

# Automata Processing

## Summary

Ke Wang<sup>1</sup> (Research Scientist of CAP)

Matt Tanner<sup>2</sup>

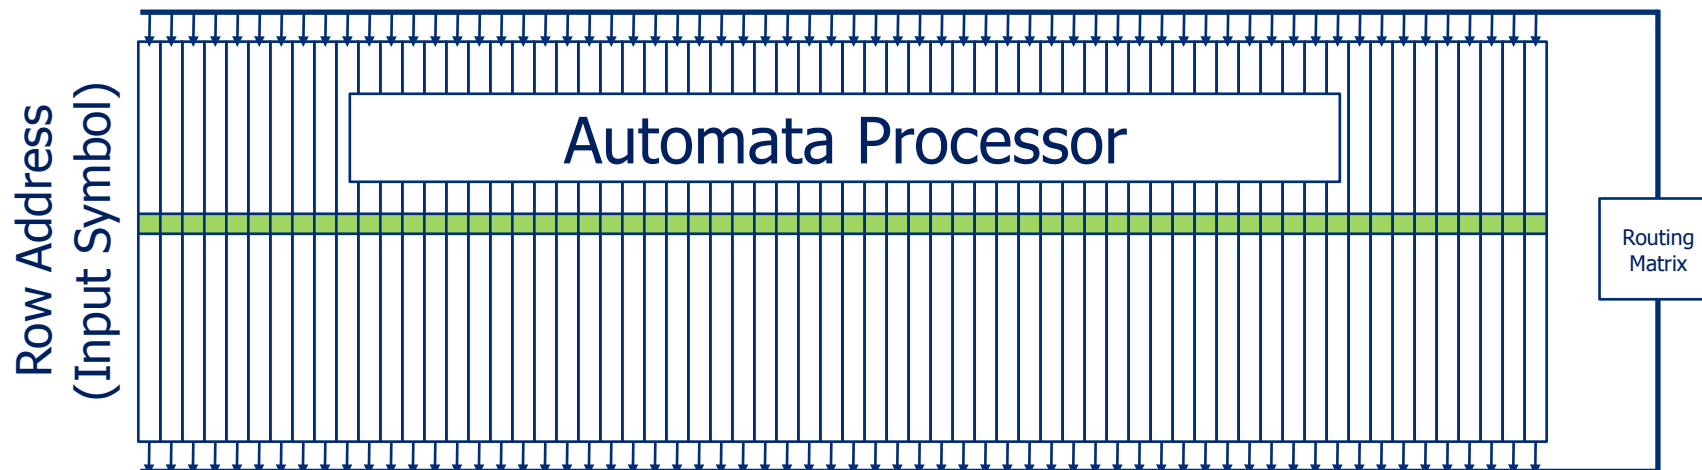

Kevin Skadron<sup>1</sup> (Center Director of CAP)

Mircea Stan<sup>1</sup> (Assoc. Director of CAP)

<sup>1</sup> University of Virginia

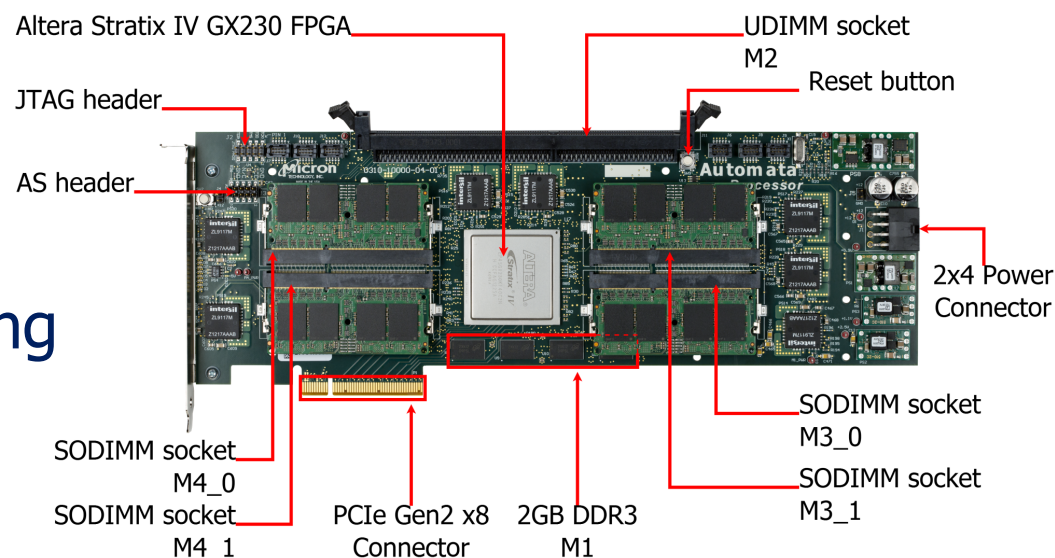

<sup>2</sup> Micron Technology Inc.

# Architecture of the AP

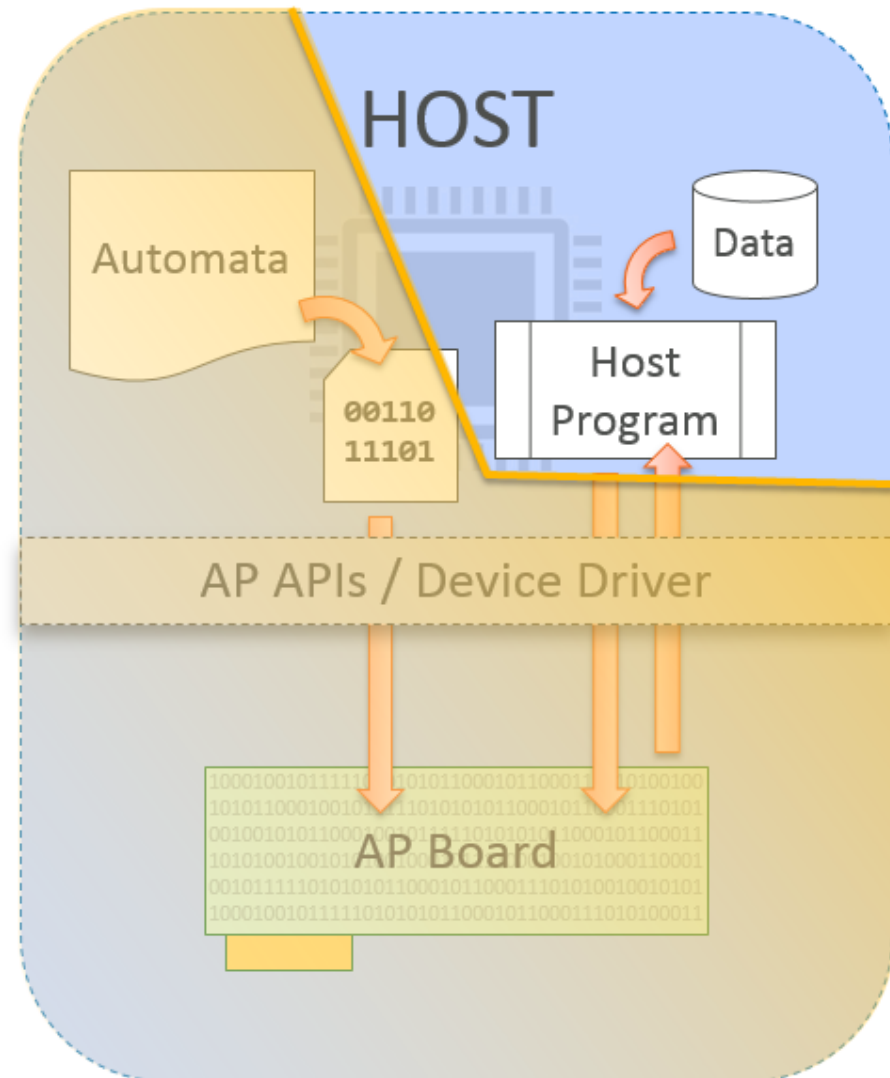

Row Access results in **49,152** match & route operations  
(then Boolean AND with "active" bit-vector)

- Implements NFAs natively in hardware
- Non-determinism very powerful for fuzzy matching
- Massive parallelism

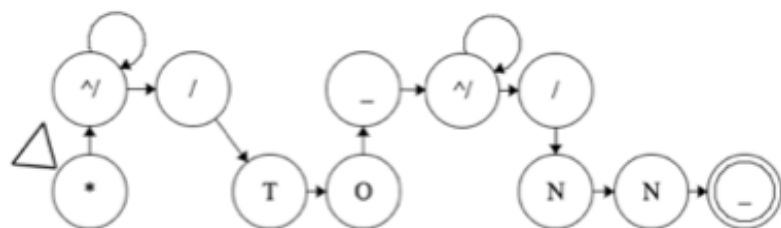

# Programming on the AP

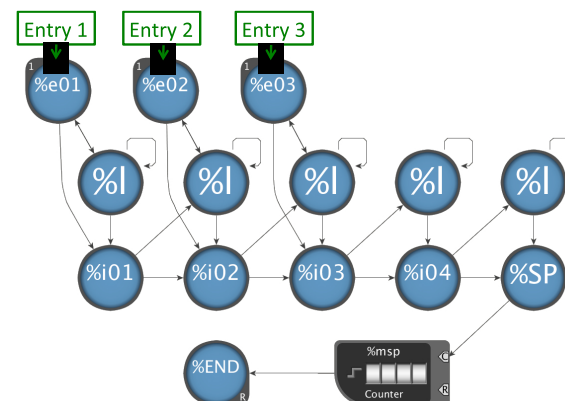

- ▶ APIs
  - Design API
  - Compiler API
  - Runtime API
  - Application-specific APIs
- ▶ Workbench
- ▶ Command-line tools
- ▶ Device driver

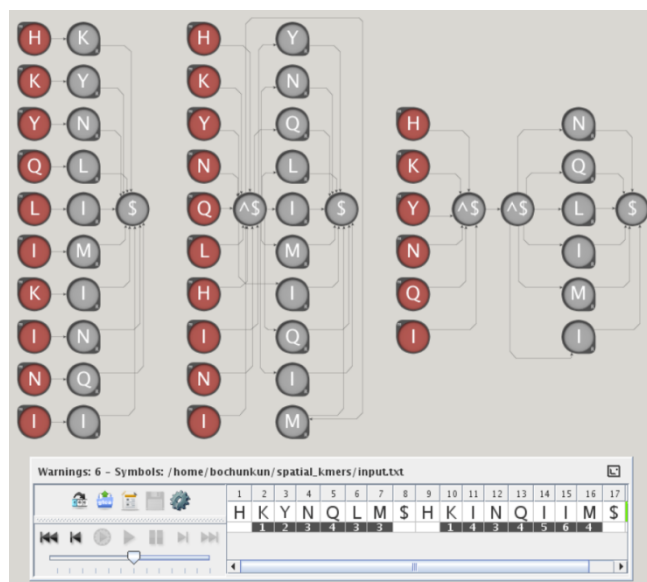

# Applications

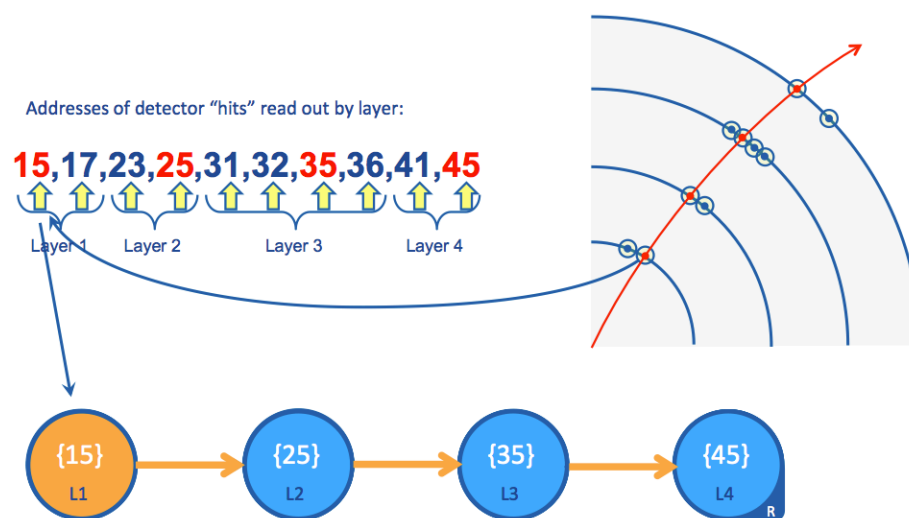

Brill Tagging

Association rule mining

DNA motif search

Particle track detection in HEP

# Summary

- ▶ The AP is a powerful new accelerator for symbolic pattern matching
- ▶ A variety of applications map well to this paradigm
  - Lots of opportunities to transform “big data” applications
- ▶ Rich opportunities for research

# Thanks for your attention!
