Distributions of charged particles at 13 TeV with CMS

Thursday, 14 April 2016 12:20 (15 minutes)

Pseudorapidity and transverse momentum distributions of charged-particles produced in pp collisions at 13 TeV will be presented for different event categories: an inclusive, inelastic enhanced, SD enhanced and NSD enhanced event samples. The measurements are compared to MC predictions tuned to describe the Underlying Event properties at 7 TeV.

Primary author: Prof. CMS, Collaboration (CINCO)

Presenter: Mr GRADOS LUYANDO, Juan Manuel (DESY)

Session Classification: WG5 Small-x and Diffraction

Track Classification: Small-x, Diffraction and Vector Mesons
