

Mass Degeneracies in Extended Higgs Sectors

Tuesday 22 May 2018 14:00 (20 minutes)

Mechanisms that yield mass degeneracies in extended Higgs sectors with multiple Higgs doublets are examined. Some puzzling features of a recent 3HDM constructed by Ivanov and Silav are considered that appear to be connected to the mass degeneracies of their model.

Presenter: Prof. HABER, Howard (Santa Cruz Institute for Particle Physics)

Session Classification: Parallel Session Higgs and Flavor Model Building
