

Search for Dark Particles at Belle

Eunil Won
on behalf of the Belle Collaboration
Korea Univ.

Patras workshop, June 24, 2016
Jeju Islands, Korea

Motivation

- Dark particles: originally considered as a new spin-1 boson for new physics beyond SM.
 - P. Fayet, Phys. Lett. B 95, 285 (1980)
- This proposed “dark (hidden) sector” can be a part of dark matter.
- It would mix kinetically with the photon.

$$\mathcal{L} = -\frac{1}{2}\epsilon F^{\mu\nu} F'_{\mu\nu}$$

ϵ : kinetic mixing parameter

PRD 79 115008 (2008)

- A' is created on-shell in radiative e^+e^- collisions.

A' can be short or long lived.

Motivation

The 11th Patras Workshop on Axions, WIMPs and WISPs: Gan Liping, JLab proposal:
<https://indico.desy.de/conferenceTimeTable.py?confId=11832#all> (last talk)

Liping Gan

Jlab Eta Factory (JEF) experiment

GLUE X

Simultaneously measure η decays: $\eta \rightarrow \pi^0 \gamma \gamma$, $\eta \rightarrow 3\gamma$, and ...

- ◆ η produced on LH_2 target with **9-11.7 GeV tagged photon beam**:
 $\gamma + p \rightarrow \eta + p$
- ◆ Reduce non-coplanar backgrounds by **detecting recoil p's** with GlueX detector ($\epsilon \sim 75\%$)
- ◆ Upgraded Forward Calorimeter with **High resolution, high granularity PbWO_4 insertion (FCAL-II)** to detect multi-photons from rare η decays

Standard Model & Dark Sector

$$\begin{pmatrix} u \\ d \end{pmatrix}$$

$$\begin{pmatrix} c \\ s \end{pmatrix}$$

$$\begin{pmatrix} t \\ b \end{pmatrix}$$

g, W^\pm, Z^0, H^0

γ/Z^0 mixing

γ

γ/A' mixing?

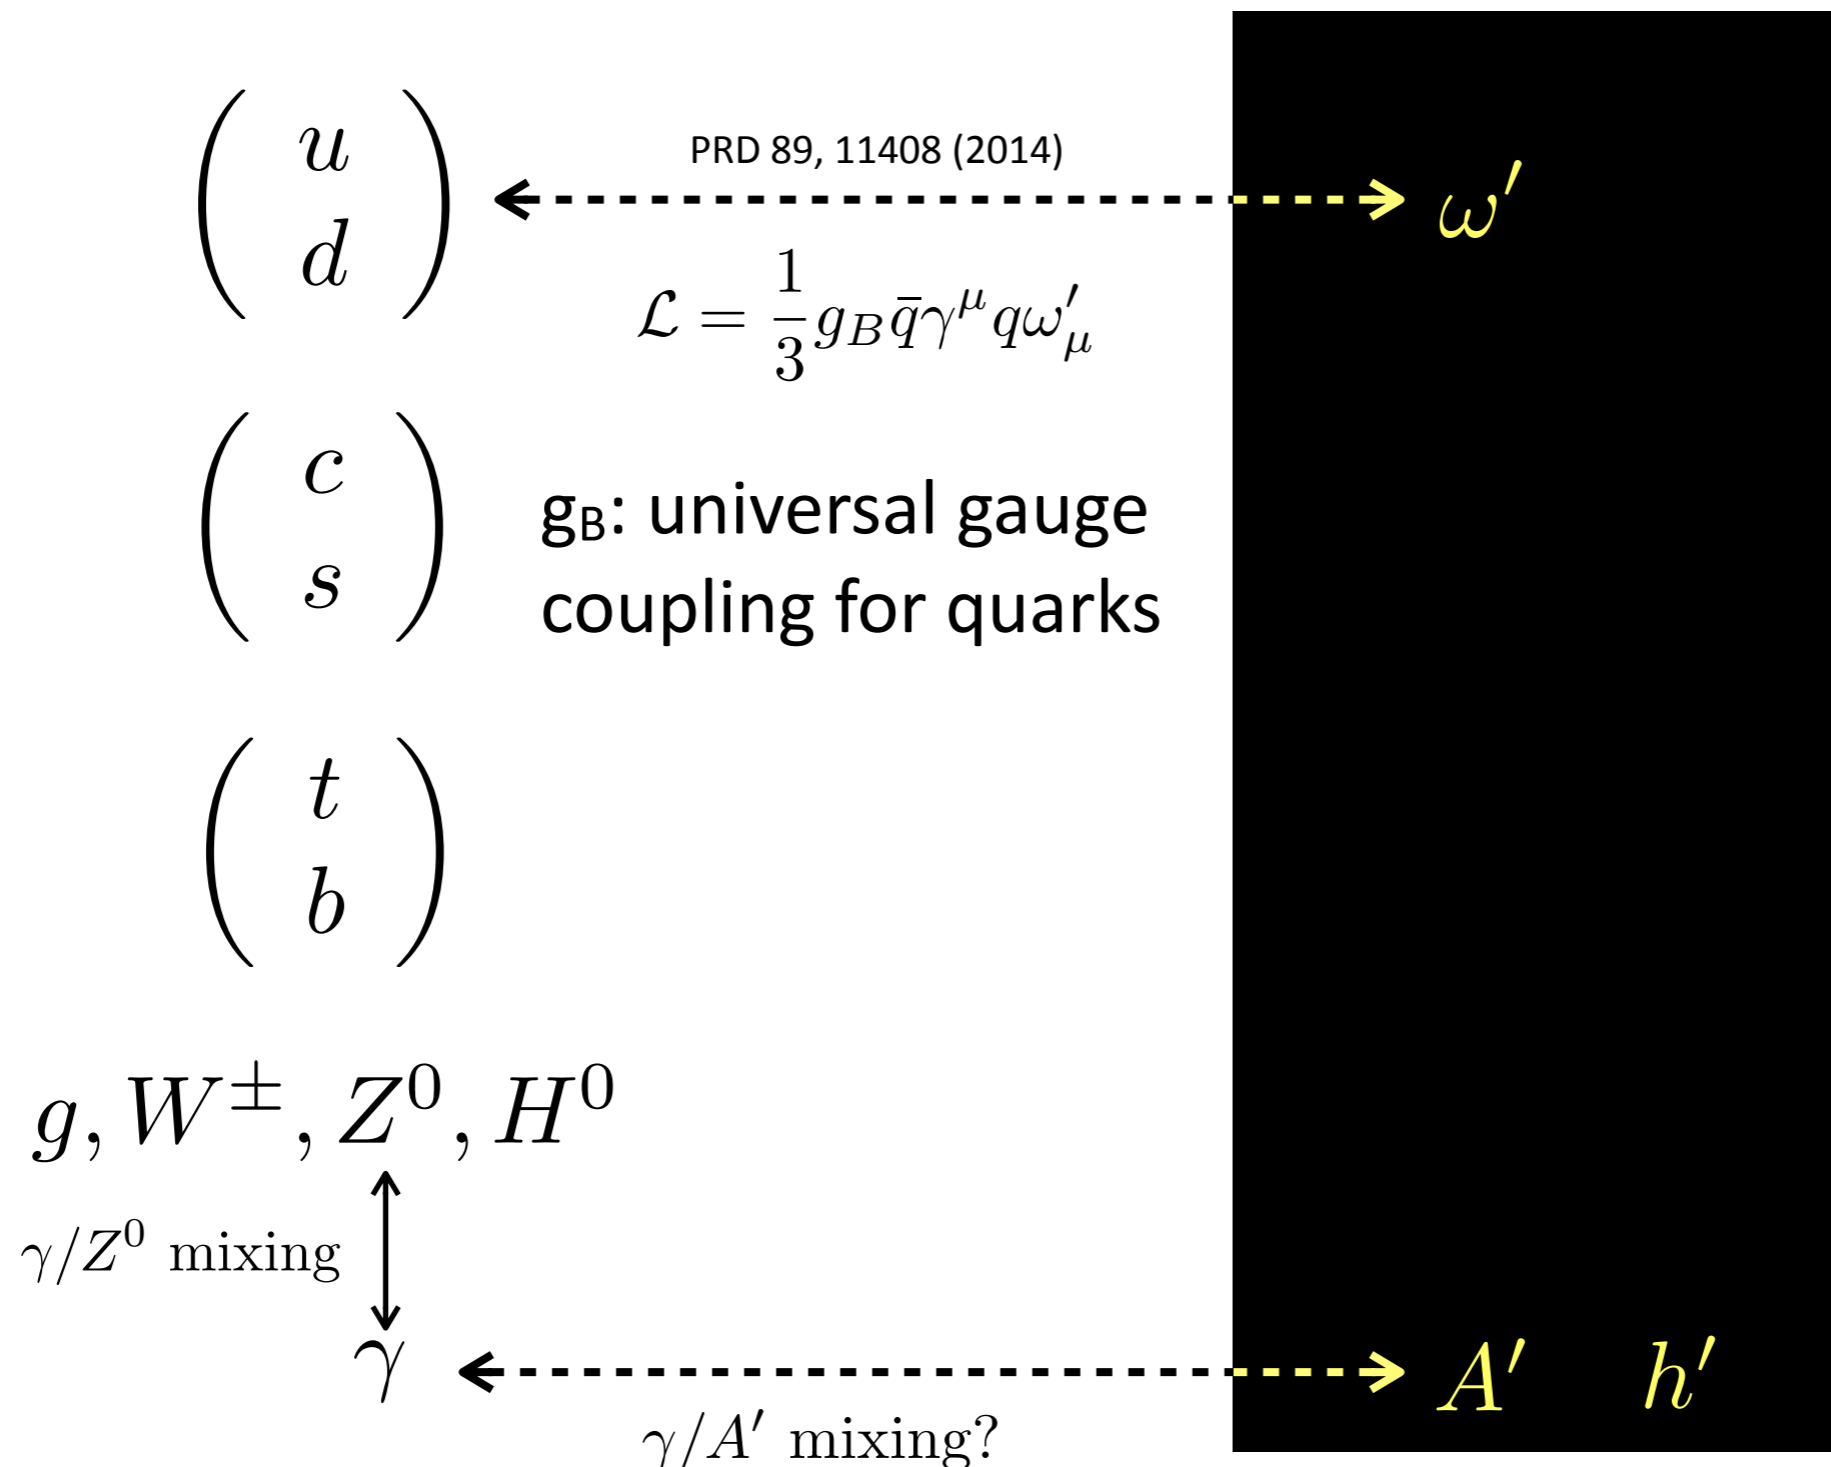

A'

h'

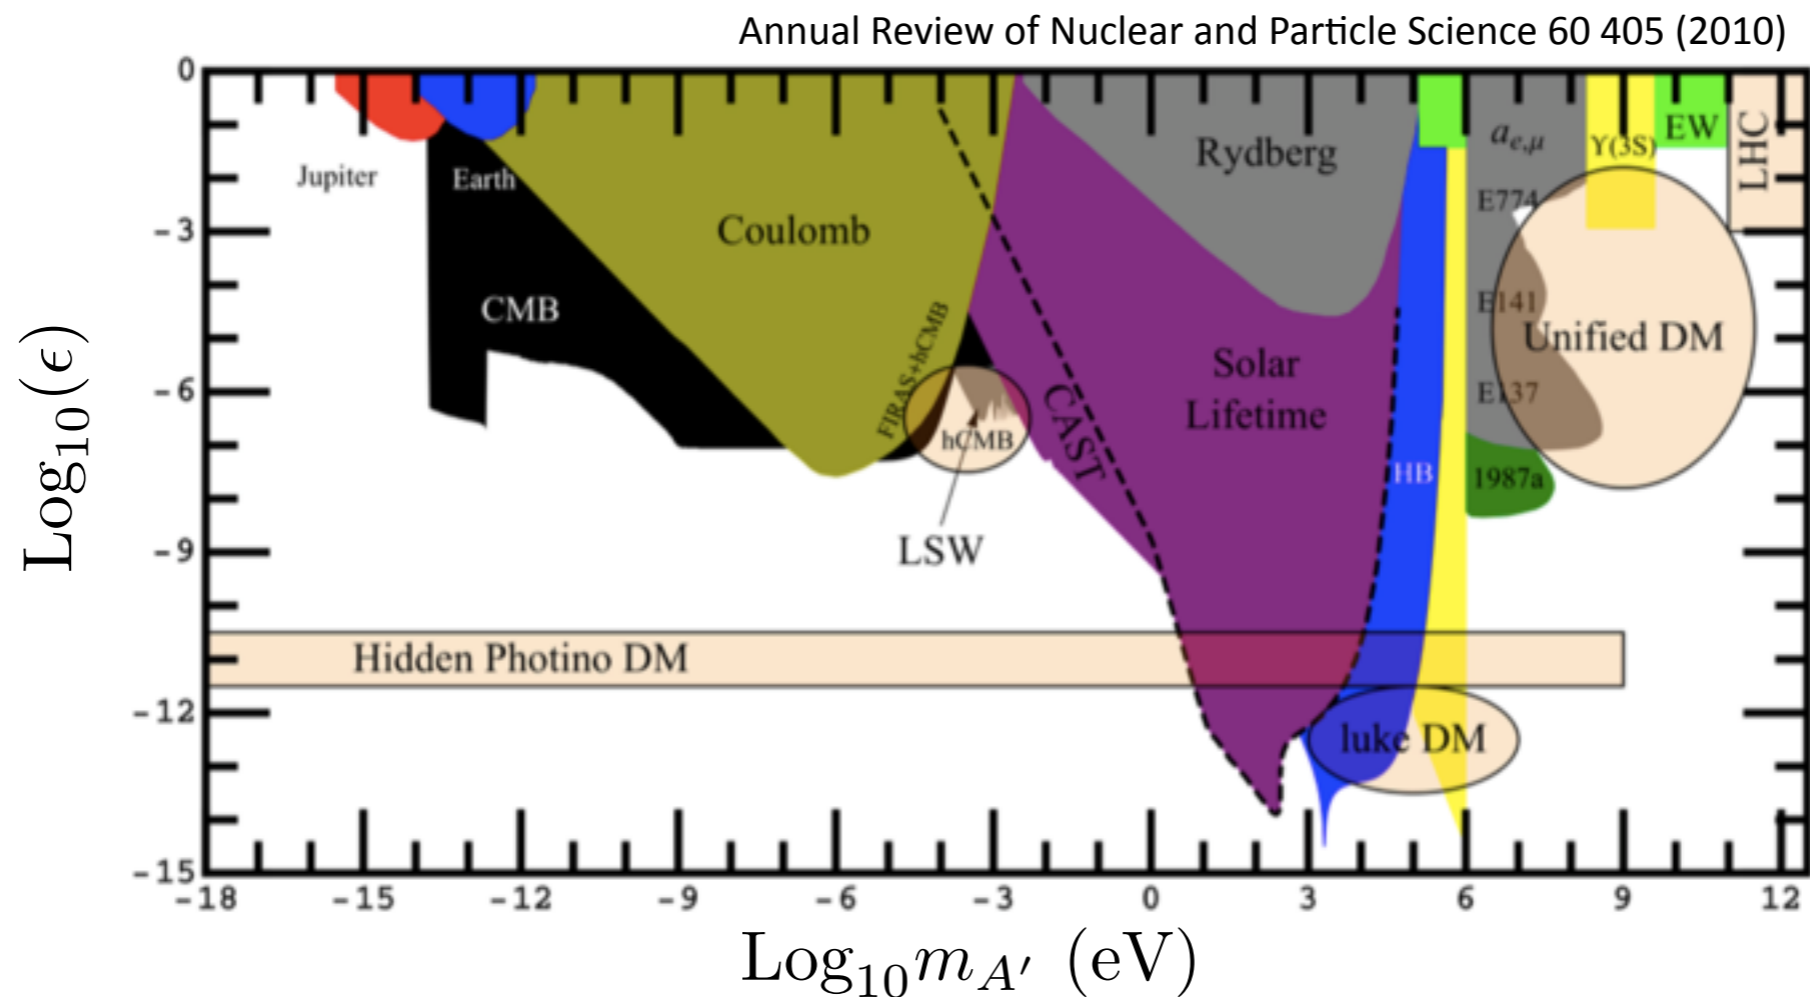

Standard Model & Dark Sector

- One can also think a new boson couples to light quarks

Present experimental sensitivity

- Dark gauge boson (dark photon): $A' = \gamma' = A = U$
- Expected to have small coupling to SM particles.
- Low mass of order MeV to GeV.

- An extended Higgs sector is required to break the new $U(1)'$ symmetry (dark Higgs: h').

KEKB e^+e^- Collider

3.5 GeV e^+ × 8.0 GeV e^-

$e^+e^- \rightarrow \Upsilon(4S)$

with $\beta\gamma = 0.425$

22 mrad crossing angle

Experiment: 1999 - 2010

$L_{\text{peak}} = 2.1 \times 10^{34} / \text{cm}^2 / \text{sec}$

$> 1 \text{ M BB pairs/day}$

Integrated $L = 1 \text{ ab}^{-1}$

Belle Detector

γ, π^0 reconstruction
 e^\pm, K_L identification

Electromagnetic Calorimeter
CsI(Tl) $16X_0$

TOF counter

K/\pi separation

K/\pi separation

Aerogel Cherenkov Counter
 $n = 1.015 \sim 1.030$

$3.5 \text{ GeV } e^+$

$8.0 \text{ GeV } e^-$

charged particle tracking

Central Drift Chamber
momentum, dE/dx
50-layers + He/C₂H₆

B vertex

Si Vertex Detector
4-layer DSSD

Muon / K_L identification

$K_L \mu$ detector
14/15 layer RPC+Fe

Search for A' and h' @ Belle

- Higgs-strahlung process (PRD 79 111508 (2008))
- $M_{h'} > 2M_{A'}$ and QED background is suppressed in this channel.

α_D : dark sector coupling constant

ϵ : kinetic mixing parameter

- 10 exclusive channels: $3(l^+ l^-)$, $2(l^+ l^-)(\pi^+ \pi^-)$, $(l^+ l^-)2(\pi^+ \pi^-)$, and $3(\pi^+ \pi^-)$
- 3 inclusive channels for $m_{A'} > 1.1 \text{ GeV}$: $2(l^+ l^-)X$

(X: missing mass from dark photon cand.)

Background Estimation

- Use same sign events: $e^+e^- \rightarrow (l^+l^+)(l^-l^-)(l^+l^-)$
- Order masses of lepton (hadron) pairs as $m_{\ell\ell}^1 > m_{\ell\ell}^2 > m_{\ell\ell}^3$
- Plot $m_{\ell\ell}^1 - m_{\ell\ell}^3$ vs. $m_{\ell\ell}^1$
- Select the region in invariant mass and predict the background using the same sign events

- Normalisation is from the side band same sign events
- Background estimated from counting same sign events

Belle results

(I. Jaegle et al., (PRL 114, 211801 (2015)))

Exclusive modes

Inclusive modes

- 19% of events due to $3(\pi^+\pi^-)$
- 74% of events due to $2(l^+l^-)X$

Belle results

(I. Jaegle et al., (PRL 114, 211801 (2015)))

Final-state	Events	Final-state	Events
$3(e^-e^+)$	1	$2(\mu^+\mu^-)(e^+e^-)$	1
$3(\mu^+\mu^-)$	2	$2(\mu^+\mu^-)(\pi^+\pi^-)$	1
$3(\pi^+\pi^-)$	147	$2(\pi^+\pi^-)(e^+e^-)$	5
$2(e^+e^-)(\mu^+\mu^-)$	7	$2(\pi^+\pi^-)(\mu^+\mu^-)$	6
$2(e^+e^-)(\pi^+\pi^-)$	2	$(e^+e^-)(\mu^+\mu^-)(\pi^+\pi^-)$	7
$2(e^+e^-)X$	572	$(e^+e^-)(\mu^+\mu^-)X$	30
$2(\mu^+\mu^-)X$	20		

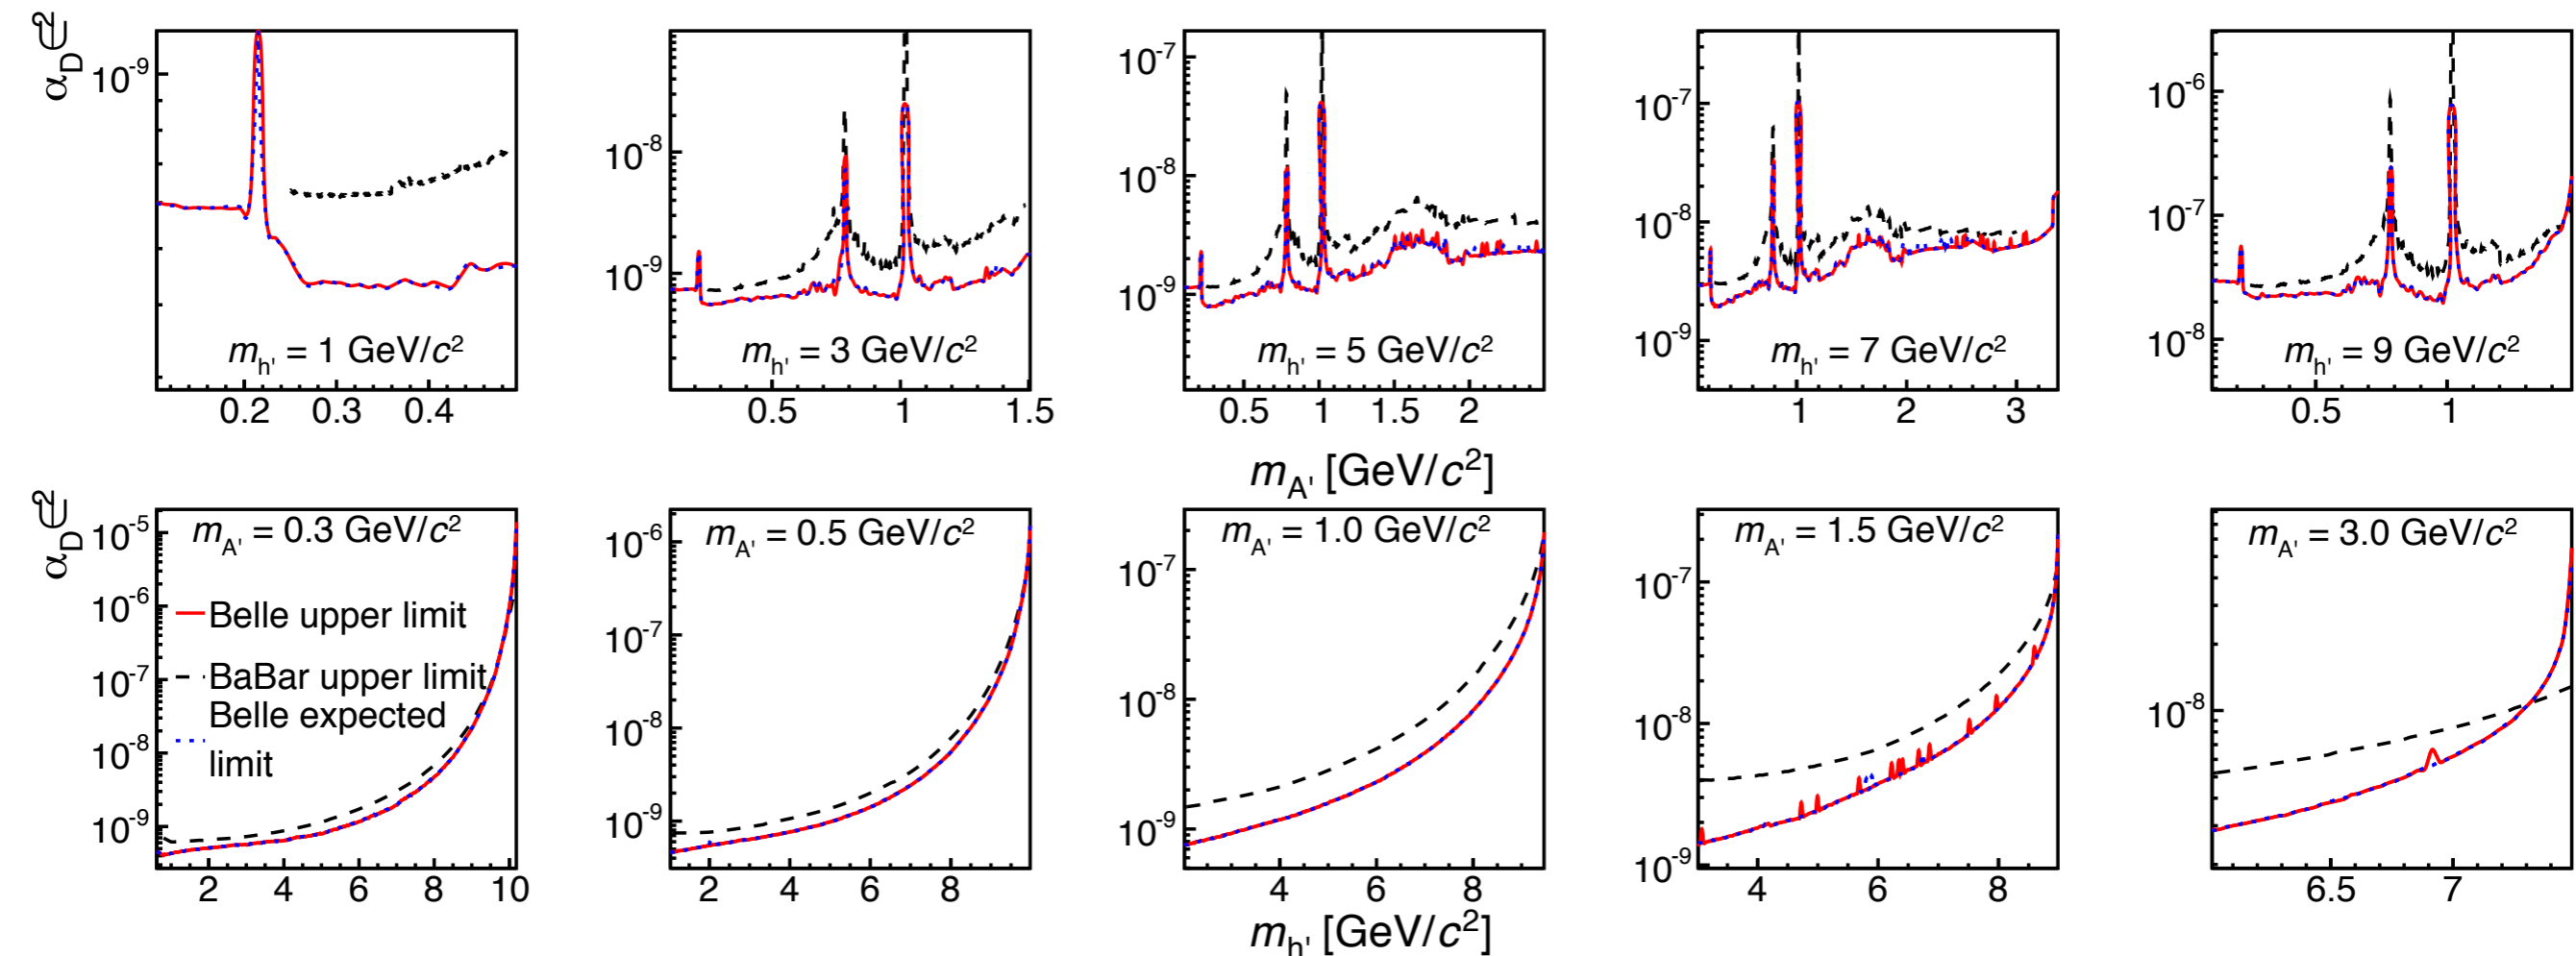

Number of events observed after all selection criteria are applied.

- Events consistent with background estimation.

Belle results - cont.

- Belle 977 fb^{-1} (PRL 114, 211801 (2015)) and BaBar 520 fb^{-1} (PRL 108 211801 (2012))

- 90% CL upper limit on the product of $\alpha_D \epsilon^2$ vs. dark photon mass (top) and dark Higgs boson mass (below)

Other ongoing analyses

- Long lived dark photon search.

- Invisible decays with photon conversion.

Single photon in the final state

- No such trigger in Belle.

- Photon conversion is under consideration.

Other ongoing analyses

- A new boson (ω') coupling to light quarks: S. Tulin, PRD 89, 11408 (2014)

The produced π^0, η, η' from e^+e^- collision can decay to a new boson and photon pair.

- Usually reconstructed light mesons suffer from combinatorial background.
- Suppress of such background is now under consideration.

Stay tune for next Patras workshop in 2017 !

SuperKEKB & Belle II

- 40 time higher luminosity with new damping ring, new lattice, crab cavities, and nano beam.

- New detectors: pixel sensor, silicon strip, PID with quartz bar, and upgraded readout for all.

Belle II Schedule

- Commissioning (phase 1) of the main ring (without final quads) started Feb. 1, 2016, with a commissioning detector (not the real Belle II detector).
- Add final quads in summer 2016.
- Belle II: installation of the outer detector: spring/early summer 2016.
- Belle II (w/o the vertex detector) roll in autumn 2016, cosmic rays.
- Phase 2 commissioning autumn 2017 - spring 2018
- Install vertex detector summer 2018
- **Full detector operation autumn 2018 (phase 3)**

Sensitivity @ Belle II

- $e^+e^- \rightarrow \gamma A', A' \rightarrow \ell^+\ell^- (\ell = e \text{ or } \mu)$
- Predicted Belle II limits extrapolated from BaBar
PRL 113, 201801 (2014) (C. Hearty B2TIP2014)
- Improved low multiplicity trigger and better dimuon invariant mass resolution.

Sensitivity @ Belle II

- $e^+e^- \rightarrow \gamma A', A' \rightarrow \chi\bar{\chi}$ (light dark matter R. Essig et al. arXiv:1309.5084)
- Predicted Belle II limits extrapolated from BaBar PRL 113, 201801 (2014) (C. Hearty B2TIP2014)
- Assuming a single photon trigger in Belle II.

Summary

- Studies on the dark sector represents an alternative to SM dark matter search.
- e^+e^- collider detector environment is sensitive to MeV - GeV ranges for proposed new dark particles: complementary to fixed-target experiment.
- We showed analyses at Belle for dark photon with decay to leptons or pions.
- Prospects with Belle II data are shown and we expect Belle II data taking in 2018.
