Neu: LHC Experimente machen Daten (und Simulationen) öffentlich

Level 1: Get Started

Physicists at the <u>ATLAS</u> Experiment visualise collision data with histograms. They are used in every publication, from simple analyses to headline-making discoveries. *In this section*, you will learn how the data is visualised.

Explore:

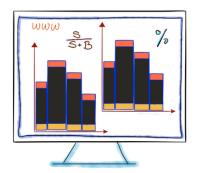

- Documentation: a step-by-step guide to using Histogram Analyser and ROOTbrowser
- Histogram Analyser: a web based tool for fast, cut-based analysis of data. Visualise data using online histograms
- ROOTbrowser: a web based tool for displaying histograms individually. More freedom to plot different variables
- Live events: see live events from the ATLAS experiment

Deutsche Beteiligung an Leitungspositionen (nur Level 1)

Top-Level Management

ATLAS Sprecher (ab 03/17): Karl Jakobs

ATLAS Stelly. Sprecherin: Beate Heinemann

Physikgruppen

ATLAS Standardmodell: Ulla Blumenschein

ATLAS Standardmodell: Matthias Schott

ATLAS Exotics: Klaus Mönig

Rekonstruktion/Computing

LHCb Flavour Tagging: J. Wishahi

LHCb Tracking: M. De Cian

CMS Statistics Comm. Chair: O. Behnke

CMS Computing RB Chair: M. Kasemann

Detektor/Upgrade

CMS Muon IB Chair: H. Reithel

CMS Tracker IB Chair: L. Feld

CMS BRIL IB Chair: W. Lohmann

LHCb Project Leader HLT: M. Vesterinen

LHCb Project Leader SciFi Tracker: U. Uwer

LHCb Upgrade Perf. Coordinator: J. Albrecht

Committees

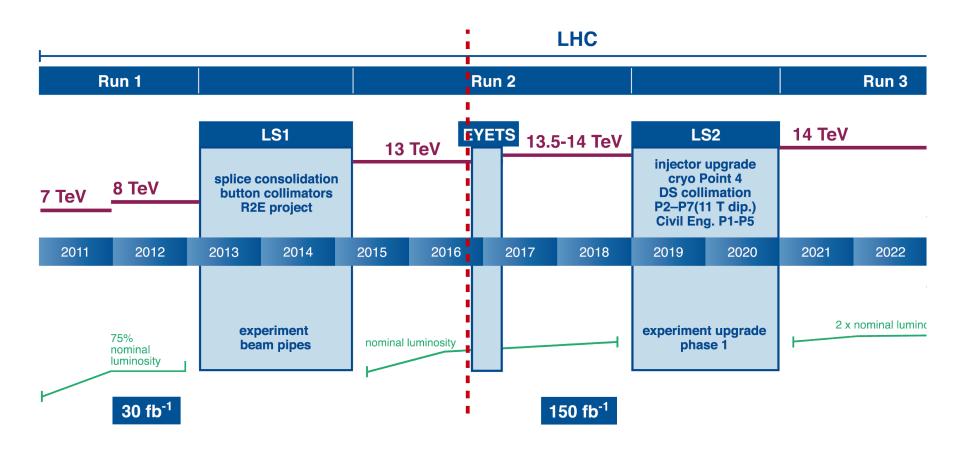

CMS Engagement Office: K. Borras

CMS Conference Committee Chair: A. Meyer

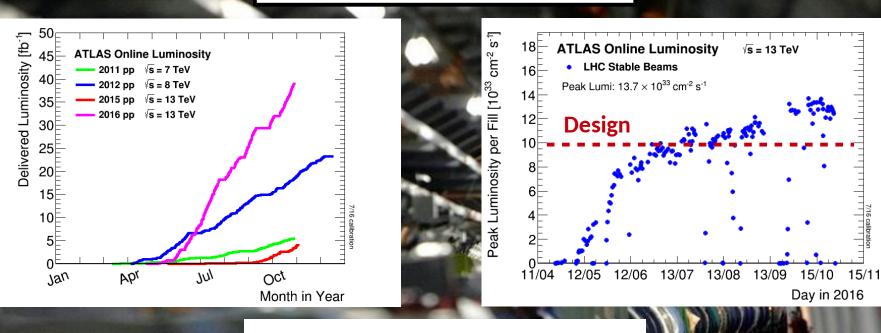

CMS Authorship Board Chair: M. Kasemann

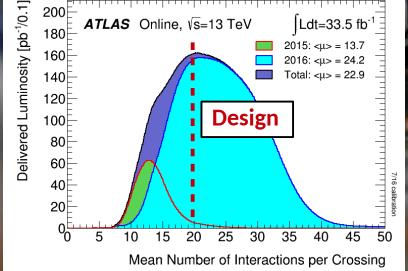

LHCb Editorial Board Chair: M. Schmelling

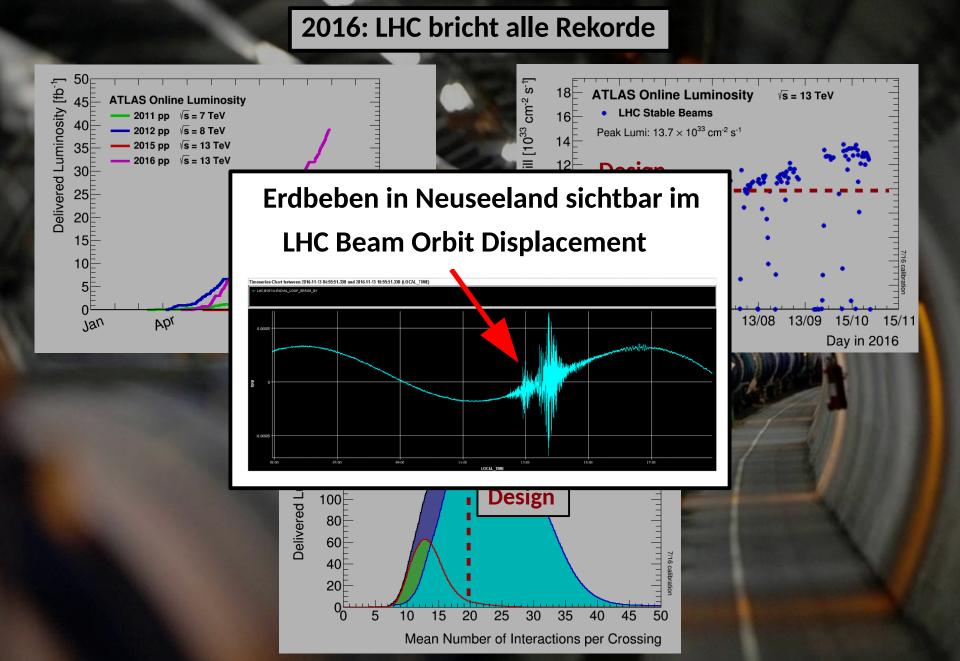

LHCb CB Chair: B. Spaan

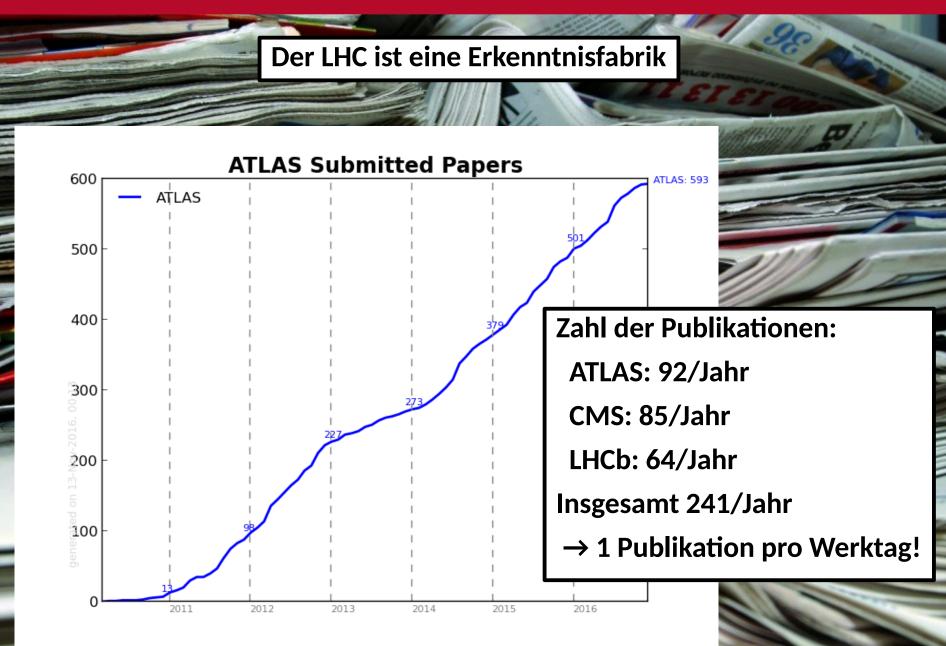

2016: LHC bricht alle Rekorde

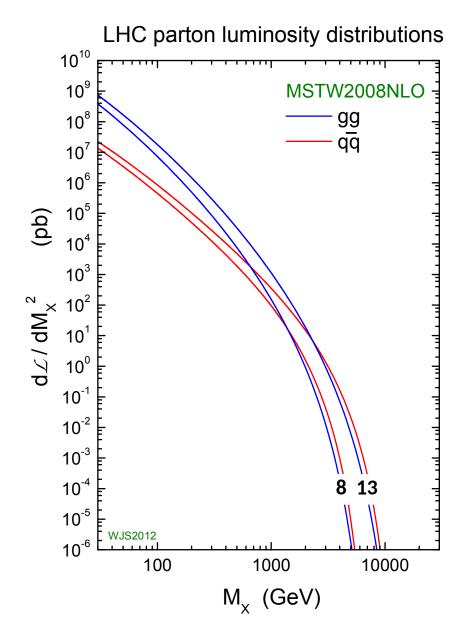

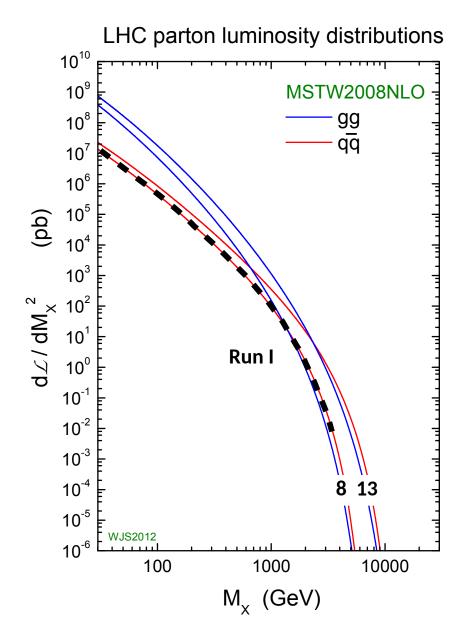

LHC Veröffentlichungen

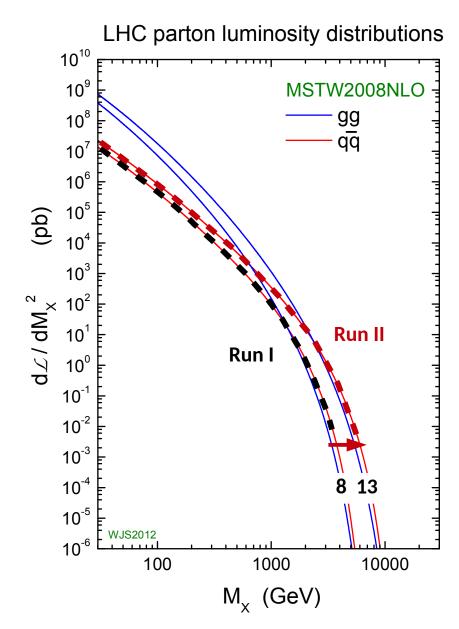

- Produktionsraten bestimmt durch
 Partonluminositäten
- dramatischer Einbruch bei hohen
 Massen

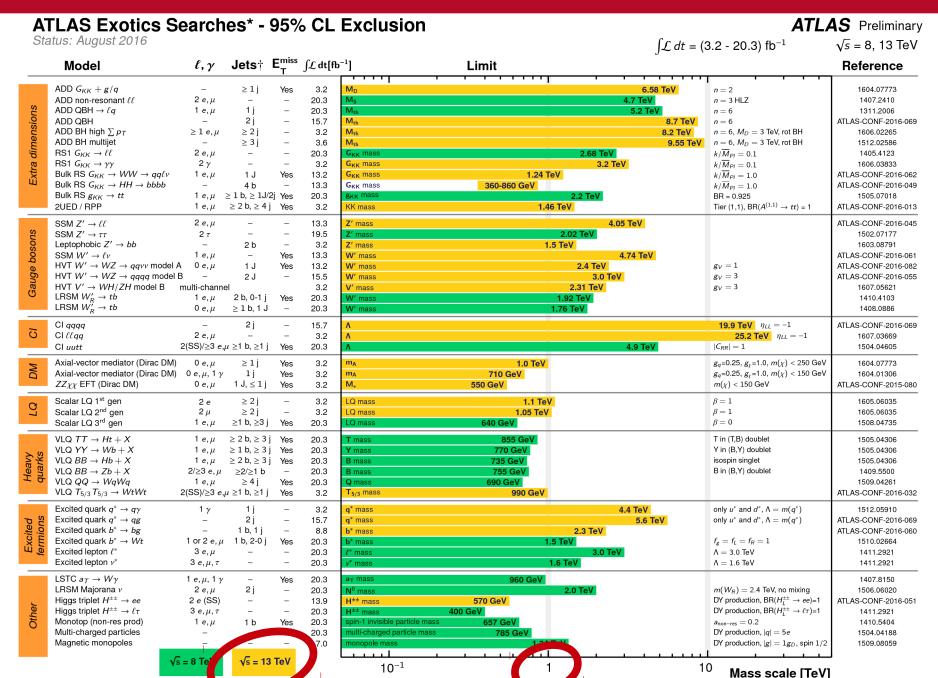

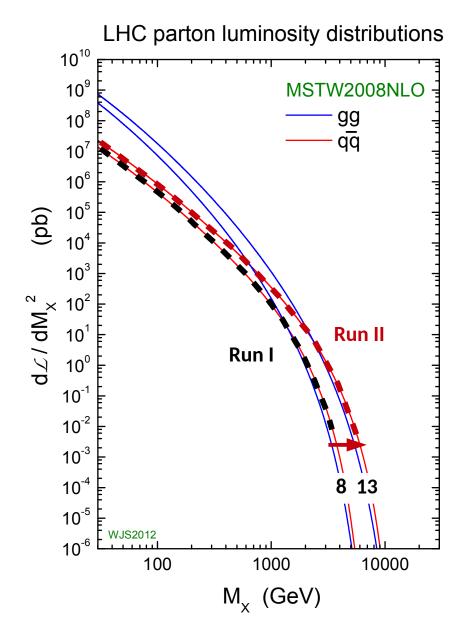

- Produktionsraten bestimmt durch
 Partonluminositäten
- dramatischer Einbruch bei hohen
 Massen

- Produktionsraten bestimmt durch **Partonluminositäten**
- dramatischer Einbruch bei hohen Massen
- **→** 2016: Sensitivitätsgewinn durch Energieerhöhung voll sichtbar

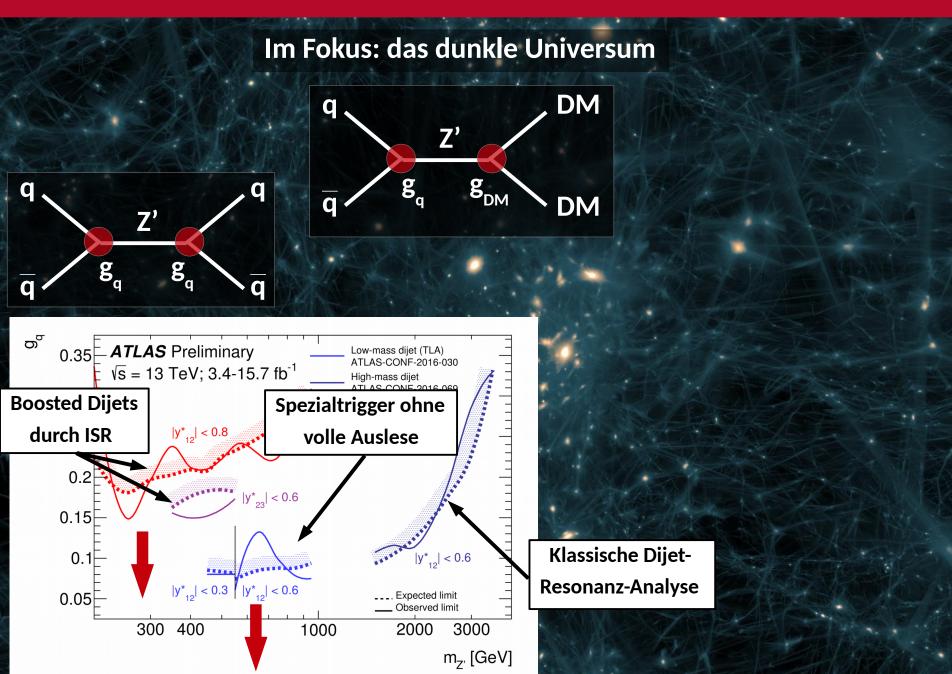

13 TeV: Zugang zu unerforschtem Terrain

- Produktionsraten bestimmt durch
 Partonluminositäten
- dramatischer Einbruch bei hohen
 Massen
- → 2016:
 Sensitivitätsgewinn durch Energieerhöhung voll sichtbar
- → ab 2017: viele Suchen am kinematischen Limit, neuer Fokus auf seltene Prozesse (im gesamten Massenbereich)

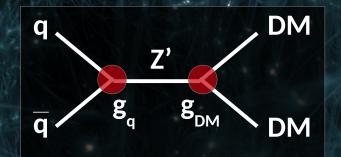

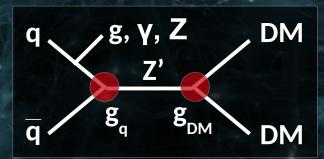

q

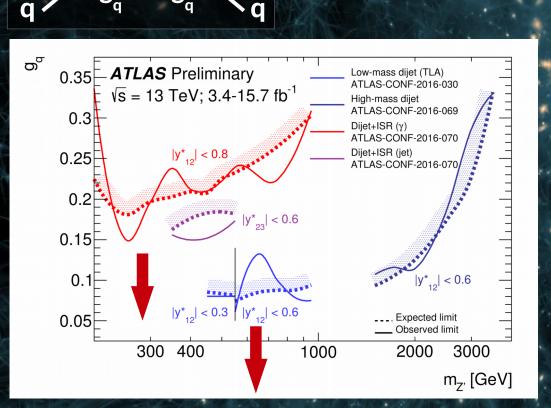

Z'

 g_q

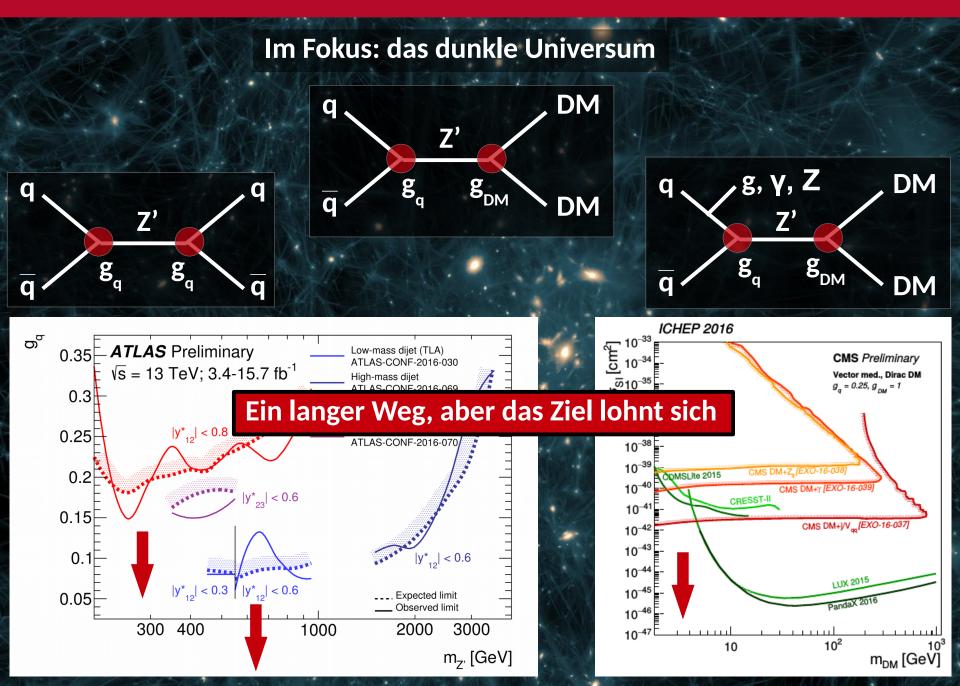

Im Fokus: das dunkle Universum

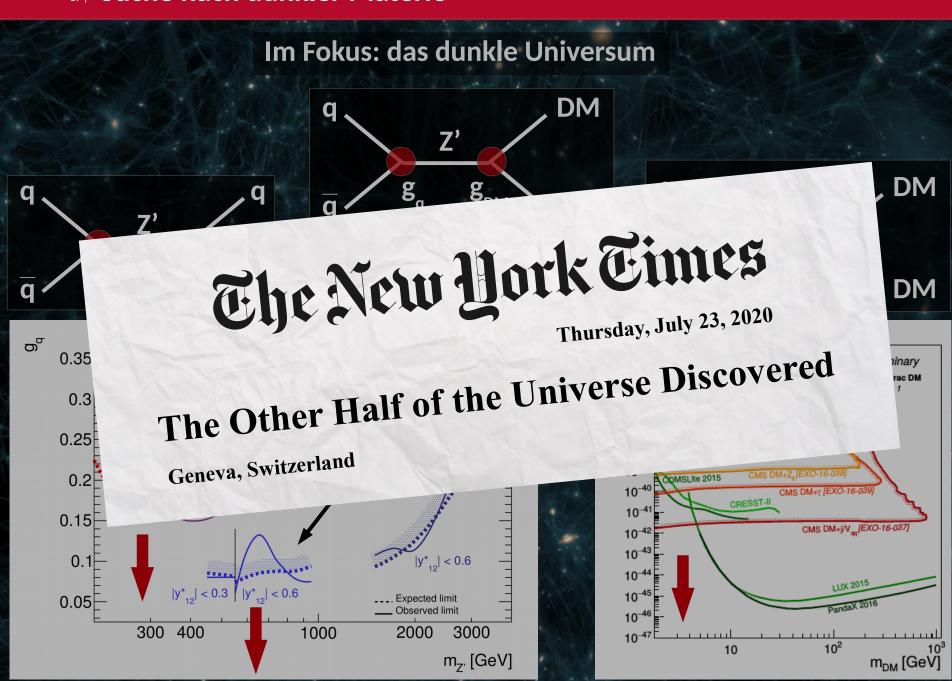

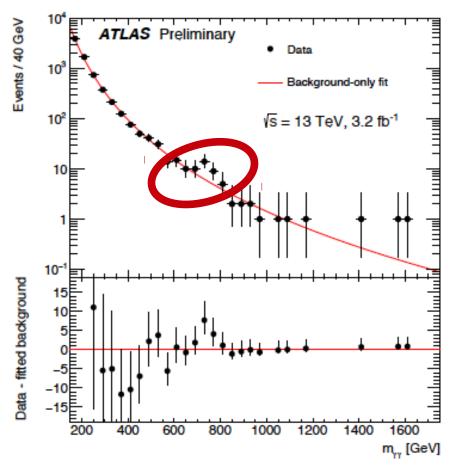

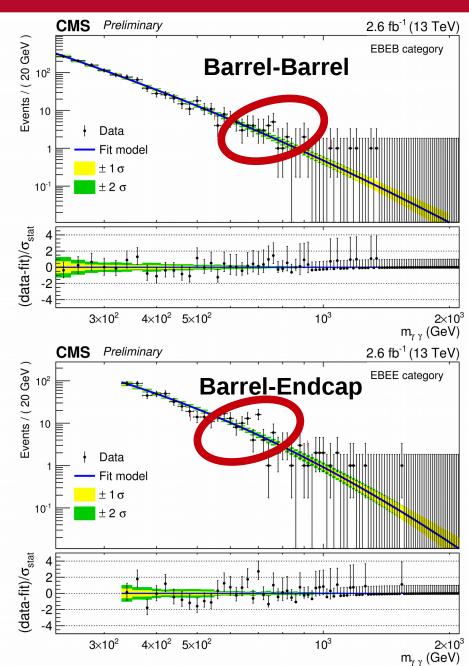

Dezember 2015:

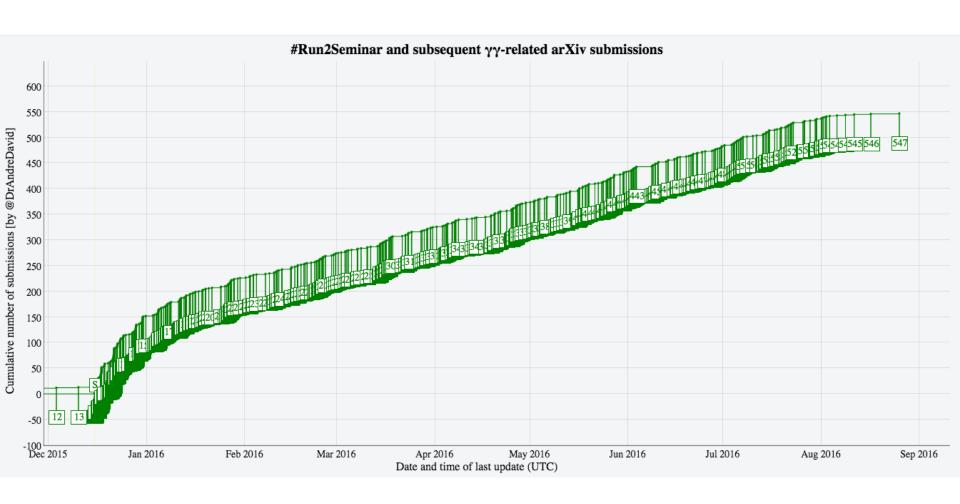

- Überschuss in γγ-Massenspektrum bei
 750 GeV in ATLAS+CMS
- kombinierte Signifikanz >3σ

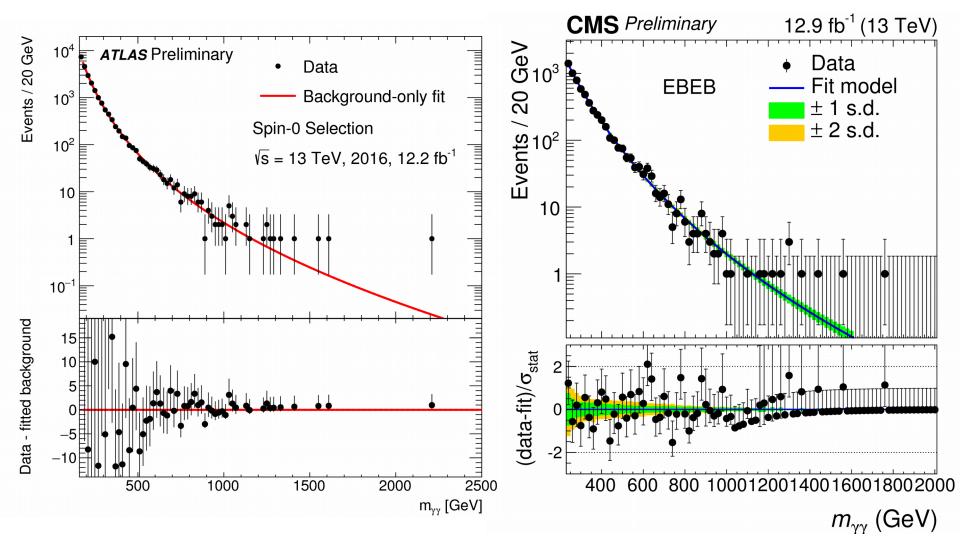

Ein Überschuss taucht auf, wird erklärt...

Deutlich über 500 Theorie-Publikationen in 8 Monaten!

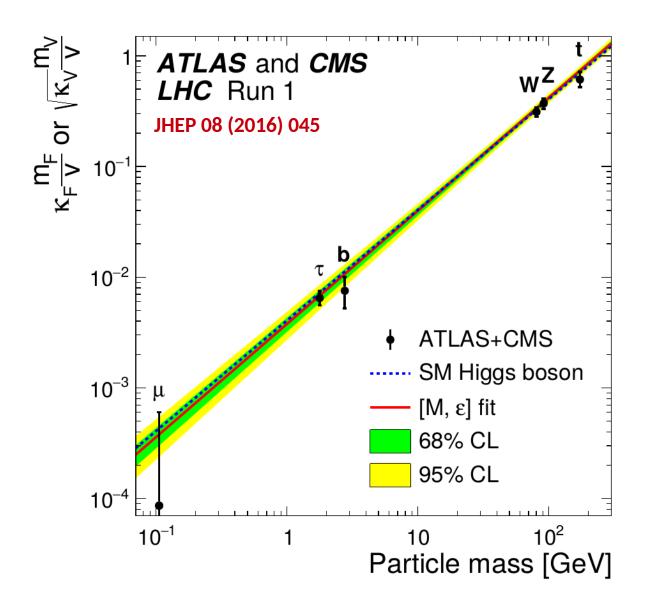

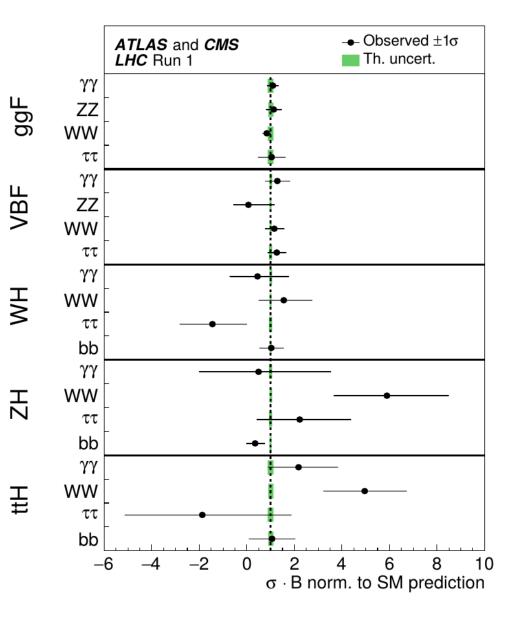

Sommer 2016: neue Daten zeigen keinen Überschuss → Fluktuation

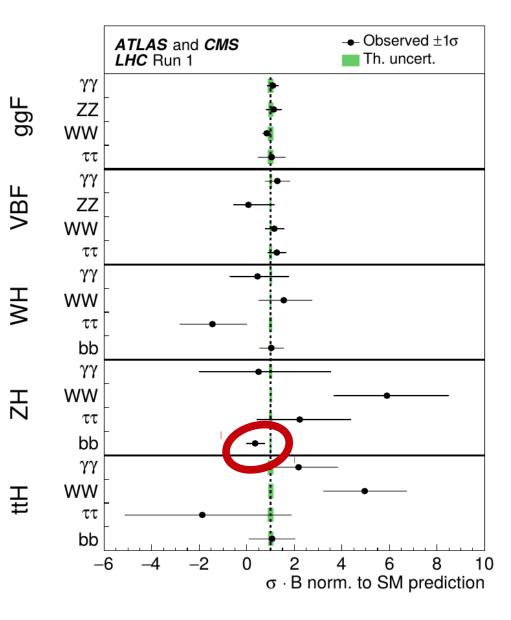

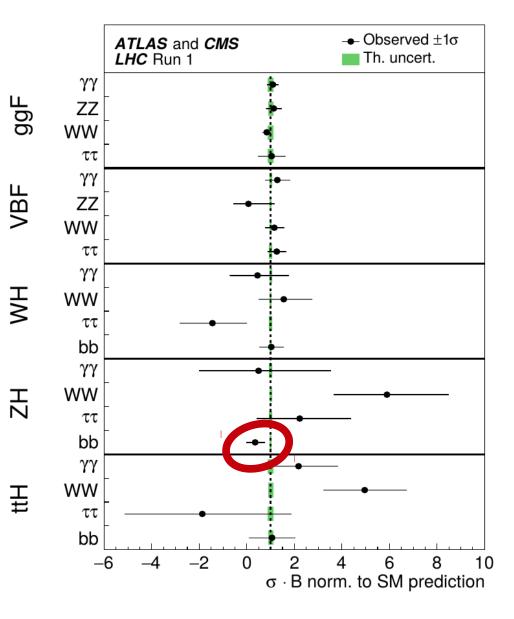

Ein Bild für die Lehrbücher: der Higgs-Mechanismus ist Realität!

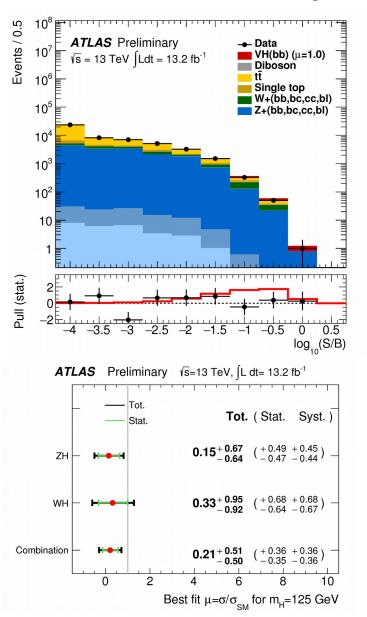

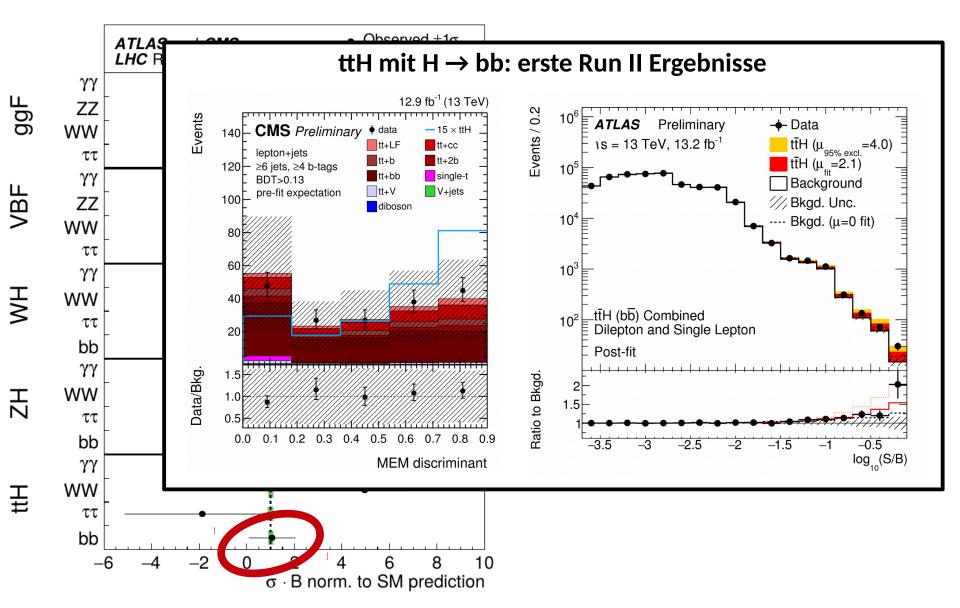

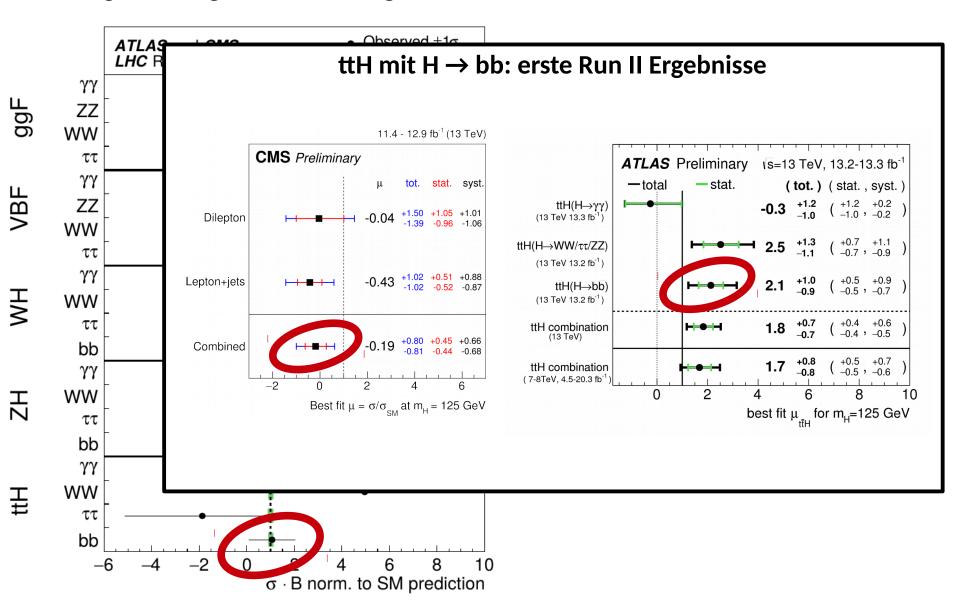

VH mit H → bb: erste Run II Ergebnisse

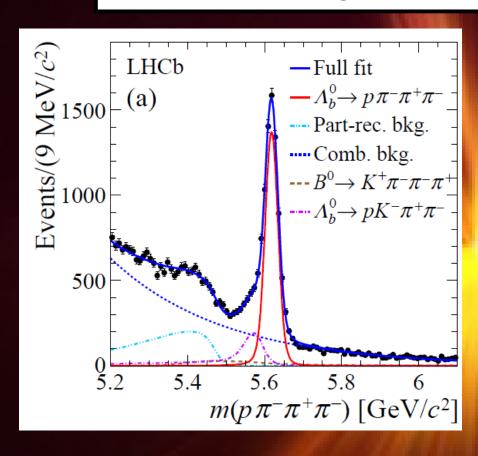

Im Fokus: Materie-Antimaterie Asymmetrie

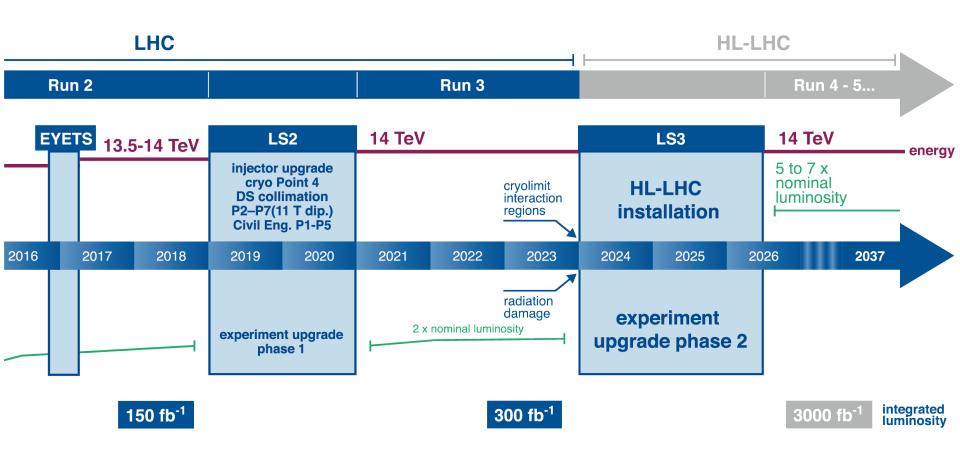

LHCb: CP-Verletzung erstmals in Baryonzerfällen beobachtet

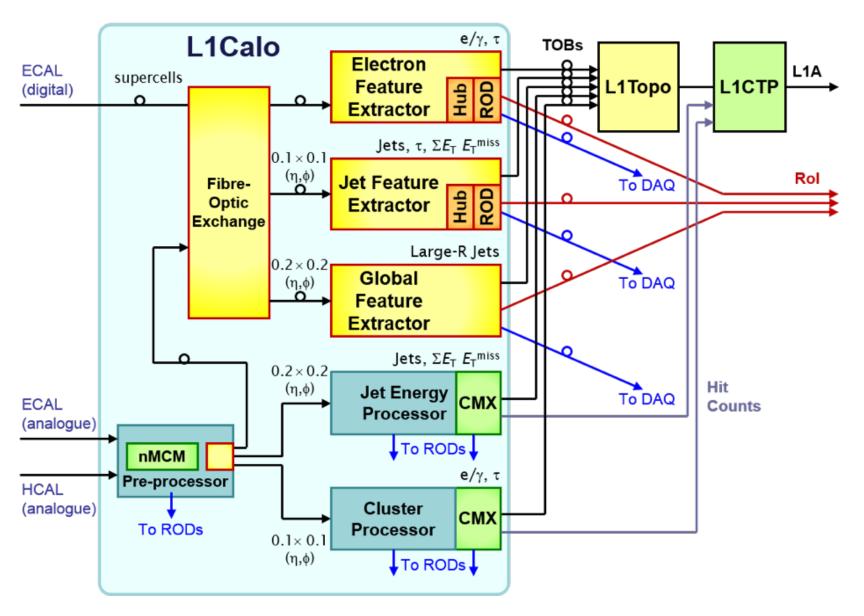

6700 Λ_b → pπππ Zerfälle
 Messung der CP-Asymmetrie in Phasenraum-Bins
 → CPV mit Signifikanz 3.3σ

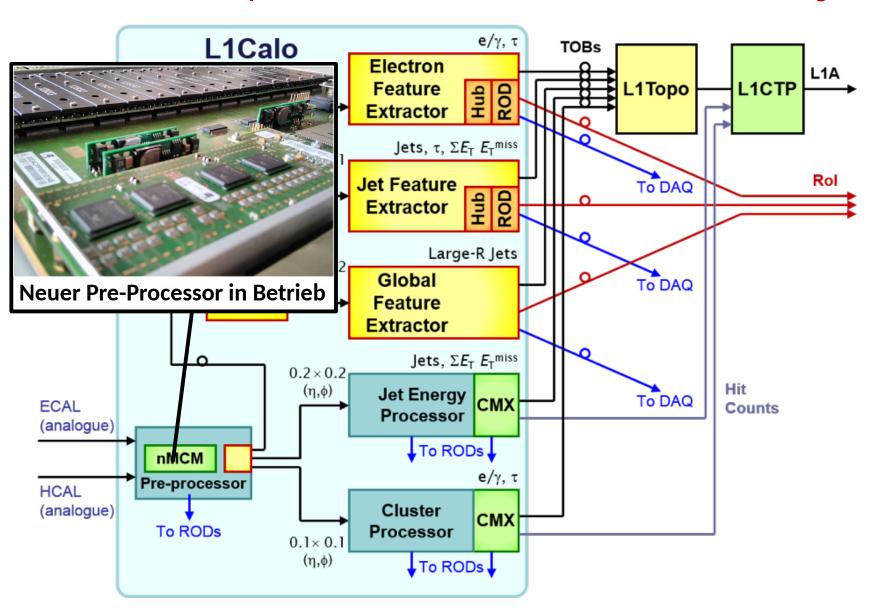

[eingereicht bei Nature Physics]

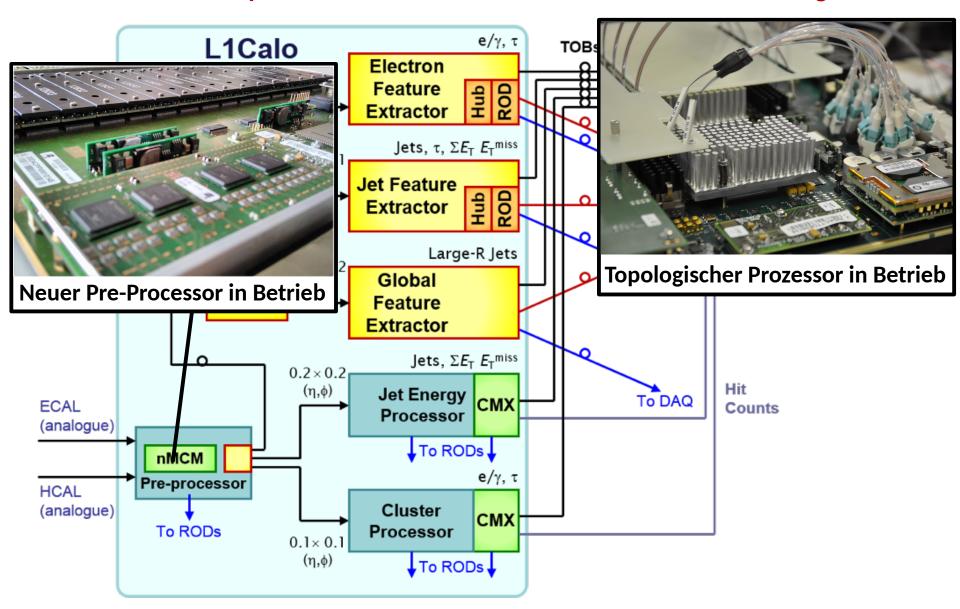

LHC Langfristige Planung

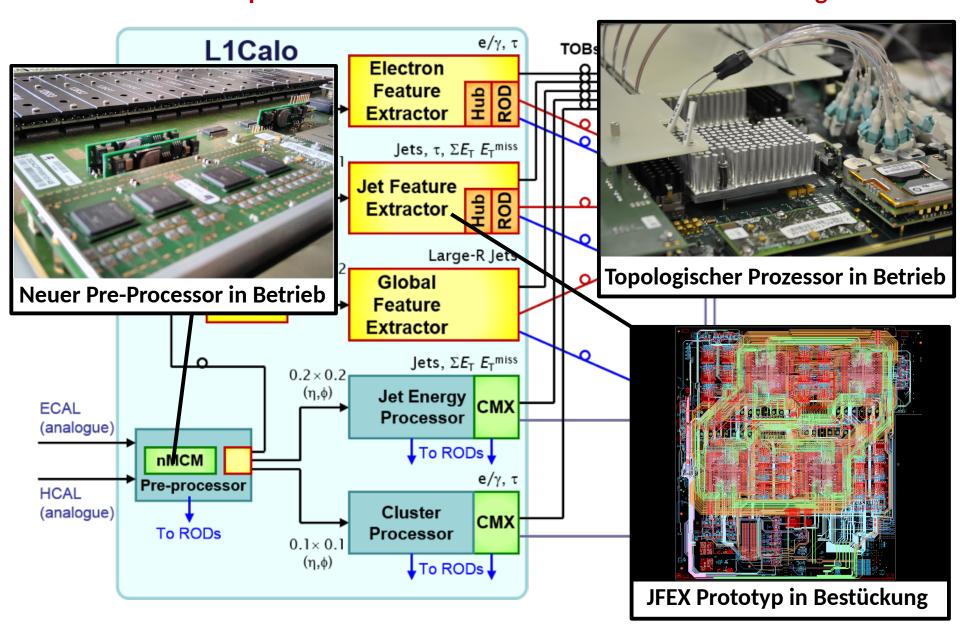

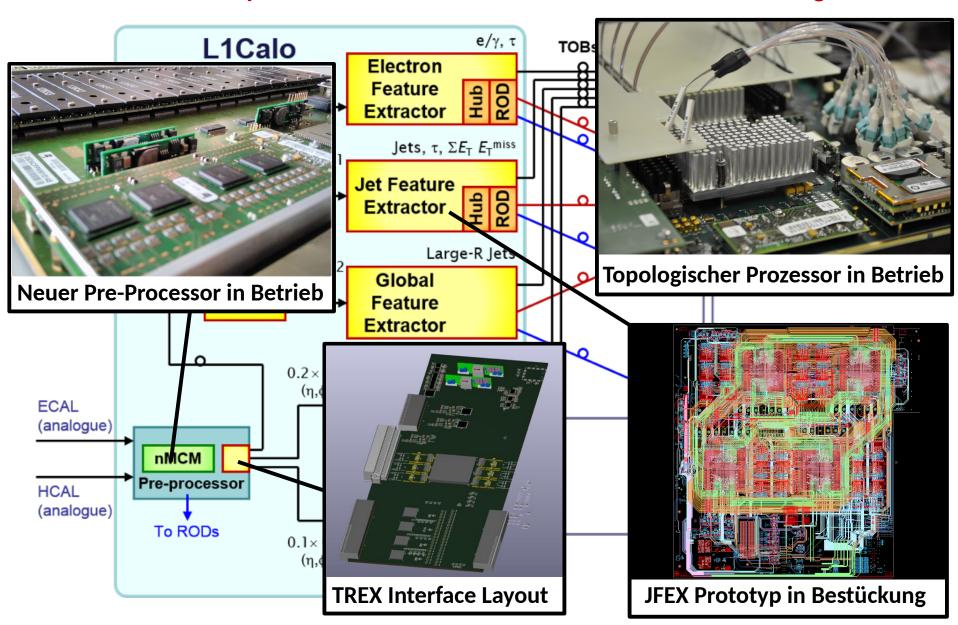

Starke deutsche Beteiligung an Phase 1 und Phase 2 Upgrades

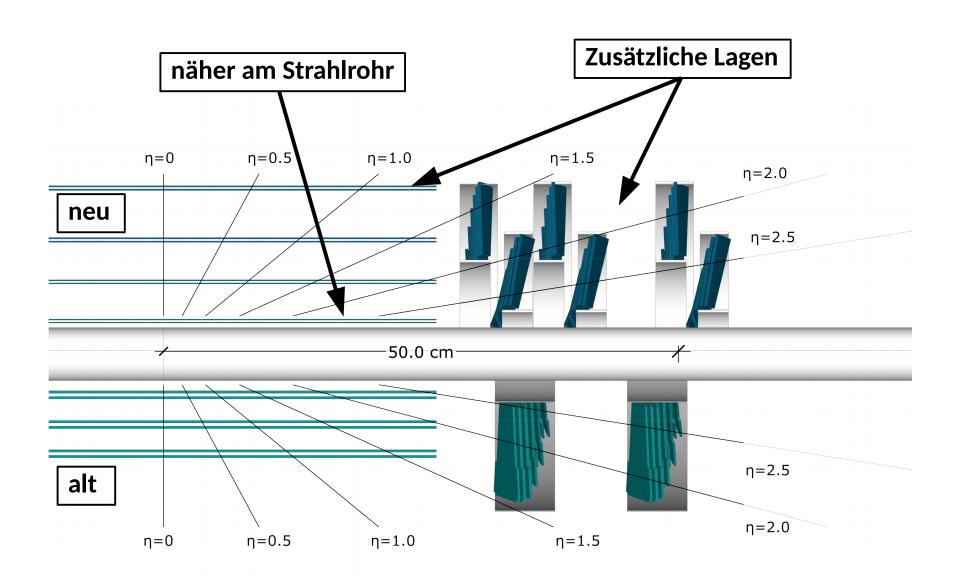

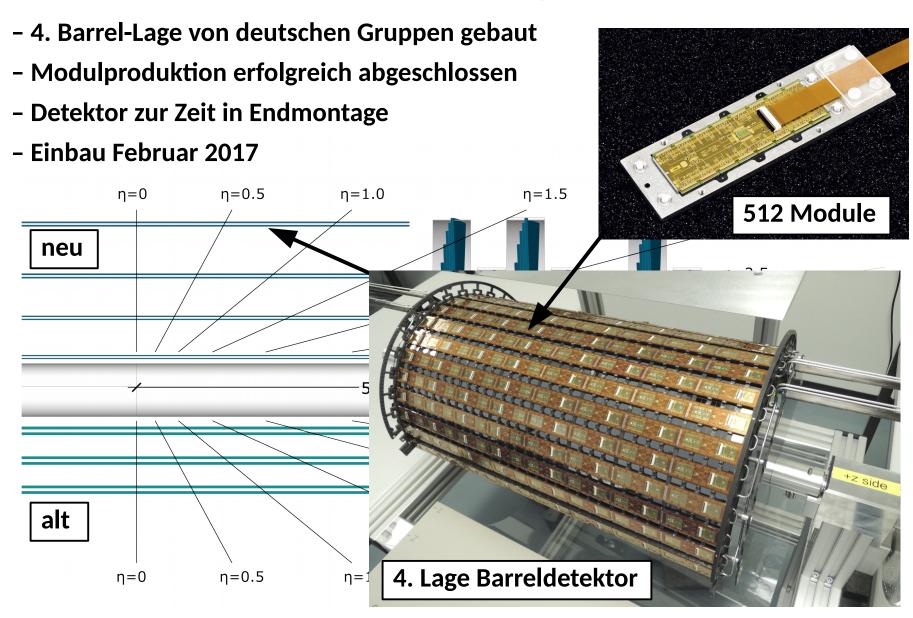

Beispiel Upgrade Phase 1: CMS Pixel Detektor

CMS Pixeldetektor wird komplett ersetzt

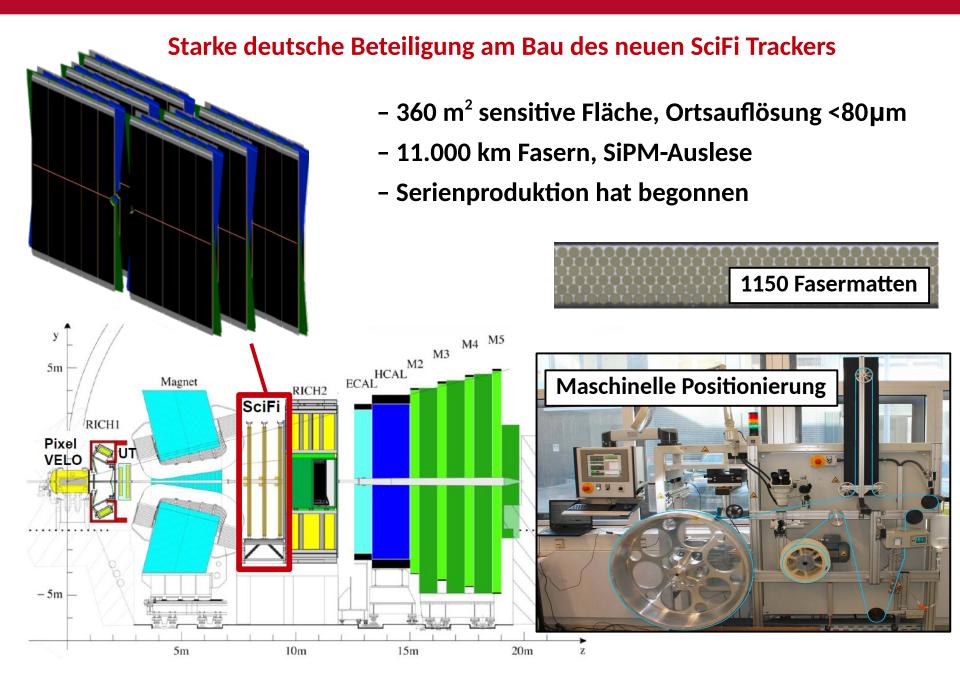

Beispiel Upgrade Phase 1: CMS Pixel Detektor

CMS Pixeldetektor wird komplett ersetzt

Beispiel Upgrade Phase 1: LHCb Scintillating Fibre Tracker

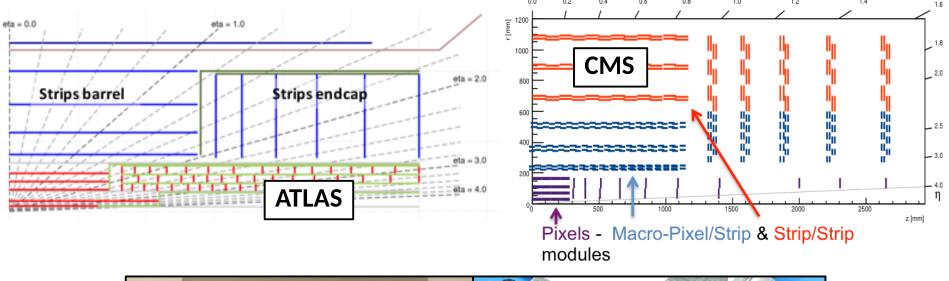

Upgrade Phase 2

Alle Projekte: TDRs in 2017, MoU gegen Ende 2017

BMBF-Funding aus FIS-Projekt: zur Zeit R&D, erste core-Mittel in nächster FP

Beispiel ATLAS und CMS Siliziumstreifendetektoren:

Bau jeweils einer Endkappe in Zusammenarbeit deutscher Universitäten und DESY

Zusammenfassung
