

> “sh: psql: command not found”

- postgresQL client was not installed on nodes added recently

→ “Reference” node with the default software for tests?

→ Reference list of additional software (boost, psql, ...) that will be installed on new nodes?

## > dCache update and error:

- “hardware problem affecting one Belle [...] pool[s]”  
→ took five days to get new hardware
- Last monday: “NFS: Got error -10052 from the server on DESTROY\_SESSION. Session has been destroyed regardless...”  
→ Communication only as reaction upon mail

- /tmp full on some nodes, PYTHON crashes, essentially prevents using Belle II software:

e.g. bird227.desy.de

Filesystem	1K-blocks	Used	Available	Use%	Mounted on
/dev/sda3	9948012	9419648	16364	100%	/

close failed in file object destructor:  
sys.excepthook is missing  
lost sys.stderr
