

Neutrinoless double beta decay searches with ^{76}Ge .

Bernhard Schwingenheuer (MPI Heidelberg)

Tuesday, 07 June 2016, 16:45 h, DESY Auditorium

The search for neutrinoless double beta decay might be the only window to observe lepton number violation and is therefore considered to be of highest relevance. The isotope ^{76}Ge has historically been most important for this search and the ongoing experiment GERDA has the lowest background of all experiments in the field. The talk reviews the motivation, the current status of experiments and future programs.

- **Coffee, tea and cookies will be served at 16:30h**
- **After the seminar there is a chance for private discussions with the speaker over wine and pretzels**
