

BigStorage

Thursday 6 October 2016 11:20 (20 minutes)

BigStorage is a European Training Network (ETN) whose main goal is to train future data scientists in order to enable them to apply holistic and interdisciplinary approaches for taking advantage of a data-overwhelmed world. Such expertise is mandatory to enable researchers to propose appropriate answers to application requirements while leveraging advanced data storage solutions unifying cloud and HPC storage facilities. Four representative big data application use cases are studied to set up the foundation for the project: the Human Brain Project (HBP), the Square Kilometre Array (SKA), climate science and smart cities. More information is available at <http://bigstorage-project.eu/>.
