

Dark Matter Production in an Early Matter Dominated Era

Wednesday 23 May 2018 17:10 (20 minutes)

We investigate dark matter (DM) production in an early matter dominated era where a heavy long-lived particle decays to radiation and DM. In addition to DM annihilation into and thermal DM production from radiation, we include direct DM production from the decay of the long-lived particle.

Presenter: Mr HAJKARIM, Fazlollah (BCTP, University of Bonn)

Session Classification: Parallel Session on Astro-DM I
