

# From Type II string theory towards BSM/dark sector physics

*Tuesday 23 February 2016 12:00 (30 minutes)*

Contrary to early “anything goes” statements, consistency of string theory compactifications severely constrains new physics scenarios, including the way the recently much-advocated axions can occur. These constraints will be discussed in the context of D-brane models in Type II string theory.

**Presenter:** Prof. HONECKER, Gabriele (Johannes-Gutenberg-Universität Mainz)
