

Research Data and Management in Environmental Sciences - Characteristics, Status and Challenges

Tuesday 29 August 2017 13:20 (30 minutes)

Research in environmental sciences is widely 'digitized' and a plethora of approaches and initiatives for environmental (research) data management and infrastructures established. However, still a number of issues hinder seamless data integration for environmental researchers and reproducible research is far from being reality.<p>

This contribution will give an overview on the current status, list some promising approaches as well as current r&d challenges.

Presenter: Prof. BERNARD, Lars
