

# WP3/WP7 discussion on Big Data

Eva Sicking (CERN)

Cremlin Workshop on Big data Management – Moscow  
February 16, 2017

## WP3/WP7 discussion on Big Data: Participants

- Session: “Big Data in particle physics and in research with ion sources”
- WP7 participants:
  - Massimo Lamanna (CERN)
  - Lucie Linssen (CERN)
  - Alexei Anisenkov (BINP)
  - Yuriy Tikhonov (BINP)
  - Eva Sicking (CERN)
- WP3 participants:
  - Jürgen Eschke (FAIR / GSI)
  - Thorsten Kollegger (FAIR / GSI)
  - Vladimir Korenkov (JINR Dubna)
- And many more...

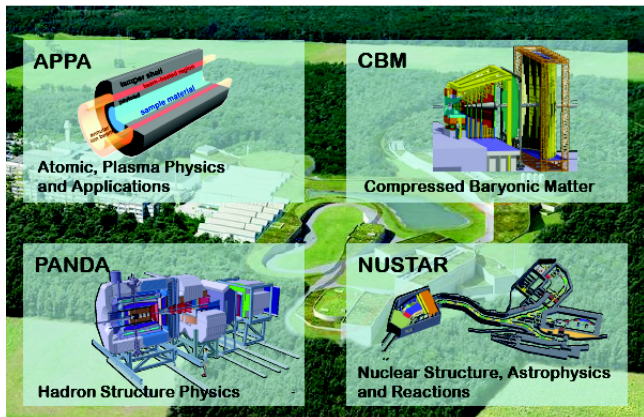

09:00	→ 09:10	<b>The requirements for computing for experiments at SCT</b> Speaker: Iouri Tikhonov (Budker Institute of Nuclear Physics (RU))	🕒 10m 
09:10	→ 09:20	<b>Software &amp; Computing for Linear Collider Experiments</b> Speaker: Eva Sicking (CERN) 	🕒 10m 
09:20	→ 09:30	<b>WLCG: Worldwide LHC Computing Grid</b> Speaker: Vladimir Korenkov (Joint Institute for Nuclear Research (RU))	🕒 10m 
09:30	→ 09:31	<b>FAIR computing (already presented in Session I)</b> Speakers: Jurgen Eschke (GSI - Helmholtzzentrum für Schwerionenforschung GmbH (DE)), Thorsten Kollegger (GSI - Helmholtzzentrum für Schwerionenforschung GmbH (DE)) 	🕒 1m 
09:31	→ 09:32	<b>Computing for experiments at the LHC (already presented in Session I)</b> Speaker: Massimo Lamanna (CERN)	🕒 1m 
09:32	→ 09:33	<b>CRIC: the evolution of the ATLAS Grid Information System for other collaborations (already presented in Session I)</b> Speaker: Alexey Anisenkov (Budker Institute of Nuclear Physics (RU)) 	🕒 1m 
09:33	→ 10:30	<b>Discussion</b>  Which big data challenges exist? How can we share existing information and solutions? How can this link to Kremlin deliverables? (e.g. task 7.3 "Cremelin data management platform for lepton colliders" <==> intended as a platform for sharing information, software applications, etc).	🕒 57m 

# Discussion topics

- What are our big data challenges?
- How can we share existing information and solutions?
- How can this link to Cremlin deliverables?
  - Example: Task 7.3 "Cremlin data management platform for lepton colliders"

# Big Data challenges at FAIR

- Facility for Antiproton and Ion Research: FAIR
- Currently under construction
- Start in 2025

- 1 TByte/s into online farms
- 35 PByte/year disk
- 30 PByte/year tape
- 300.000 cores (majority on-site in common compute center)
- Green Cube (data center for FAIR and GSI)
- Common software framework for all FAIR experiments and beyond

# Big Data challenges at JINR: WLCG & NICA

JINR grid sites of WLCG/EGI: Tier-1 for CMS  
Tier-2 for ALICE, ATLAS, CMS, STAR, LHCb,  
BES, biomed, fermilab

## Cloud infrastructure

**Heterogeneous(CPU + GPU)**  
**computing cluster HybriLIT**

Off-line cluster and storage system for BM@N, MPD,  
SPD Storage and computing facilities for local users

## Network infrastructure

## Engineering infrastructure

- Large existing infrastructure
- Already numerous existing collaboration with many experiments
- Tier 1 for CMS
- Tier 2 for all LHC experiments
- Strong cooperation between FAIR and NICA

# Big Data challenges at CLIC

- Current simulation studies:
  - Grid solution iLCDIrac, using WLCG, OSG
  - 5.5 PB files
  - 41 grid sites
- Data during CLIC operation:
  - Bunch trains, trigger-less readout
  - 10 GByte/s
- CDR in 2012, now prepare for next European Strategy meeting
- Possible start date: 2035
- Simulation studies to identify physics potential, detector R&D
- Example: Higgs physics paper in 2016
- Small linear collider community: Cooperation with other projects
- Common software solutions shared between CLIC, ILC, CALICE, FCC, neutrino experiments, LHC
- Use existing infrastructure: Grid, EOS

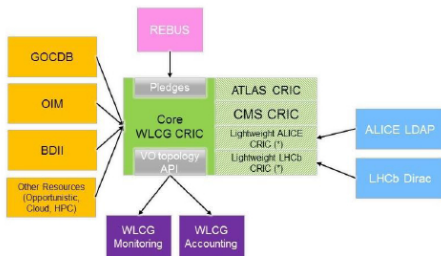

# Big Data challenges at SCT

- 8 GByte/s data rate
- $\sim 50$  PB/year

# CRIC: BINP& CERN collaboration

(\*) Maintained by WLCG to store very simple experiment topology information (i.e. experiment names)

- Computing Resource Information Catalogue (CRIC) → replaces AGIS
  - Single entry point for WLCG topology and service configuration
  - Currently used by ATLAS
  - Proposed to be used for other LHC experiments, too
  - Combine CRIC and Dirac (LHCb)
  - Option: Integrated CRIC into CLIC/ILC Grid submission system (iLCDirac)

# Challenges → Expand Cooperation

## BINP SCT:

- Increase data link to Novosibirsk  
0.5 GBit/s link currently → 10 GBit/s link currently
- Increase size of local data center by factor 100

## Link to WP7 Cremlin deliverables

- Ongoing WP7 actions:
  - Setup of web-based platform for sharing existing information and software tools between lepton collider projects
- Potential option for further collaboration:
  - Integrated CRIC system developed at BINP into CLIC grid submission system
