Introduction to PAT (from Roger Wolf)

- The following slides are taken from June PAT tutorial
- Please have a look at the tutorial pages for longer introduction to PAT:
<http://indico.cern.ch/conferenceOtherViews.py?view=standard&confId=57695>

Introduction to PAT (from Roger Wolf)

Physics
Analysis
Toolkit

The Physics Analysis Toolkit

Interface

- b/w Reconstruction & Analysis Level
- simplifies access via **DataFormats**
- canalizes expertise (POG & PAG contacts)
- crossing point between POGs & PAGs ('vertical integration')

Common Tool

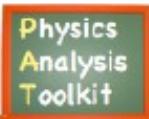

- approved algorithms & sensible defaults
- synergy (everybody can profit from recent developments)
- quick start into analysis for beginners

Common Format

- facilitates transfer & comparisons
- PAG common configurations
- sustained provenance

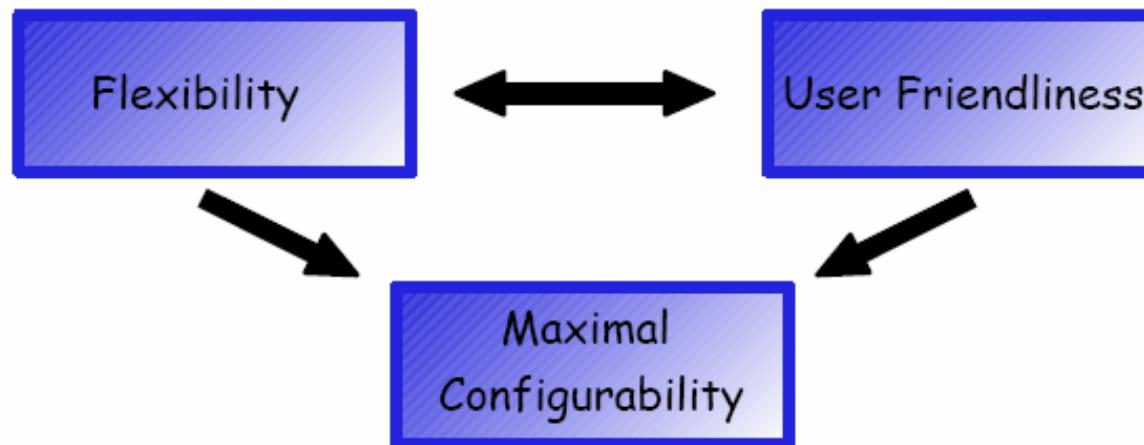

3 / 29

Introduction to PAT (from Roger Wolf)

Concepts

- Make use of the modular structure of CMSSW (in full FW/FWLite)
- Provide easy access via member functions in **DataFormats**
- Serve 80% of all analyses in CMS

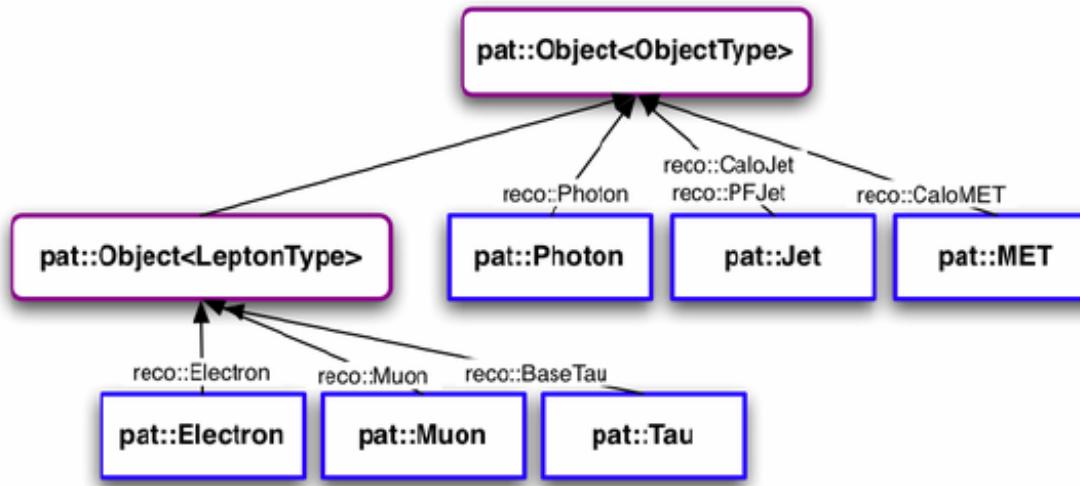

Introduction to PAT (from Roger Wolf)

Physics
Analysis
Toolkit

Data Formats

- DataFormats in PatCandidates

- All `pat::Objects` inherit from their corresponding `reco::Candidates`
- A `pat::Object` is a `reco::Object` (plus more)

10 / 29

Introduction to PAT (from Roger Wolf)

Physics
Analysis
Toolkit

How to access pat::Objects

- For an examples with a FWLiteAnalyzer have a look at:
[SGuidePATExamplesFWLite](#)

```
// load framework libraries
gSystem->Load( "LibFWCoreFWLite" );
AutoLibraryLoader::enable();

// loop the events
unsigned int iEvent=0;
fwlite::Event event(inFile);
for(event.toBegin(); !event.atEnd(); ++event, ++iEvent){
    // break loop after end of file is reached
    // or after 1000 events have been processed
    if( iEvent==1000 ) break;

    // simple event counter
    if(iEvent>0 && iEvent%100==0){
        std::cout << " processing event: " << iEvent << std::endl;
    }

    // fwlite::Handle to to muon collection
    fwlite::Handle<std::vector
```

Never forget to enable
the AutoLibraryLoader

Loop the events of an
input file

Receive the jet collection
by label

Introduction to PAT (from Roger Wolf)

Introduction to PAT (from Roger Wolf)

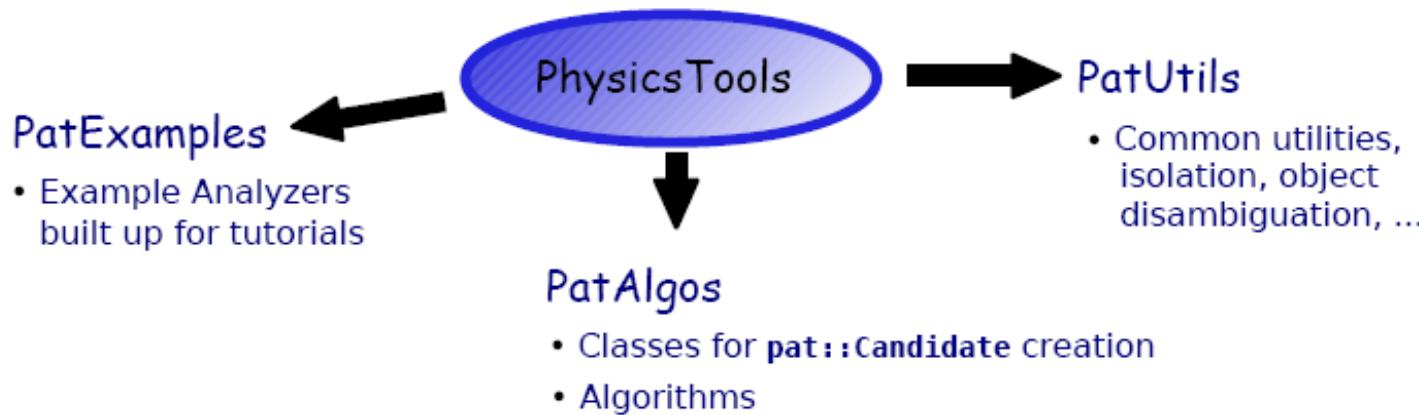

Code Location

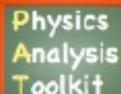

- All code located in the CMSSW domain distributed over two systems

- **DataFormats/PatCandidates**

- Structures and Candidate Classes
 - `pat::Photon, pat::Electron, pat::Muon, pat::Jet, pat::MET, ...`

Introduction to PAT (from Roger Wolf)

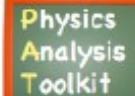

AOD/Reco Steps

- Pre-pat::Candidate Production steps on RECO/AOD input
- It happens that 'old'-CMSSW version input files lack finest newest, objects/algorithms
 - BTag algorithms
 - Tau discriminators
 - Electron isolation from RecHits
 - Electron Id, ...

```
# Sequences needed to deliver external information for objects
# You can remove modules from here if you don't need these features
patAODExtraReco = cms.Sequence(
    #patBTagging +           # Empty sequences not supported yet
    patElectronId +
    patElectronIsolation +
    patJetMETCorrections +
    patJetTracksCharge +
    #patMuonIsolation +     # Empty sequences not supported yet
    #patPhotonID +          # Empty sequences not supported yet
    patPhotonIsolation +
    #patTauDiscrimination + # Empty sequences not supported yet
    patPFCandidateIsoDepositSelection +
    patPFTauIsolation
)
```

This sequence fills up this gap

Introduction to PAT (from Roger Wolf)

selectedLayer1Candidates

- Simple selection via string parser:

```
# module to select Muons
# See https://twiki.cern.ch/twiki/bin/view/CMS/SWGuidePhysicsCutParser
# on how to use the cut-string
#
# These are only dummy cuts
selectedLayer1Muons = cms.EDFilter("PATMuonSelector",
    src = cms.InputTag("allLayer1Muons"),
    cut = cms.string('pt > 0. & abs(eta) < 12.')
)
```

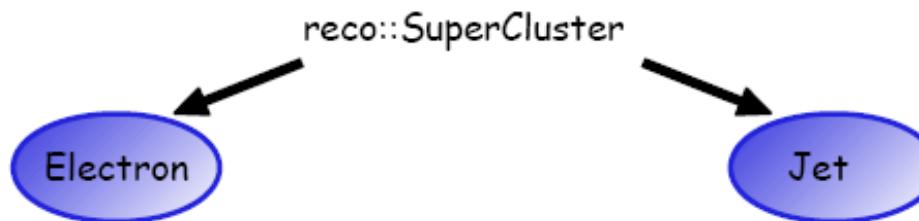

- Can use all kind of functions and all kind of member functions of the `pat::Candidate`
- For more details have a look at [SWGuidePhysicsCutParser](#)
- Results in [**selectedLayer1Candidates**](#) (std candidate collection of pat::Candidates w/o object cleaning)
- For the choice of standard selection strings have a look at [SWGuidePATConfiguration](#)

Introduction to PAT (from Roger Wolf)

Physics
Analysis
Toolkit

cleanLayer1Candidates

- What is object (cross) cleaning?

- A set of `PATCandidateCleaners` can help to resolve this double counting if desired
- Results in `cleanLayer1Candidates` (~~std candidate collection of pat::Candidates with object cleaning~~)
- For the standard configuration of these cleaners have a look at [SGuidePATConfiguration](#)

22 / 29

Access to the NAF

- Follow the instructions handed out on paper
(individual logins etc.)

What you should have done before the workshop...

All work will be done on the NAF.

o Detailed instructions are on the workshop webpage:

<https://indico.desy.de/getFile.py/access?resId=0&materialId=0&confId=1811>

The Monte Carlo files will be analysed using PAT.

Please install the version CMSSW-2-2-13 on the NAF:

On your workgroupserver at DESY or CERN get your proxy:

o voms-proxy-init -voms cms –rfc

Log on to the NAF:

o gsish cms.naf.desy.de

Once on the NAF, install the software:

o ini cmssw

o cmsrel CMSSW_2_2_13

o cd CMSSW_2_2_13/src

o cmsenv

Add the following packages before compiling

```
addpkg DataFormats/PatCandidates V03-26-07
addpkg PhysicsTools/PatAlgos V05-05-15
addpkg PhysicsTools/PatUtils V03-06-04
cvs up -r 1.2.2.6 PhysicsTools/PatAlgos/python/tools/tauTools.py
addpkg RecoTauTag global_PFTau_22X_V00-02-03
addpkg DataFormats/TauReco V00-12-01-02
addpkg CondFormats/JetMETObjects V01-08-04
addpkg PhysicsTools/RecoAlgos V08-06-16-06-02
addpkg PhysicsTools/PFCandProducer V03-01-16
cvs up -r 1.7 PhysicsTools/PFCandProducer/python/pfTaus_cff.py
addpkg RecoMET/Configuration V00-04-02-17
addpkg RecoMET/METAlgorithms V02-05-00-21
addpkg RecoMET/METProducers V02-08-02-17
addpkg DataFormats/METReco V00-06-02-09
addpkg DataFormats/MuonReco V07-02-12-03
addpkg JetMETCorrections/Type1MET VB04-00-02-04
addpkg RecoJets/JetAssociationAlgorithms V01-04-03
addpkg JetMETCorrections/Algorithms V01-08-02-01
addpkg JetMETCorrections/Configuration V01-08-15
addpkg JetMETCorrections/JetPlusTrack V03-02-06
addpkg JetMETCorrections/Modules V02-09-02
```

Or have a look here:
https://twiki.cern.ch/twiki/bin/view/CMS/SWGuidePATRecipes#CMSSW_2_2_X_with_PAT_version_2

Last but not least...

... compile!

```
> cd CMSSW_2_2_13/src  
> cmsenv  
> scramv1 b -j11          (-j11 for 8 cores, -j5 for 4 cores)
```

If you are ready with compiling, you are almost done.
Set up your rootlogon-file for the FWLite (see next page)

Setting up your Rootlogon for FWLite (from Workbook)

rootlogon.C:

```
{  
// Set up FW Lite for automatic loading of CMS libraries  
// and data formats. As you may have other user-defined setup  
// in your rootlogon.C, the CMS setup is executed only if the CMS  
// environment is set up.  
TString cmsswbase = getenv("CMSSW_BASE");  
if (cmsswbase.Length() > 0) {  
//  
// The CMSSW environment is defined (this is true even for FW Lite)  
// so set up the rest.  
//  
cout << "Loading FW Lite setup." << endl;  
gSystem->Load("libFWCoreFWLite.so");  
AutoLibraryLoader::enable();  
gSystem->Load("libDataFormatsFWLite.so");  
gSystem->Load("libDataFormatsPatCandidates.so");  
}  
}  
.rootrc:  
Rint.Logon: $(HOME)/rootlogon.C
```

You can copy both files from:
~isabell/public/Workshop

... and enjoy the reception tonight!!!
