

# CMOS Mtg Introduction, 2017-05-09

Had a communication with AMS (through Fraunhofer) regarding the project status. Asked questions regarding

- 1) Base wafer material for CHESS-1 and CHESS-2. The claim is it is the same type.
- 2) They mentioned that CHESS-1 had “Ntubes” and CHESS-2 did not. Unclear what it is, it’s not in the documentation. (Misspelled Ntubs? But N-implants should be there...)

Asked if they measured any bulk differences, and for more information on Ntubes. No answer yet.

Some people cannot make this meeting: Herve, Jaya John, Su Dong. For Su Dong Tuesday morning has a permanent overlap of 2 others. Mon/Wed/Thu would be ok. Are people amenable to changing the day of the week?
