

The LISA space observatory: the science and the way forward.

Pierre Binetruy (Paris Univ.)

Tuesday, 18 October 2016, 16:45 h, DESY Auditorium

Please note:

This seminar is embedded in the Workshop “Gravitational waves and cosmology”

I will review the present status of the LISA mission, and the science that the mission will give access to, emphasizing what the recent discovery of gravitational waves, as well as the spectacular success of the LISAPathfinder technological mission, have taught us. I will discuss in particular what could be the impact of the mission for cosmology and high energy physics.

- Coffee, tea and cookies will be served at 16:25h
