

ATLAS NAF Status

- > Six NAF wgs, usually always busy, steady inflow of new accounts
- > Sonas partition is almost full, only about 30 TB free
 - We will get more when CMS moves to gpfs, but is getting critical
- > LOCALGROUPDISK: Clean up underway of DESY-HH/ZN space tokens
 - Situation most critical is DESY-ZN (600 TB), where many users have left without clean up of 100s TB
 - Should be able to free up about 109 TB in ZN in next 24h (47TB done yesterday)
 - Some clean up on DESY-HH, but this now has large amount of free space
 - New *rucio* quota system implemented at DESY-HH, default 10TB per user but more can be added, highest is currently 210 TB. Also to be done for DESY-ZN
- > Usual issues / complaints are almost 90% to do with the batch system
 - Jobs not starting, queries about number of slots available, no reliable monitoring...
 - Look forward to when batch systems are all under one HT-Condor roof, with new monitoring
