## Distributions of charged particles at 13 TeV with CMS

*Thursday, April 14, 2016 12:20 PM (15 minutes)*

Pseudorapidity and transverse momentum distributions of charged-particles produced in pp collisions at 13 TeV will be presented for different event categories: an inclusive, inelastic enhanced, SD enhanced and NSD enhanced event samples. The measurements are compared to MC predictions tuned to describe the Underlying Event properties at 7 TeV.

**Primary author:** Prof. CMS, Collaboration (CINCO)

**Presenter:** Mr GRADOS LUYANDO, Juan Manuel (DESY)

**Session Classification:** WG5 Small-x and Diffraction

**Track Classification:** Small-x, Diffraction and Vector Mesons
