- 3. The ZEUS MVD telescope**
- 4. Data Acquisition (DAQ)**
- 5. Results**
- 6. Outlook**

Introduction

1. Introduction

2. The testbeam

3. The ZEUS MVD telescope

4. Data Acquisition (DAQ)

5. Results

6. Outlook

Introduction

the ZEUS MVD telescope in test beam chamber 22

testbeams essential in:

- research**
 - developement**
 - and commissioning**
- of HEP detectors**

at DESY:

**6 GeV electron testbeam
facility and infrastructure**

The testbeam

1. Introduction
- 2. The testbeam**
3. The ZEUS MVD telescope
4. Data Acquisition (DAQ)
5. Results
6. Outlook

The testbeam

test beam generation at DESY

The ZEUS MVD telescope

1. Introduction
2. The testbeam
- 3. The ZEUS MVD telescope**
4. Data Acquisition (DAQ)
5. Results
6. Outlook

A new DAQ for the ZEUS MVD telescope

The ZEUS MVD telescope

the ZEUS MVD telescope in test beam chamber 22

A new DAQ for the ZEUS MVD telescope

The ZEUS MVD telescope

MVD telescope, side view

The ZEUS MVD telescope

The telescope detector planes

the telescope detector planes

- each provides 3 space coordinates
- 2 single sided silicon sensors each
- strip pitch: 25 μm
- readout pitch: 50 μm
- intrinsic resolution: < 15 μm

A new DAQ for the ZEUS MVD telescope

The ZEUS MVD telescope

The telescope trigger system

the telescope trigger system

- 3 plastic scintillators with PMTs
- signals combined with AND coincidence logic

trigger coincidence logic and external trigger

A new DAQ for the ZEUS MVD telescope

The ZEUS MVD telescope

The data acquisition Hardware

VME crate with several modules:

VME crate with modules

The ZEUS MVD telescope

The data acquisition Hardware

VME crate: V550 ADC modules

VME crate with several modules:

- 2x V550A ADC modules

The ZEUS MVD telescope

The data acquisition Hardware

VME crate: V551B sequencer module

VME crate with several modules:

- 2x V550A ADC modules**
- V551B sequencer module**

The ZEUS MVD telescope

The data acquisition Hardware

VME crate: CETIA single board computer

VME crate with several modules:

- 2x V550A ADC modules**
- V551B sequencer module**
- CETIA single-board computer**

Data Acquisition (DAQ)

1. Introduction
2. The testbeam
3. The ZEUS MVD telescope
- 4. Data Acquisition (DAQ)**
5. Results
6. Outlook

Data Acquisition (DAQ)

- **C++ program(s)**
- **run on the CETIA single-board computer in the VME crate**
- **read out data from V550A modules**
- **store the data in binary data files on disk**

The DAQ program user menu

```
=====
=                                     =
=   DAQ for silicon MVD telescope   =
=                                     =
=====
R - Start Run
D - Start Run in the display mode
A - Calibration with the auto trigger
E - Calibration with the external trigger
Z - Set pedestals and thresholds to 0
Q - Quit
>
```

Data Acquisition (DAQ)

The DAQ program user menu

```
=====
=                                     =
=   DAQ for silicon MVD telescope   =
=                                     =
=====
R - Start Run
D - Start Run in the display mode
A - Calibration with the auto trigger
E - Calibration with the external trigger
Z - Set pedestals and thresholds to 0
Q - Quit
>
```

Run mode

- starts DAQ run
- writes ADC data to binary file

Data Acquisition (DAQ)

The DAQ program user menu

```
=====
=                                     =
=   DAQ for silicon MVD telescope   =
=                                     =
=====
R - Start Run
D - Start Run in the display mode
A - Calibration with the auto trigger
E - Calibration with the external trigger
Z - Set pedestals and thresholds to 0
Q - Quit
>
```

Display mode

=> later

The DAQ program user menu

```
=====
=                                     =
=   DAQ for silicon MVD telescope   =
=                                     =
=====
R - Start Run
D - Start Run in the display mode
A - Calibration with the auto trigger
E - Calibration with the external trigger
Z - Set pedestals and thresholds to 0
Q - Quit
>
```

Calibration mode

- resets ped & threshold memory
- data taking (1000 events)
- no beam, only background
- calculates ped & threshold
- rewrites ped & threshold memory

Data Acquisition (DAQ)

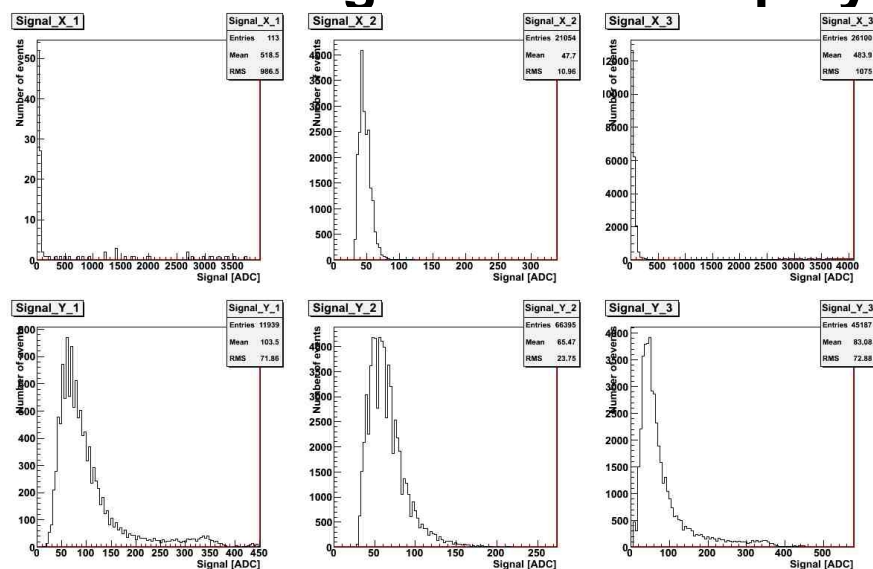

The display run mode

3 approaches:

The display run mode

3 approaches:

- 1st:
 - write a display file every 10 events
 - read out display file with ROOT-based program
 - create ROOT histograms with display data

Data Acquisition (DAQ)

The display run mode

3 approaches:

- 2nd: - use network access (sockets)
 - send data of every 10th event to client
 - client program creates ROOT histograms

=> issue: major bug, not found yet

=> but: could be best solution

The display run mode

3 approaches:

- 3rd: - use built-in ASCII histogram option of DAQ
- create histograms for every 10th event

```
Xscale: nbin=1920 sum_bin=30
Title: Planes 1-3, Y
Entry=159, Max36(36), Mean=642,54, RMS=360,73

 33 I      X      X      X
 30 I      X      X      X
 27 I      X      X      X
 24 I      X      X      X      X
 21 I      X      X      X      X
 18 I      X      X      X      X
 15 I      X      X      X      X
 12 I      X      X      X      X      X
 9  I      X      X      X      X      X
 6  I      X      X      X      X      X
 3  I      X      X      X      X      X
012345678901234567890123456789012345678901234567890123456789
0      300      600      900      1200      1500      1800
```

ASCII histogram output

Results

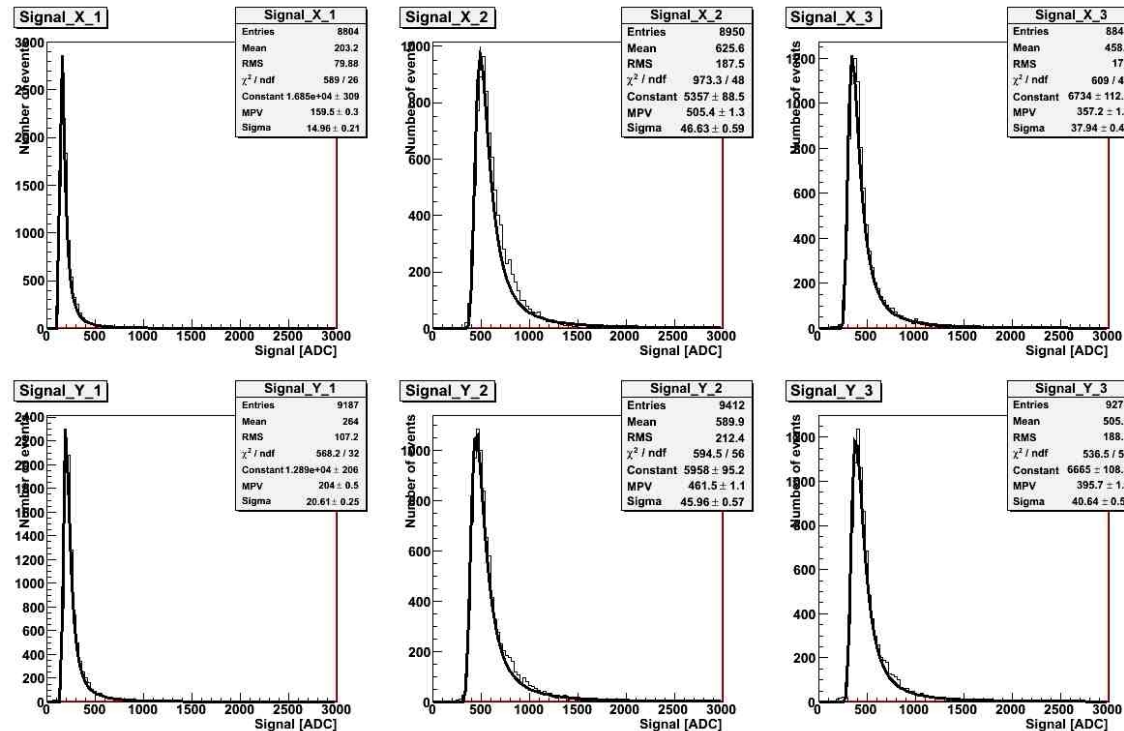

1. Introduction
2. The testbeam
3. The ZEUS MVD telescope
4. Data Acquisition (DAQ)
- 5. Results**
6. Outlook

Results

- **analysis of binaries with ROOT-based analysis program**
- **multiple options:**

Results

- analysis of binaries with ROOT-based analysis program
- multiple options:
landau distribution fits

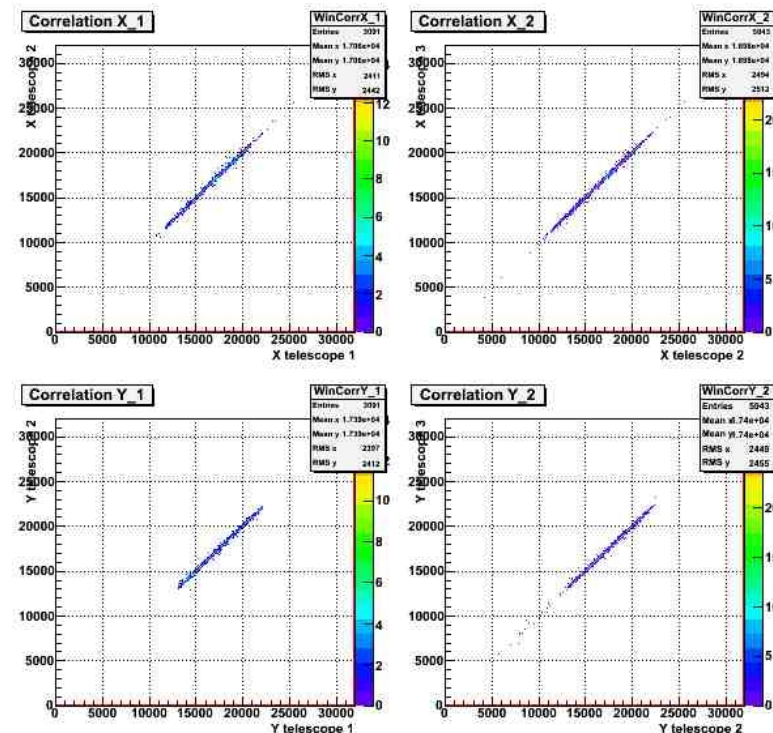

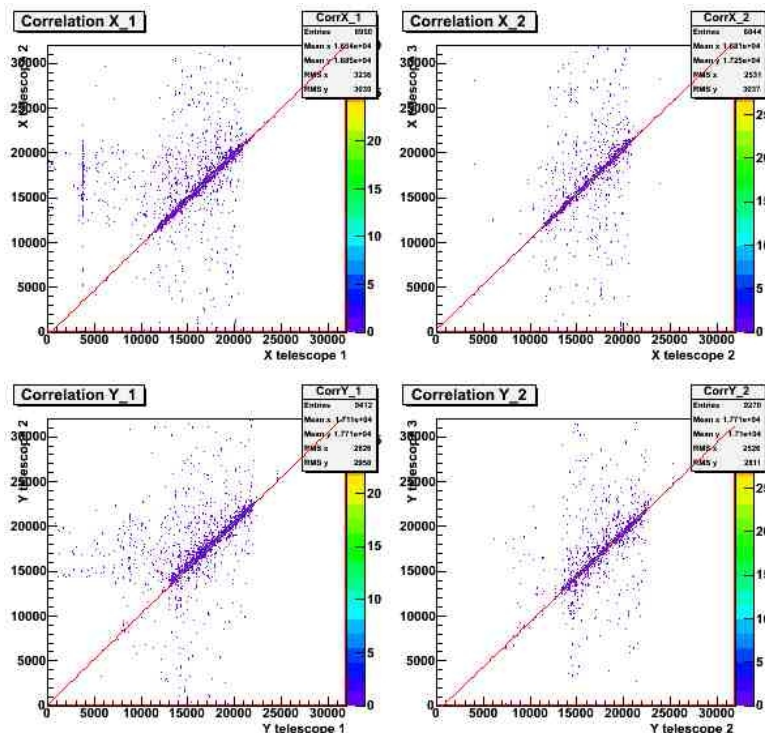

Results

- analysis of binaries with ROOT-based analysis program
- multiple options:
hit reconstruction

Results

- analysis of binaries with ROOT-based analysis program
- multiple options:
X-Y correlation plots

Results

- analysis of binaries with ROOT-based analysis program
- multiple options:
 - determine pedestals and noise

=> histograms of latest data run do not look right!
=> binary file somehow corrupted!

Outlook

1. Introduction
2. The testbeam
3. The ZEUS MVD telescope
4. Data Acquisition (DAQ)
5. Results
- 6. Outlook**

Outlook

- binary file of used DAQ somehow corrupted
=> find and fix bug

Outlook

- binary file of used DAQ somehow corrupted
 - => find and fix bug
- find and fix error in network-based DAQ

Outlook

- binary file of used DAQ somehow corrupted
 - => find and fix bug
- find and fix error in network-based DAQ
- enhance network capabilities of DAQ
 - => make DAQ software server-based
 - => clients (users) can remotely operate DAQ
