upstream couplers

downstream coupler

Kick near to the axis

$$\mathbf{k}_\perp(x, y) = \begin{pmatrix} -0.0069 \\ -0.0094 \end{pmatrix} + \begin{pmatrix} 3.2 & -1.1 \\ -1.1 & -1.0 \end{pmatrix} \begin{pmatrix} x[\text{m}] \\ y[\text{m}] \end{pmatrix} \left[\frac{\text{kV}}{\text{nC}} \right]$$

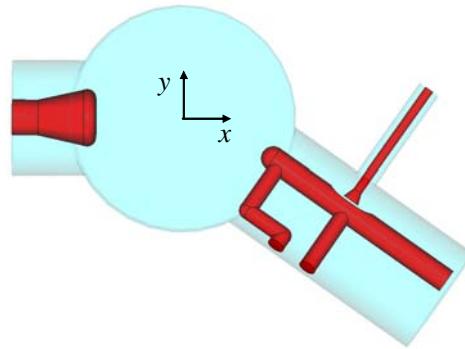

$$\mathbf{k}_\perp(x, y) = \begin{pmatrix} -0.0142 \\ -0.0095 \end{pmatrix} + \begin{pmatrix} 1.02 & 1.15 \\ 1.15 & 0.07 \end{pmatrix} \begin{pmatrix} x[\text{m}] \\ y[\text{m}] \end{pmatrix} \left[\frac{\text{kV}}{\text{nC}} \right]$$

upstream couplers

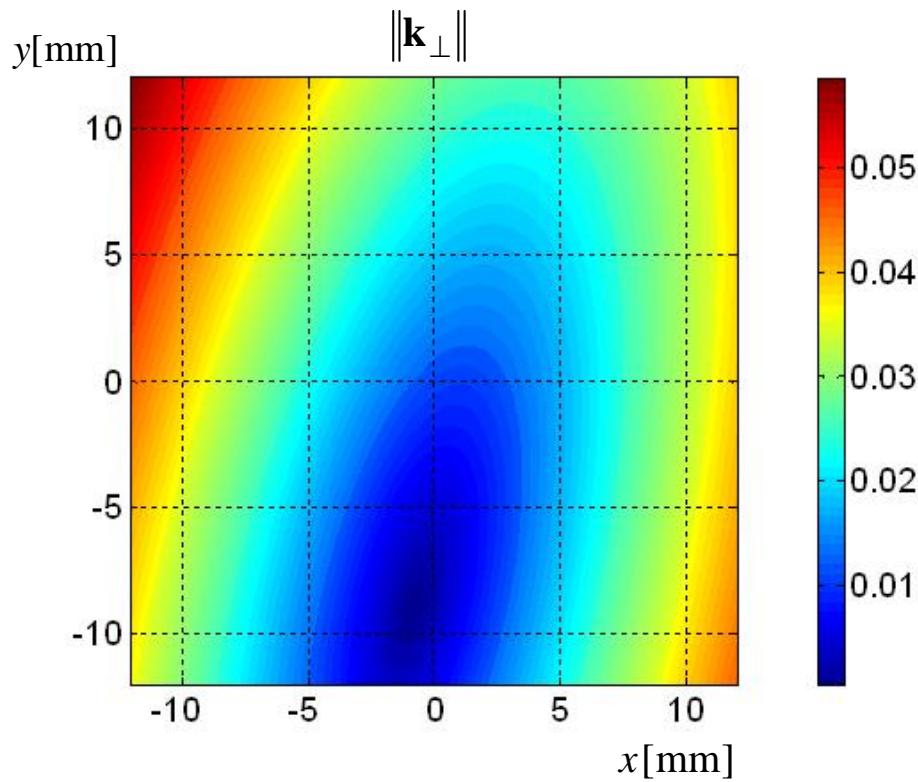

downstream coupler

Kick near to the axis

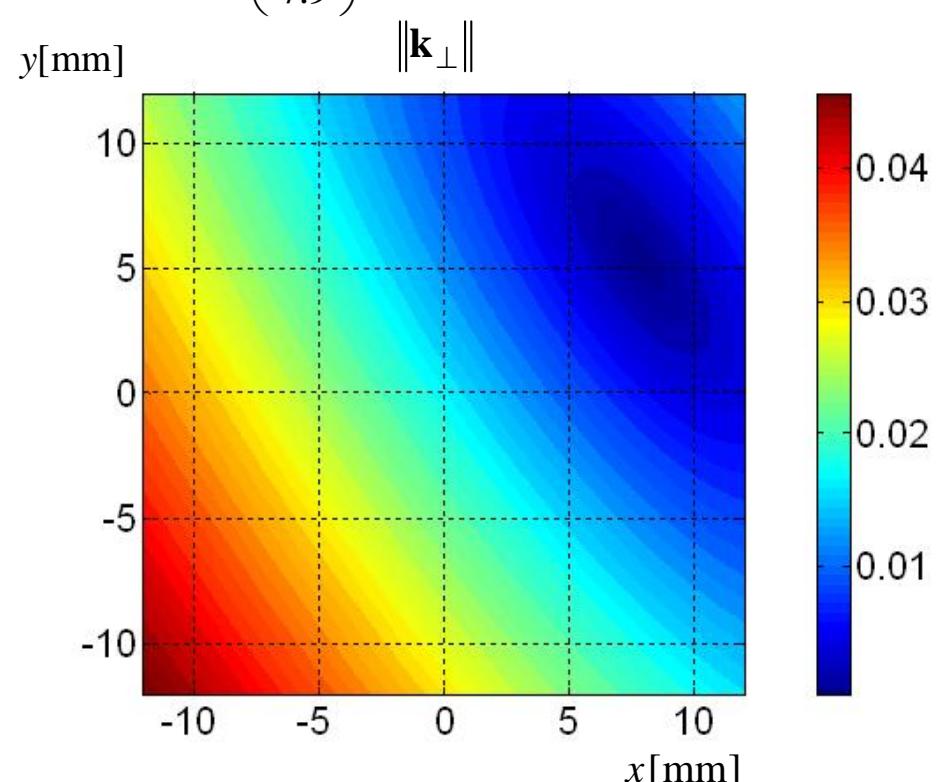

$$\mathbf{r}_c = \begin{pmatrix} -0.8 \\ -8.9 \end{pmatrix} \text{ mm}$$

$$\|\mathbf{k}_\perp\|_{\min} = 3e-5 \frac{\text{kV}}{\text{nC}}$$

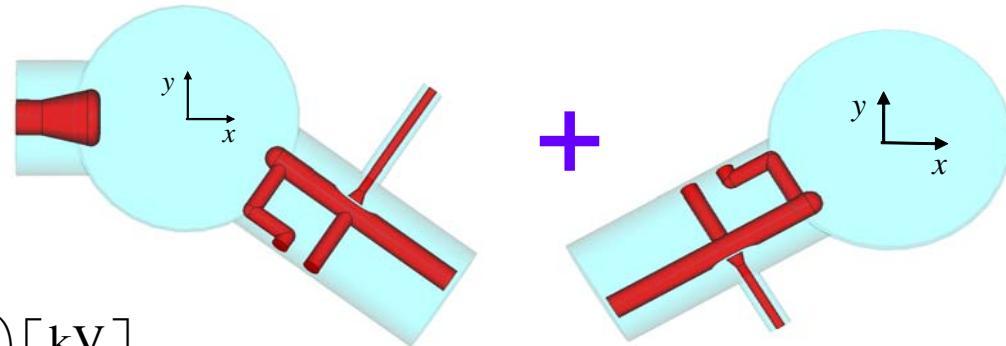

$$\mathbf{r}_c = \begin{pmatrix} 5.3 \\ 7.9 \end{pmatrix} \text{ mm}$$

$$\|\mathbf{k}_\perp\|_{\min} = 5e-5 \frac{\text{kV}}{\text{nC}}$$

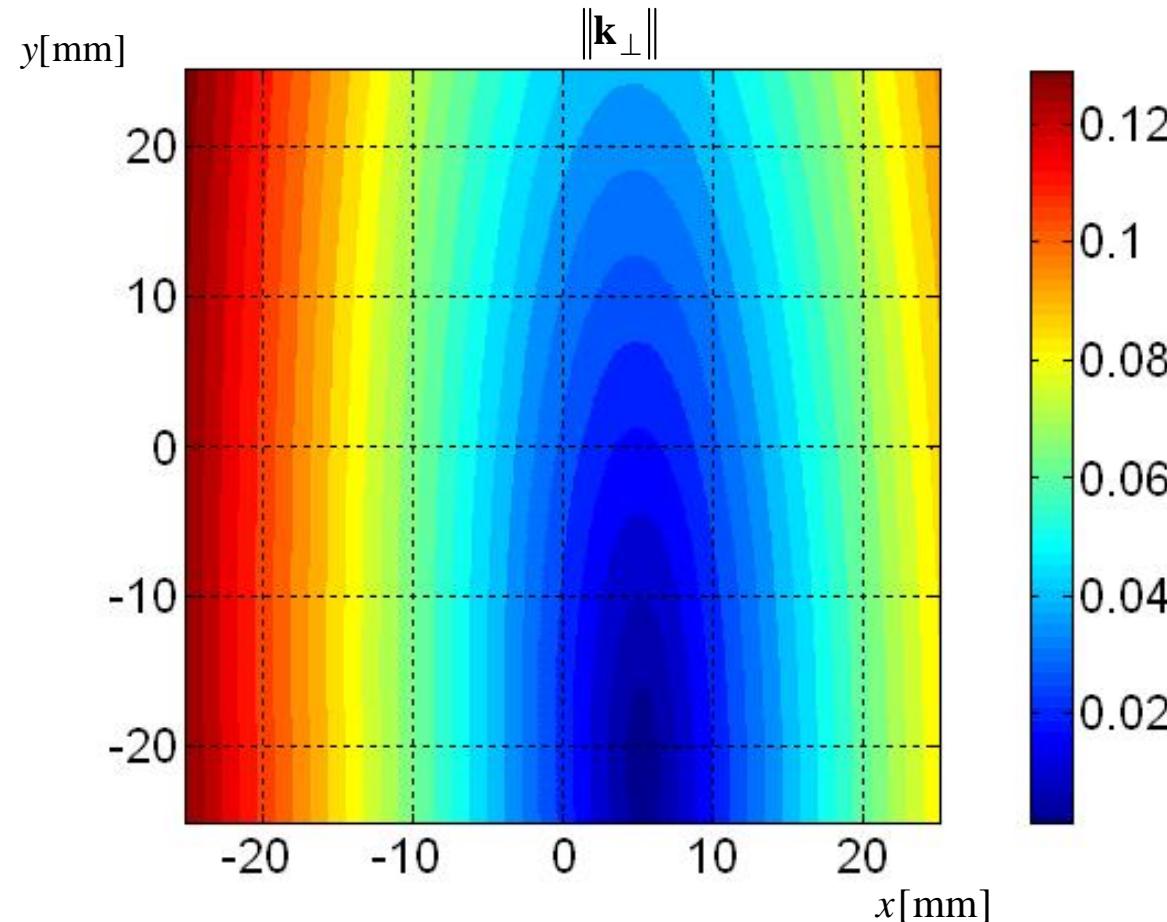

Kick near to the axis

+

$$\mathbf{k}_\perp(x, y) = \begin{pmatrix} -0.021 \\ -0.019 \end{pmatrix} + \begin{pmatrix} 4.3 & 0.07 \\ 0.03 & -0.9 \end{pmatrix} \begin{pmatrix} x[\text{m}] \\ y[\text{m}] \end{pmatrix} \left[\frac{\text{kV}}{\text{nC}} \right]$$

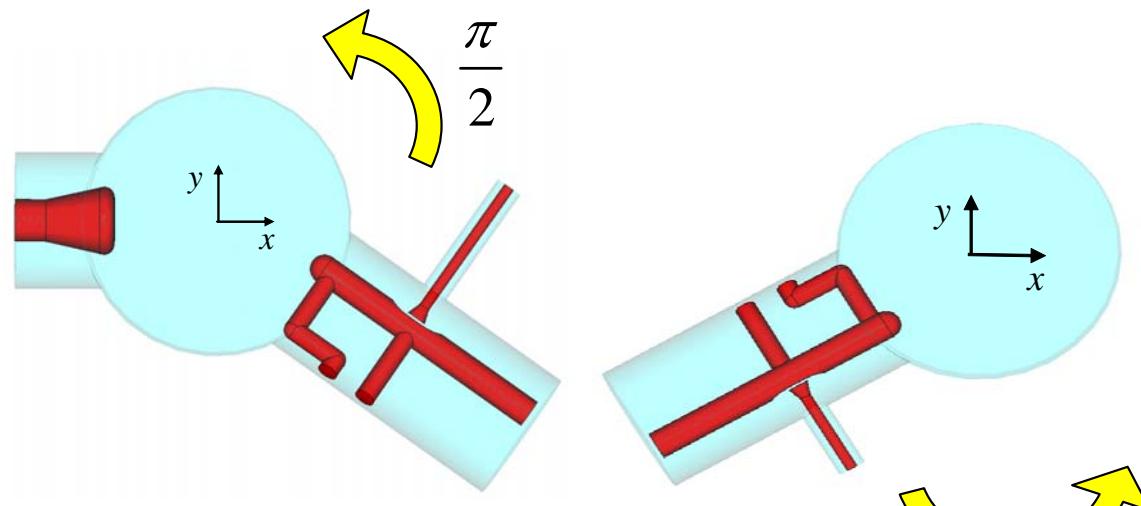

$$\mathbf{r}_c = \begin{pmatrix} 5.3 \\ -21.3 \end{pmatrix} \text{mm}$$

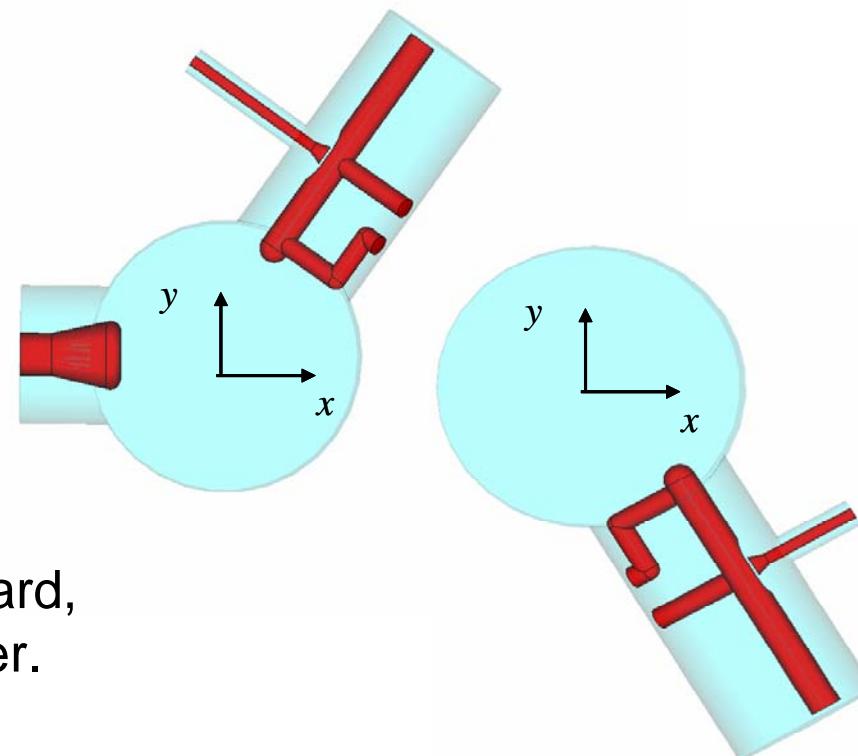

$$\|\mathbf{k}_\perp\|_{\min} = 5e-5 \frac{\text{kV}}{\text{nC}}$$

How to compensate the kick on the axis?

old

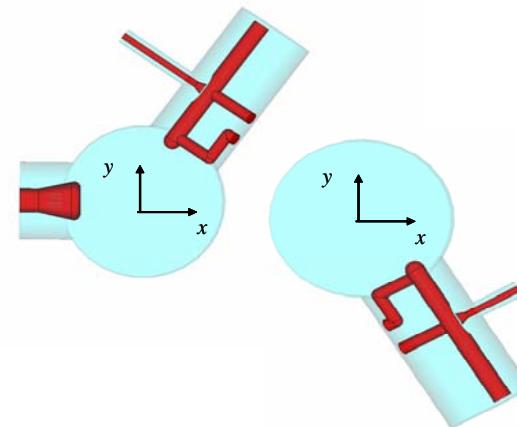

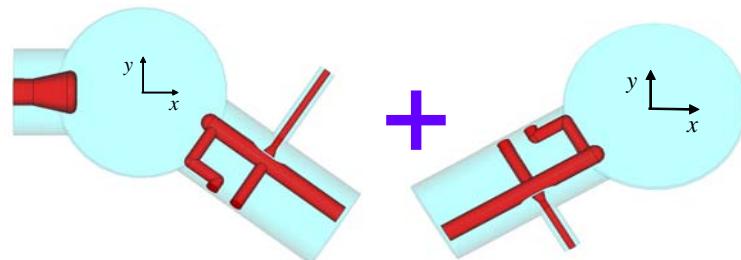

new

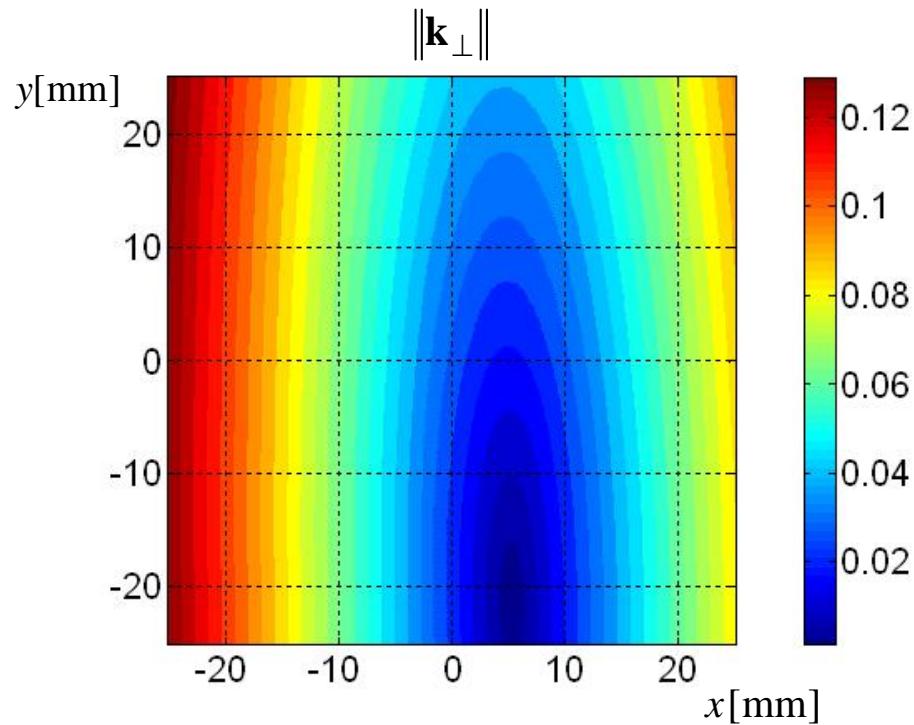

We have rotated by 90 grad,
but 92.5 is possible better.

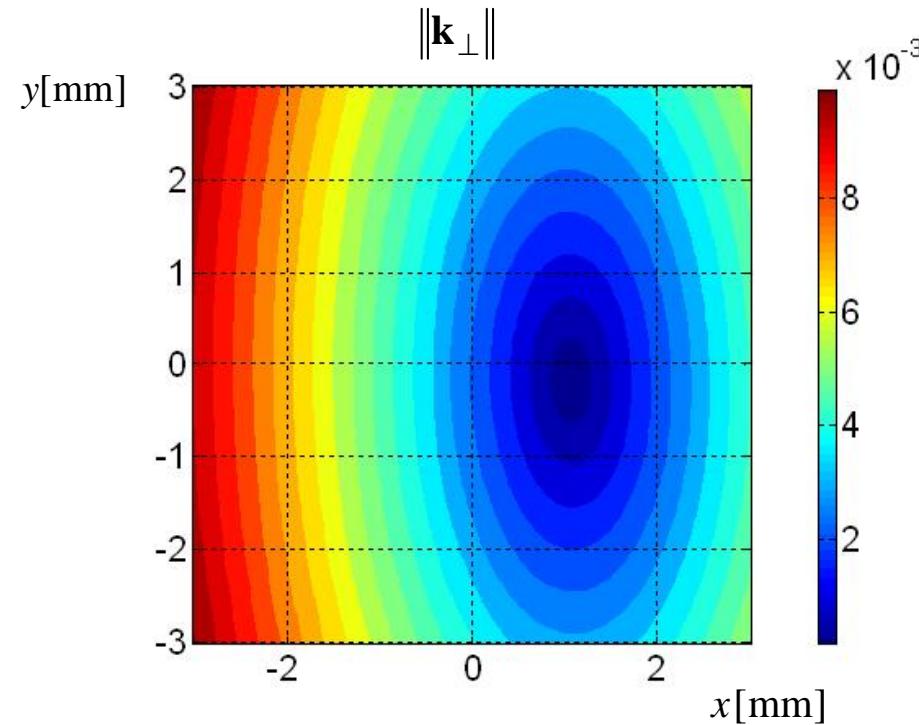

Kick for the new orientation

$$\mathbf{k}_\perp(x, y) = \begin{pmatrix} -0.021 \\ -0.019 \end{pmatrix} + \begin{pmatrix} 4.3 & 0.07 \\ 0.03 & -0.9 \end{pmatrix} \begin{pmatrix} x[\text{m}] \\ y[\text{m}] \end{pmatrix} \begin{pmatrix} \text{kV} \\ \text{nC} \end{pmatrix}$$

$$\mathbf{k}_\perp(x, y) = \begin{pmatrix} -0.0025 \\ -0.0002 \end{pmatrix} + \begin{pmatrix} 2.33 & 0.04 \\ -0.02 & 1.1 \end{pmatrix} \begin{pmatrix} x[\text{m}] \\ y[\text{m}] \end{pmatrix} \begin{pmatrix} \text{kV} \\ \text{nC} \end{pmatrix}$$

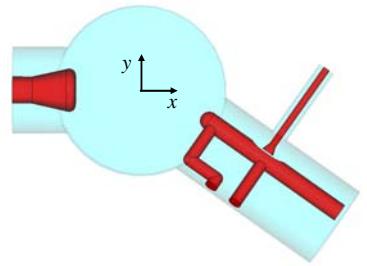

$$\mathbf{r}_c = \begin{pmatrix} 5.3 \\ -21.3 \end{pmatrix} \text{mm}$$

$$\|\mathbf{k}_\perp\|_{\min} = 5e-5 \frac{\text{kV}}{\text{nC}}$$

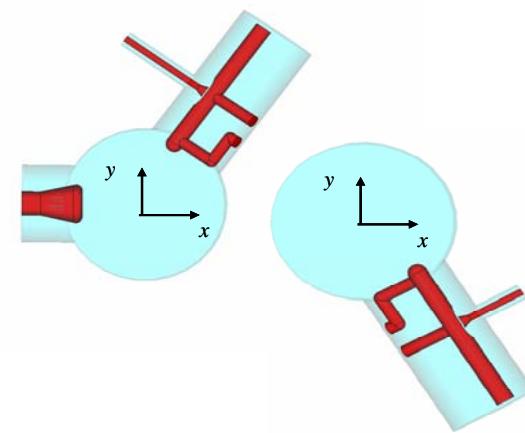

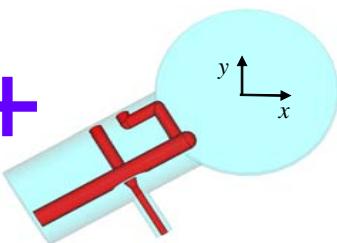

$$\mathbf{r}_c = \begin{pmatrix} 1.1 \\ -0.2 \end{pmatrix} \text{mm}$$

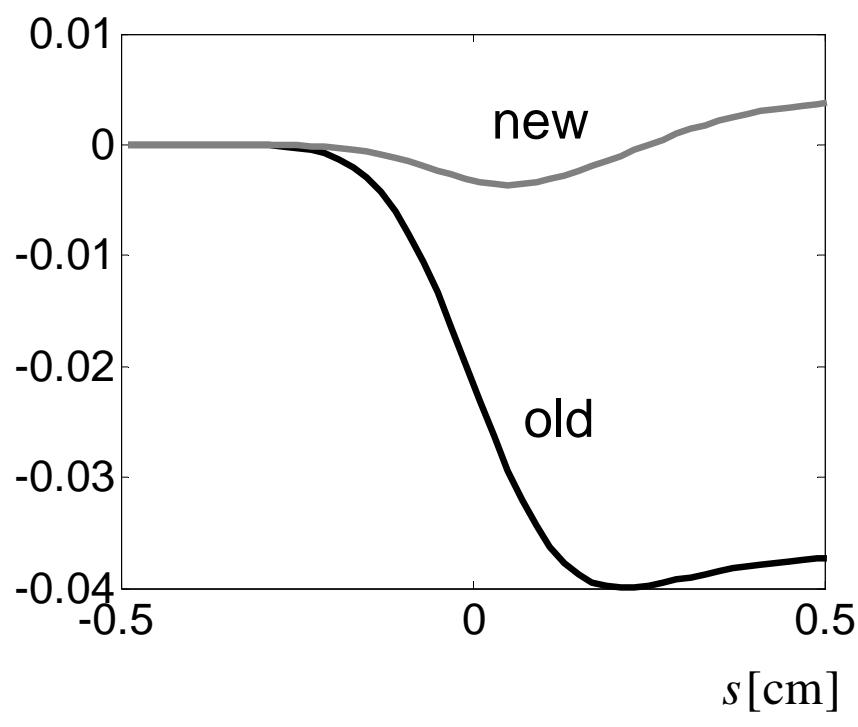

$$\|\mathbf{k}_\perp\|_{\min} = 8e-5 \frac{\text{kV}}{\text{nC}}$$

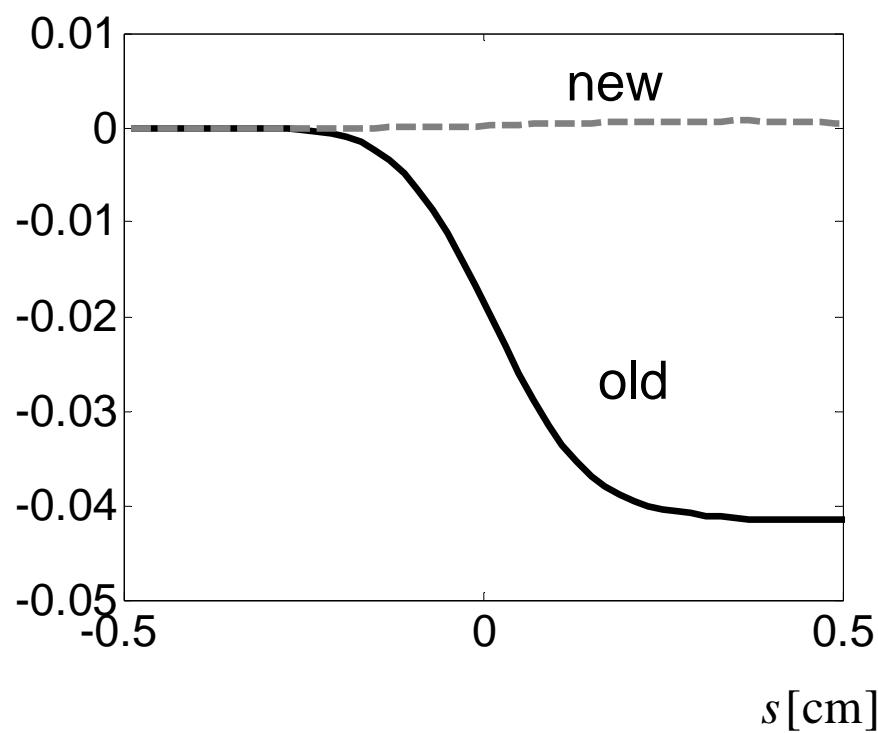

+

$$W_x(0,0) \left[\frac{\text{kV}}{\text{nC} \cdot \text{m}} \right]$$

$$W_y(0,0) \left[\frac{\text{kV}}{\text{nC} \cdot \text{m}} \right]$$

Coupler vs. TESLA Cavity in Cryomodule

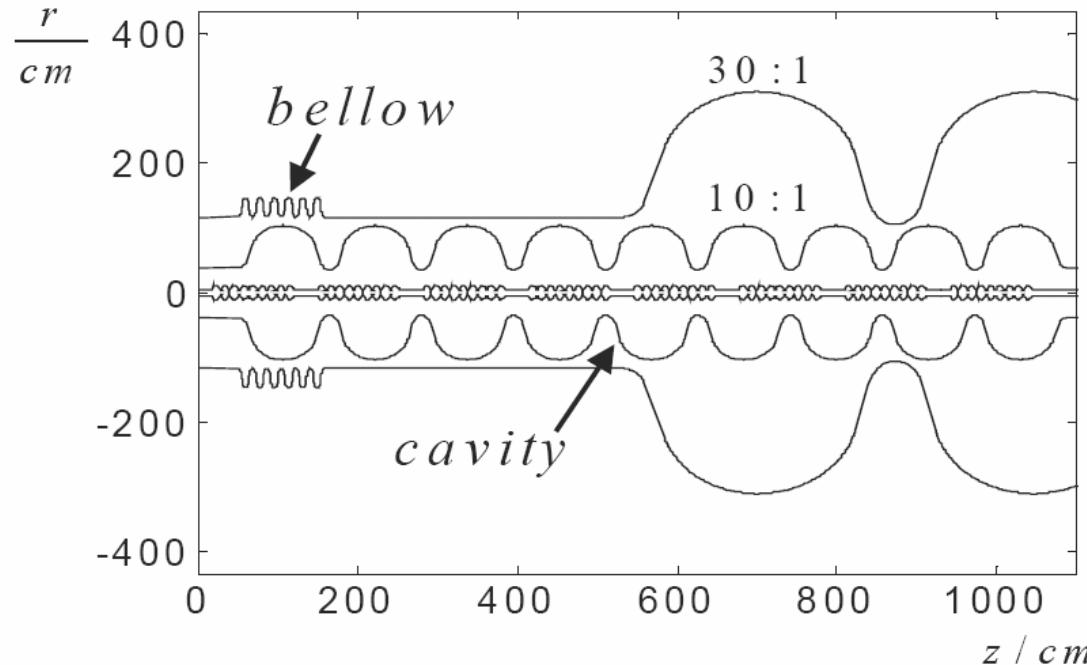

Fig1. Geometry of the TESLA cryomodule.

The TESLA linac consists of a long chain of cryomodules. The cryomodule of total length 12 m contains 8 cavities and 9 bellows as shown in Fig.1. The iris radius is 35 mm and beam tubes radius is 39 mm.

$$w_{\perp}(s) = 10^3 \left(1 - \left(1 + \sqrt{\frac{s}{s_1}} \right) \exp \left(-\sqrt{\frac{s}{s_1}} \right) \right) \left[\frac{V}{pC \cdot m \cdot module} \right] \quad \text{where } s_0 = 1.74 \cdot 10^{-3} \text{ and } s_1 = 0.92 \cdot 10^{-3}$$

Coupler vs. TESLA Cavity in Cryomodule

Kick from cryomodule in kV/nC/m

$\sigma, \mu m$	Numerical	Analytical	TDR
1000	138	137	153
700	109	108	130
500	85.4	85.1	111
400	72.5	72.2	99.6
300	58.1	57.9	86.8
250	50.2	50.1	79.6
125	28.8	28.3	56.9
75	18.2	18.1	44.3
50	12.8	12.6	36.3

$$k_{cavity}^{300\mu m} = 0.0073 \left[\frac{\text{kV}}{\text{nC} \cdot \text{mm}} \right]$$

Kick from the couplers on the axis
(depends weakly on the bunch length)

$$\mathbf{k}_{\perp}^{old}(0,0) = \begin{pmatrix} -0.021 \\ -0.019 \end{pmatrix} \left[\frac{\text{kV}}{\text{nC}} \right]$$

$$\mathbf{k}_{\perp}^{new}(0,0) = \begin{pmatrix} -0.0025 \\ -0.0002 \end{pmatrix} \left[\frac{\text{kV}}{\text{nC}} \right]$$

$$\frac{\|\mathbf{k}_{\perp}^{old}(0,0)\|}{k_{cavity}^{300\mu m}} \approx 4 [\text{mm}]$$

$$\frac{\|\mathbf{k}_{\perp}^{new}(0,0)\|}{k_{cavity}^{300\mu m}} \approx 0.3 [\text{mm}]$$

Conclusion

- The kick on the axis from the couplers (in the design configuration) is equivalent to 4 mm offset of the TESLA cavity in cryomodule.
- Rotation of the HOM couplers by 90 grad allows to reduce the kick by factor 10.
