

# Dark matter research cluster based on computational science

*Friday 24 June 2016 10:20 (20 minutes)*

Let me introduce the convergence research cluster for dark matter which is supported by National Research Council of Science and Technology. The goal is to build research cluster of nationwide institutes from accelerator-based physics to astrophysics. The methodology is to do computational science using infrastructures at KISTI (Korea Institute of Science Technology Information) and KASI (Korea Astronomy and Space Science Institute). What we need for dark matter will be discussed.
