

Issues from Tier I/II session

CLOSE WAIT

Tigran comments

Files are removed when flushed if PNFS is down

Understood , needs to be fixed FAST .

xRootd queue

Small change , will be a patch in 1.7.0

Truncate with FTP

Who needs this (tigran comments)

Pool content not consistent with information in pnfs

We need a synchronization tool (don't know when)

Partial dCache software upgrade

Can be done in functional groups (pools, doors , central services, or may be more fine grained)

Mainly for minor upgrades

Log

Which log classes ?

Will be done very soon because we understand how important that is.

Current log is only for developers.

File hopping

Book (patrick explains)

Copy Manager (Maintenance module)

Is in place, needs better documentation

Services don't reconnect after restart of central services

We need log files to investigate (two reasons)

Under some conditions, files are worldreadable

Mark will provide more input on that

Database automatically cleaner ?

Timur

gridKa : backup of pnfs/chimera database

Tigran

SRM restart on changes of parameter (or Certificates)

Timur

Blacklisting of sites and users

Timur and Tigran

Kill particular ongoing transfers

can be done but is inconvenient

Internal cell communication

ports can be specified with 1.7 but needs to be configured in Im.conf

VACUUM ANALYZE not possible

VACUUM ANALYZE not possible
