# Timing experiments at current BSRF and future HEPS

*Tuesday 28 March 2017 15:00 (20 minutes)*

High Energy Photon Source (HEPS), a near diffraction-limited light source, is planned to be constructed in Beijing in 2018. We will firstly introduce the timing experiment developments in current Beijing Synchrotron Radiation Facility (BSRF), then we will envision the timing experiments in the HEPS with a proposed time-resolved beamline.
