## Production of a forward J/Psi and a backward jet at the LHC

*Wednesday, April 13, 2016 5:10 PM (15 minutes)*

J/Psi mesons are copiously produced at the LHC. Inspired by the Mueller Navelet jet studies, we propose to consider the production of a forward J/Psi accompanied by a backward jet. We make a feasibility study for this process and we compute the leading order differential cross section for such events in the BFKL framework.
