

- Apparently random crashed of Belle 2 software:  
“ SysError in <TFile::ReadBuffer>: error reading from  
file /pnfs/desy.de/belle/DESY/belle2/bkg/Coulomb\_LER\_100us.root  
(Bad file descriptor)”
- → Client wants to re-use existing mover, but  
requests is rejected by pool (i.e. two jobs from one  
node wants to read the same file)
- Need update to 2.12.8., workaround: Files on SONAS

**Thanks to Tigran for the great help!**
