission at the next meeting, April 28th.
