DESY Zeuthen, 01.09.2017.

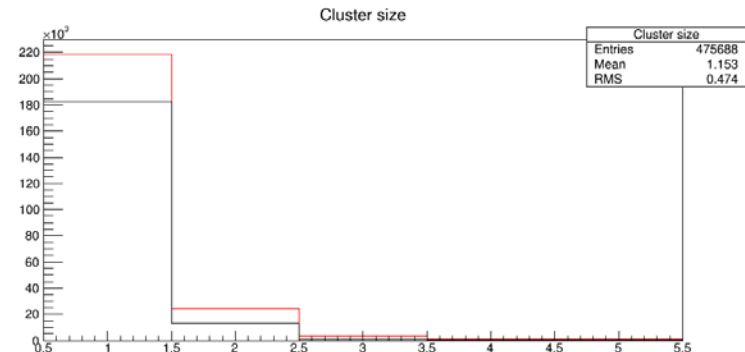

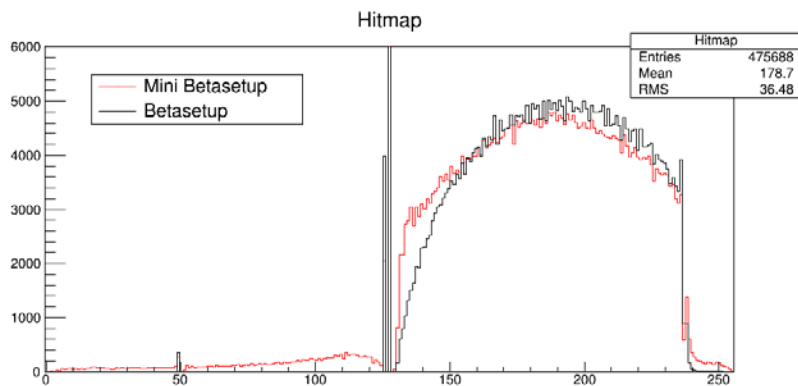

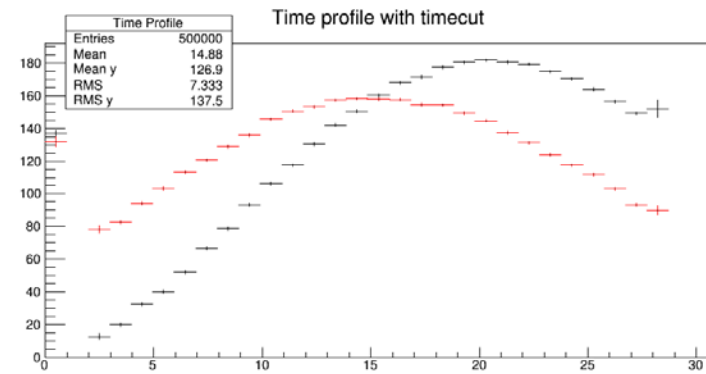

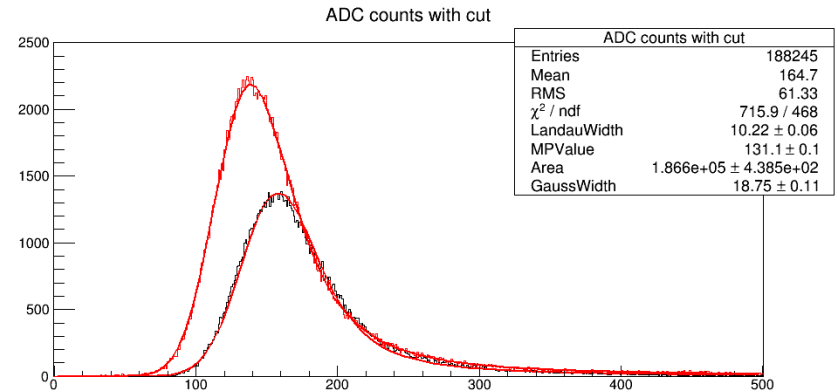

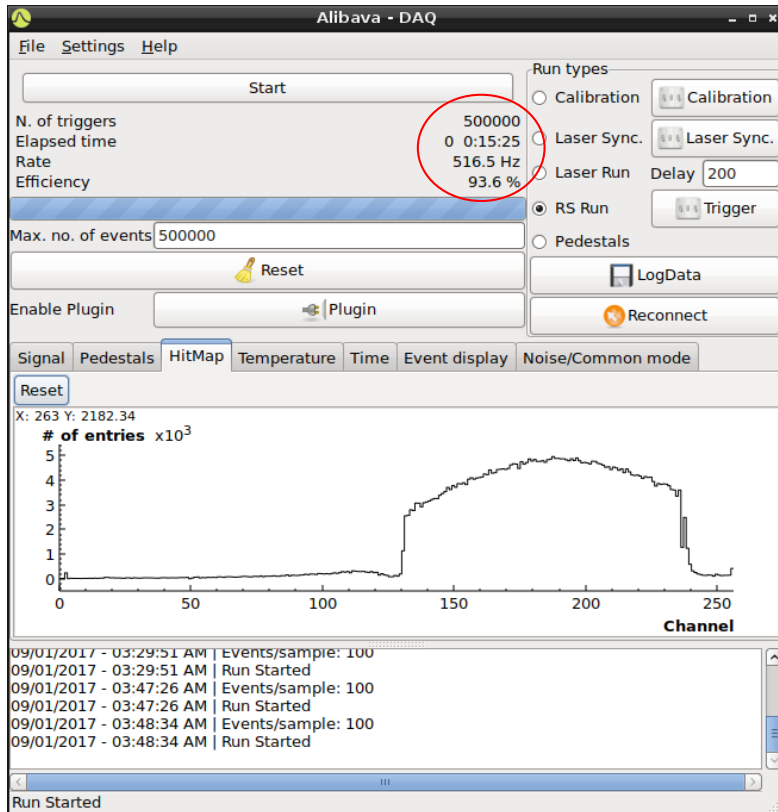

Mini Beta Setup – 1st tests.

Advantages:

- much **smaller** (adapted for mini sensors)
- very **portable** (USB powered PMT power supply, etc.)
- can also be used in **test beam**
- much **faster** in both DAQ (owing to better collimation/higher event rate) and temperature control
- more even hit map (**better collimation**)

Mini Beta Setup – 1st tests.

Mentionable Hiccups 😊

Mini Beta Setup.
