Measurements of the top-quark properties in the production and decays of $t\bar{t}$ events at CMS

Wednesday, April 13, 2016 9:40 AM (15 minutes)

Measurements of several top-quark properties are presented, obtained from the CMS data collected at various centre-of-mass energies. The results include measurements of the top pair charge asymmetry, the W helicity in top decays, the top quark charge, the $t\bar{t}$ spin correlation, of the top polarisation and the search for anomalous couplings. The results are compared with predictions from the standard model as well as new physics models. The cross section of $t\bar{t}$ events produced in association with a W , Z boson or a photon is also measured.

Primary author: Prof. CMS, Collaboration (CINCO)

Presenter: POYRAZ, Deniz (Ghent University in Ghent, Belgium)

Session Classification: WG4 Heavy Flavours

Track Classification: Heavy Flavours (Charm, Beauty and Top)
