

Status of the Cosmic Axion Spin Precession Experiment (CASPER)

Monday 15 May 2017 18:15 (20 minutes)

The Cosmic Axion Spin Precession Experiment (CASPER) uses nuclear magnetic resonance (NMR) techniques to search for spin precession induced by ultralight axion dark matter. I will discuss recent experimental progress, including a new experimental mode based on zero- to ultralow-field (ZULF) NMR.
