

NAF Status report

Yves Kemp
NUC 15.4.2015

Operations

> /tmp full

- One user writing directly into it
- No clean up ... and large amounts of data
- Implementing a check-script that can also manage job and data deletions

NIS -> LDAP Migration

- > LDAP running on all SL6 BIRD nodes
- > Running on all ATLAS and CMS SL6 WGS
- > Problem: af-cms group is growing too large for NIS
 - Preventing *any* registry change to be pushed to NIS
 - Manually truncating af-cms in NIS
 - SL5 nodes (WGS and WNs) still using NIS, no plan to change them to LDAP
- > ... asking again for the SL5 plans
 - One option could be that af-cms@NIS only would contain people needing access to SL5 resources

Misc

> PRC

- Computing talk on 11.5. Speaker t.b.d.
- Preparatory meeting 28.4. @14:30
- Topics?

Batch and monitoring

- > Still working on the large memory plots (see last NUC)
 - Again some large memory consumption jobs
- > In the process of doing these plots: Worked on the order and the colors of the projects in bird.status
