

Worldsheet string theory in AdS/CFT and lattice

Thursday 25 February 2016 11:30 (30 minutes)

It is discussed how the integrable structure underlying the AdS/CFT system and the cross-fertilization of established field-theoretical tools to strings can be used to enhance our knowledge on the relevant string sigma model, and thus the predictivity of the duality.

Presenter: Dr FORINI, Valentina (Max Planck Institute for Gravitational Physics, Albert Einstein Institute)
