

5th International Solar Neutrino Conference  
June 11 - 14, 2018  
TU Dresden

# Gas-jet targets for nuclear astrophysics

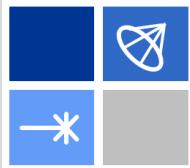

Konrad Schmidt<sup>1,2</sup>

<sup>1</sup> National Superconducting Cyclotron Laboratory, East Lansing, MI, USA

<sup>2</sup> Joint Institute for Nuclear Astrophysics – Center for the Evolution of the Elements, East Lansing, MI, USA

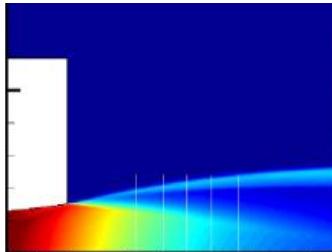

JINA-CEE  
NSF Physics Frontiers Center

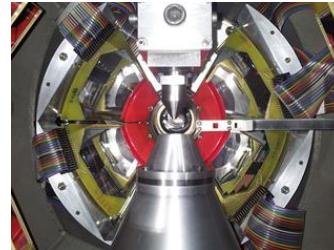

# Outline

Motivation for gas-jet targets

Review of supersonic gas-jet targets in nuclear physics

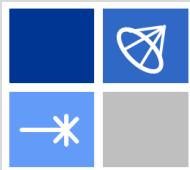

The JENSA gas-jet target

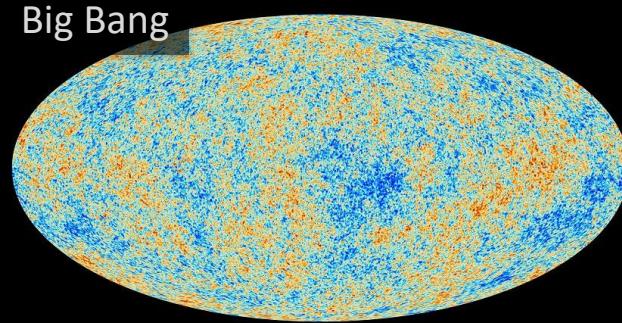

Perspective of future gas targets

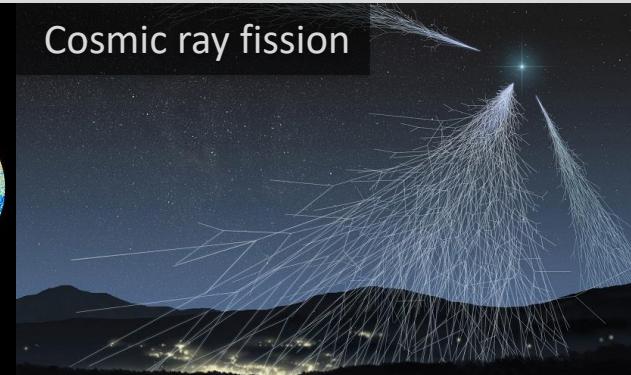

# Nucleosynthesis – Why a gas jet target?

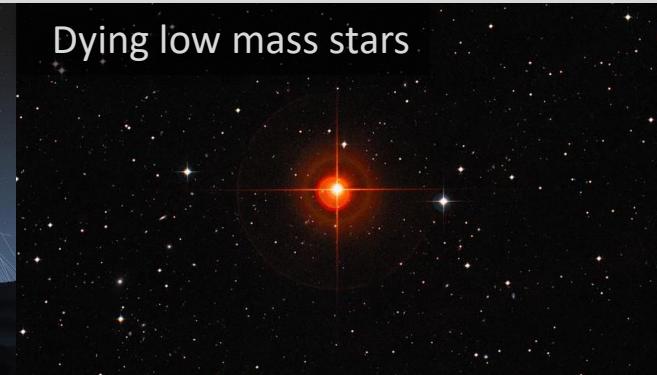

Big Bang

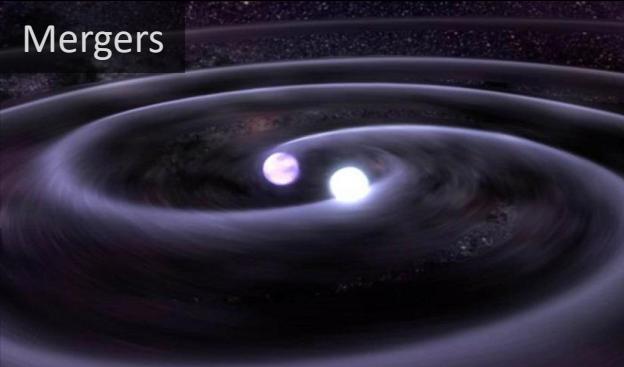

Cosmic ray fission

Dying low mass stars

Mergers

Novae

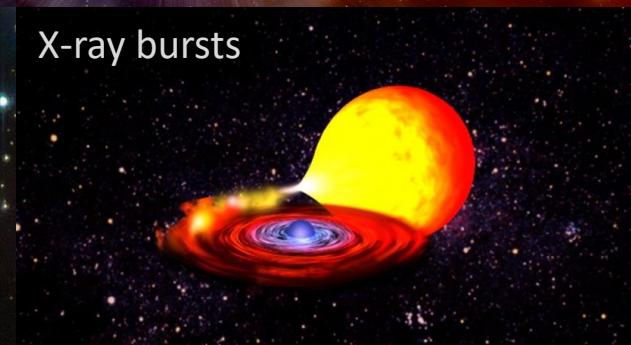

Stellar and solar fusion

Supernovae

X-ray bursts

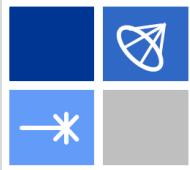

Images by NASA/ESA, astroart.org and jina.org

5th International Solar Neutrino Conference

# Nucleosynthesis – Why a gas jet target?

Big Bang

Cosmic ray fission

Dying low mass stars

reactions

Study reactions as  $(a,p)$ ,  
 $(a,a)$ ,  $(d,p)$ ,  $(d,d)$ ,  $(a,g)$ ,  
 $(p,g)$ , etc.

beam

High intensity stable  
beams in forward  
(inverse) kinematics

Low intensity  
radioactive beams in  
inverse kinematics

gas-jet target

Target system that can  
withstand high beam  
currents without  
significant deterioration

Chemically pure, highly  
localized targets with  
high density and low  
energy straggling

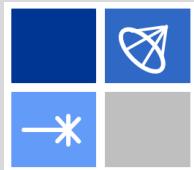

Images by NASA/ESA, astroart.org and jina.org

# Outline

Motivation for gas jet targets

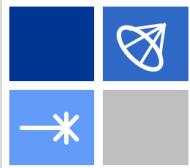

Review of supersonic gas-jet targets in nuclear physics

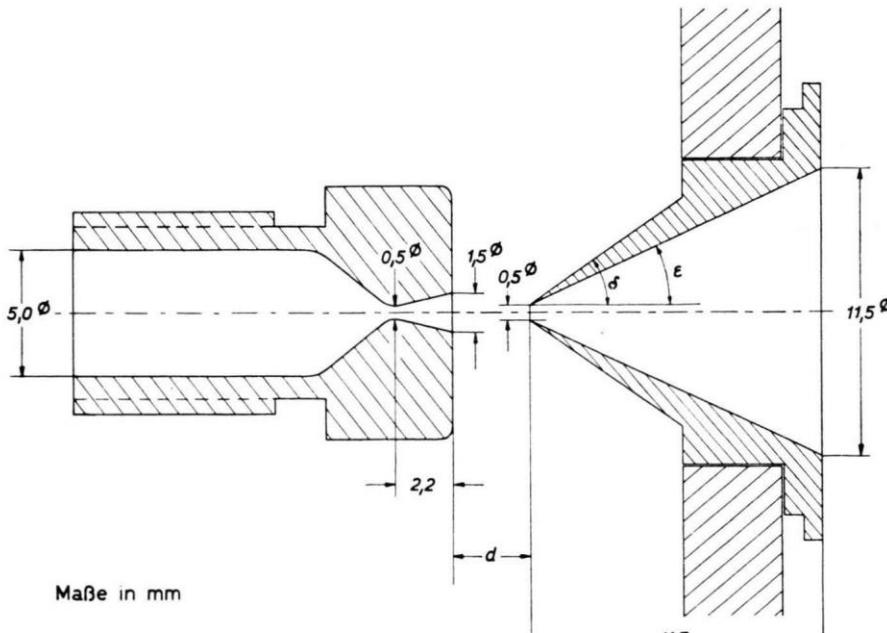

The JENSA gas-jet target

Perspective of future gas targets

# First gas-jet target for nuclear physics

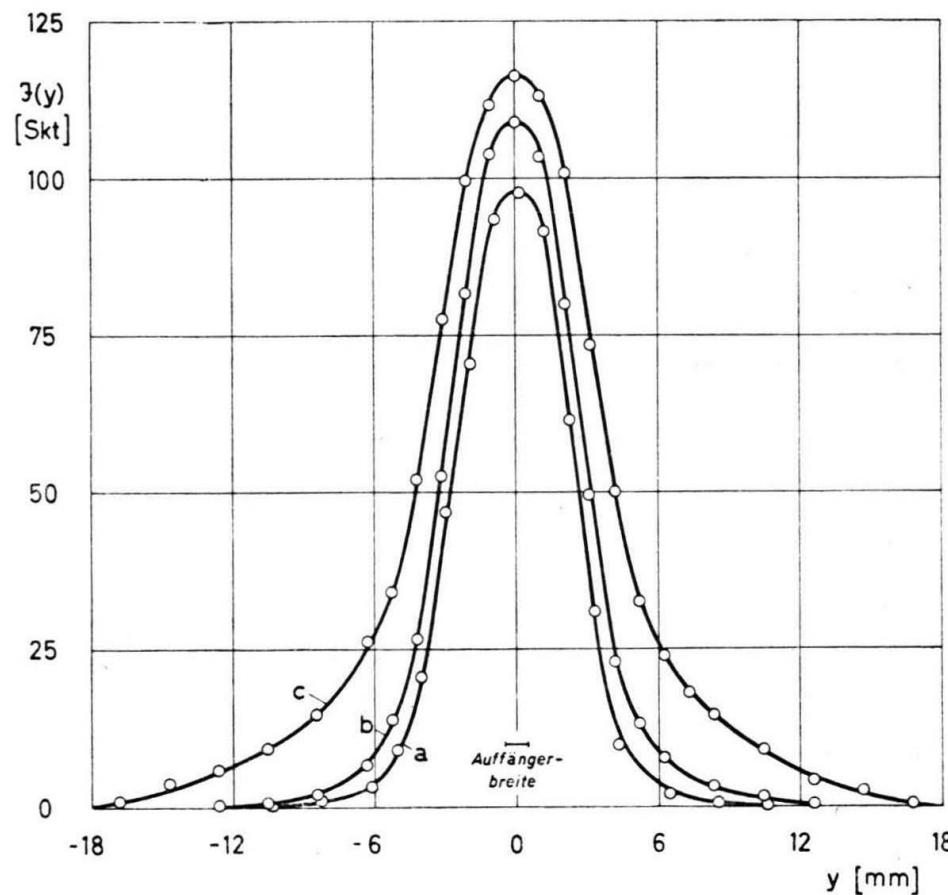

**Location and Year** Marburg (Germany) 1954

**Target gas** Hydrogen

**Particle flux**  $0.36 \times 10^{18}$  mol./( $\text{cm}^2\text{s}$ )

**Geometrical width** 6 mm

**Method** Pressure measurements

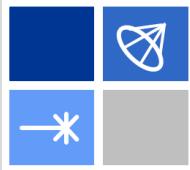

E.W. Becker and K. Bier, Z. Naturforsch. A 9, 975 (1954)

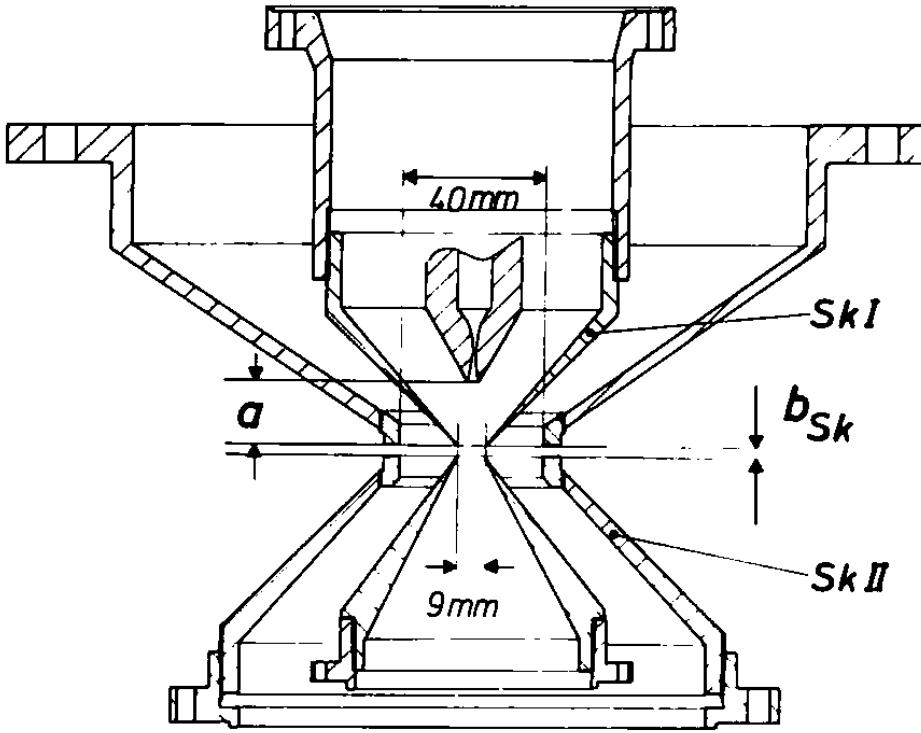

**JINA-CEE**

NSF Physics Frontiers Center

Konrad Schmidt: Gas-jet targets for nuclear astrophysics  
5th International Solar Neutrino Conference

# Argon and nitrogen gas-jet targets

**Location and Year** Frankfurt (Germany) 1979

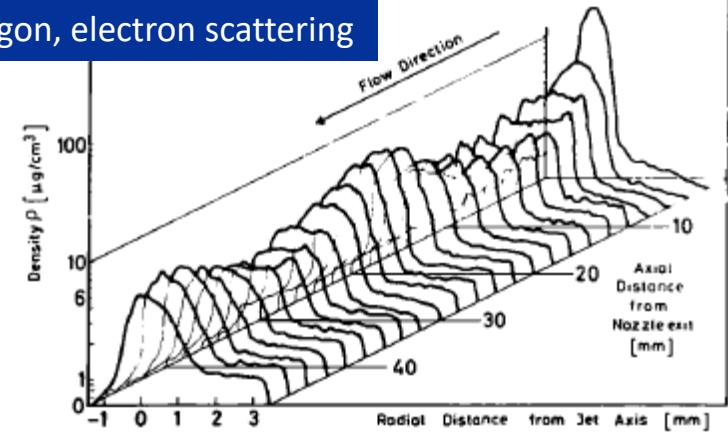

**Target gas** Argon and Nitrogen

**Particle density**  $7.3 \times 10^{18}$  atoms/cm<sup>2</sup>

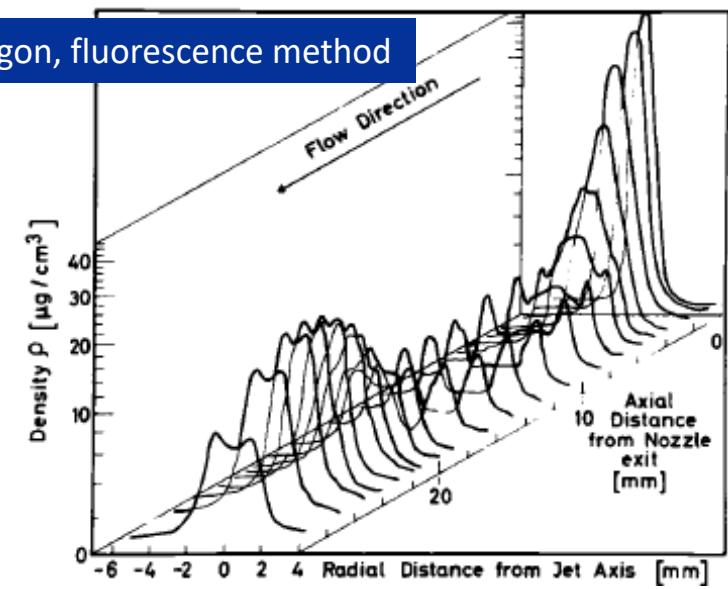

**Geometrical width** 3 mm

**Method** electron attenuation,  
fluorescence, and scattering

Argon, electron scattering

Argon, fluorescence method

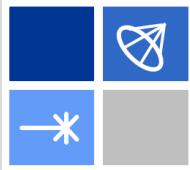

W. Tietsch *et al.*, Nucl. Instrum. Meth. **158**, 41 (1979)

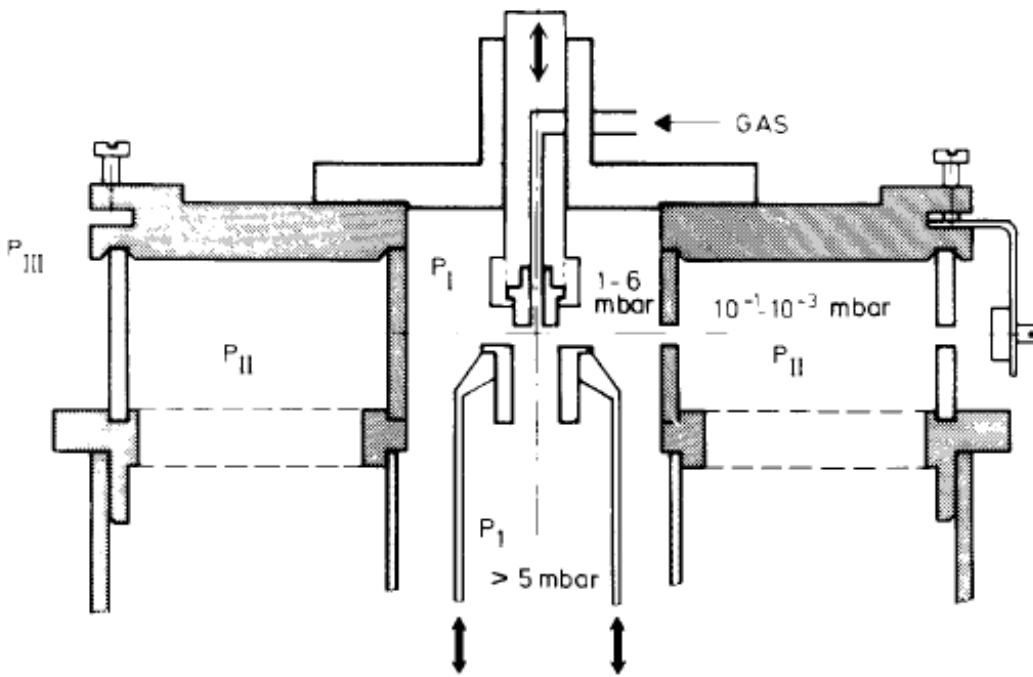

**JINA-CEE**

NSF Physics Frontiers Center

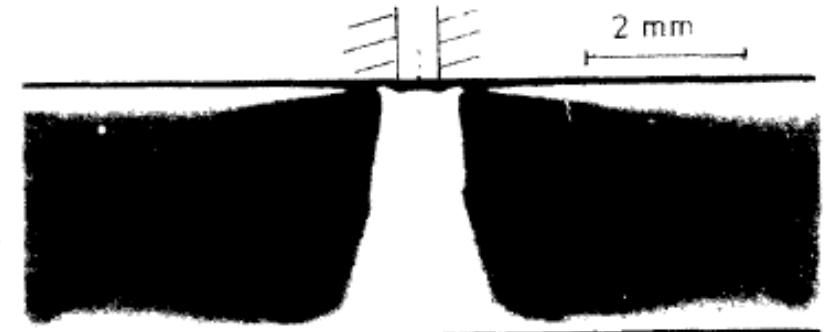

Konrad Schmidt: Gas-jet targets for nuclear astrophysics  
5th International Solar Neutrino Conference

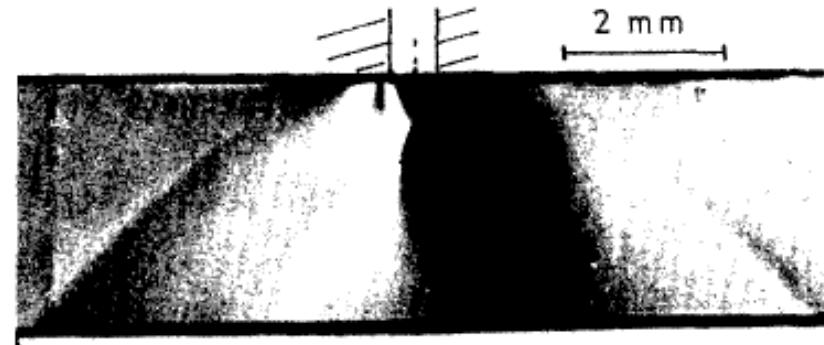

# High density but low uniformity

CYLINDRICAL NOZZLE

DENSITY GRADIENT ↓

DENSITY GRADIENT ←

**Location and Year** Erlangen (Germany) 1979

**Target gas** Argon, Nitrogen, Hydrogen

Recirculating

**Particle density**  $47.0 \times 10^{18}$  atoms/cm<sup>2</sup> for N

**Geometrical width** 1 - 10 mm

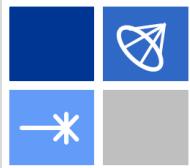

**Method**  $\alpha$  particle transmission and Schlieren photography

G. Bittner *et al.*, Nucl. Instrum. Meth. **161**, 1 (1979)

**JINA-CEE**  
NSF Physics Frontiers Center

Konrad Schmidt: Gas-jet targets for nuclear astrophysics

# Experiments with the Erlangen gas-jet

p-p scattering

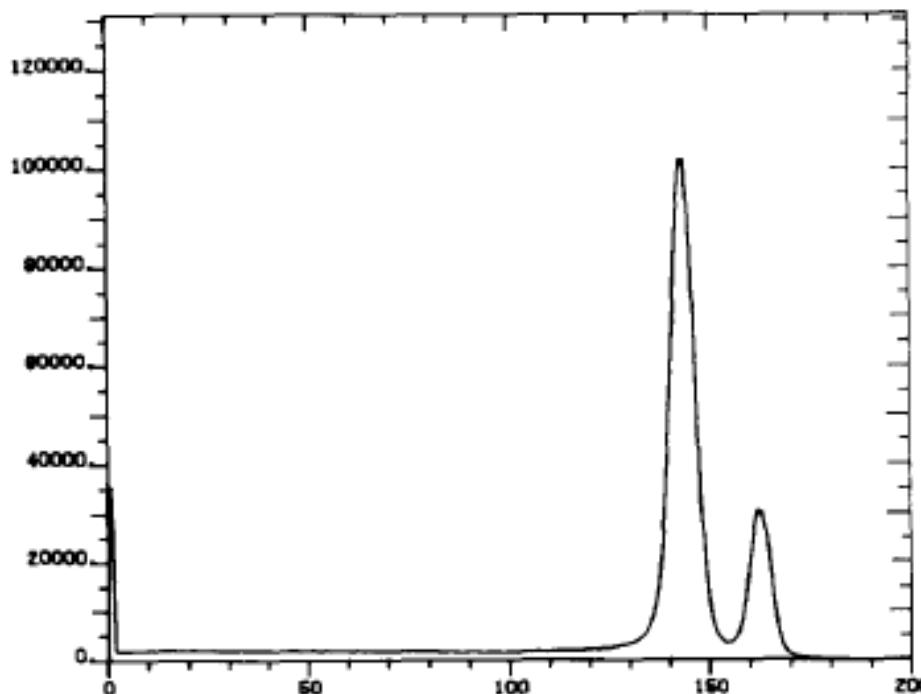

Fig. 13. Spectrum of the p-p reaction at  $\theta_{\text{lab}} = 7.5^\circ$ , the high energy peak corresponds to scattering on gas contaminations.

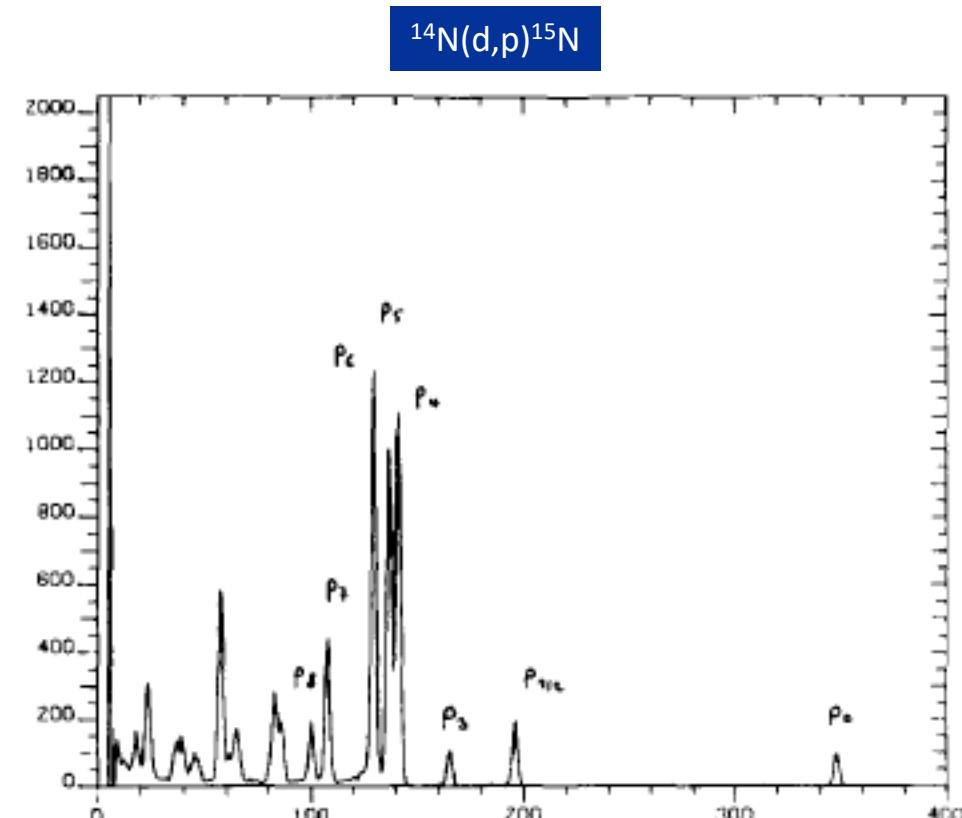

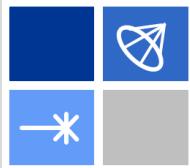

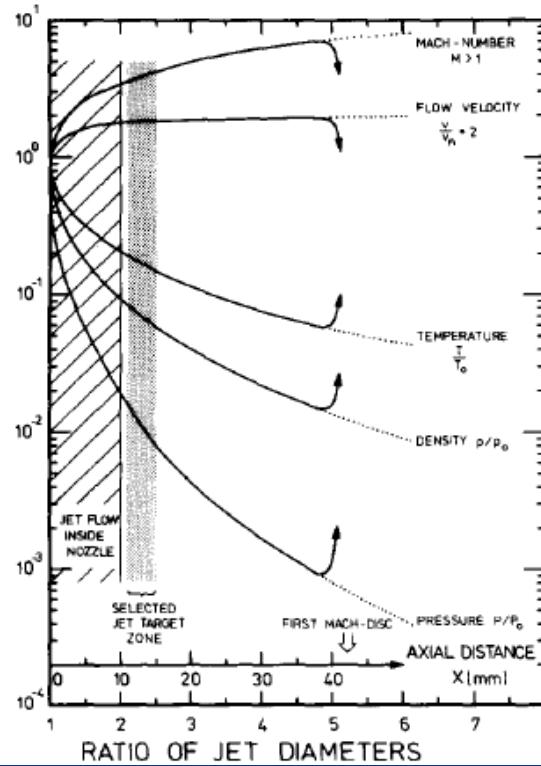

Fig. 14. Spectrum of the reaction  $^{14}\text{N}(\text{d}, \text{p})^{15}\text{N}$  at  $\theta_{\text{lab}} = 20^\circ$ .  
G. Bittner *et al.*, Nucl. Instrum. Meth. **161**, 1 (1979)

# The first helium-jet target

**Location and Year** Münster (Germany) 1982

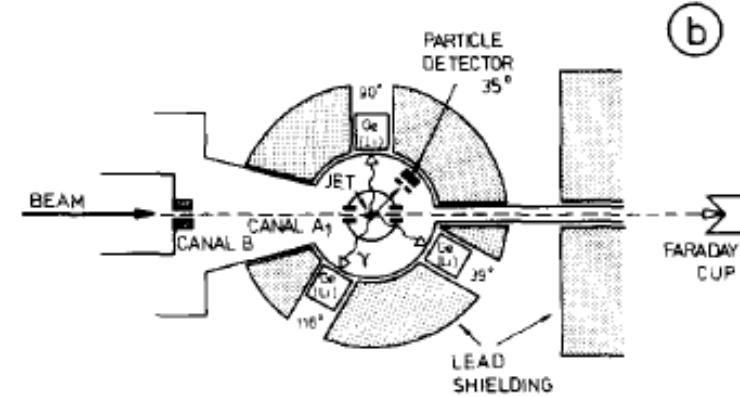

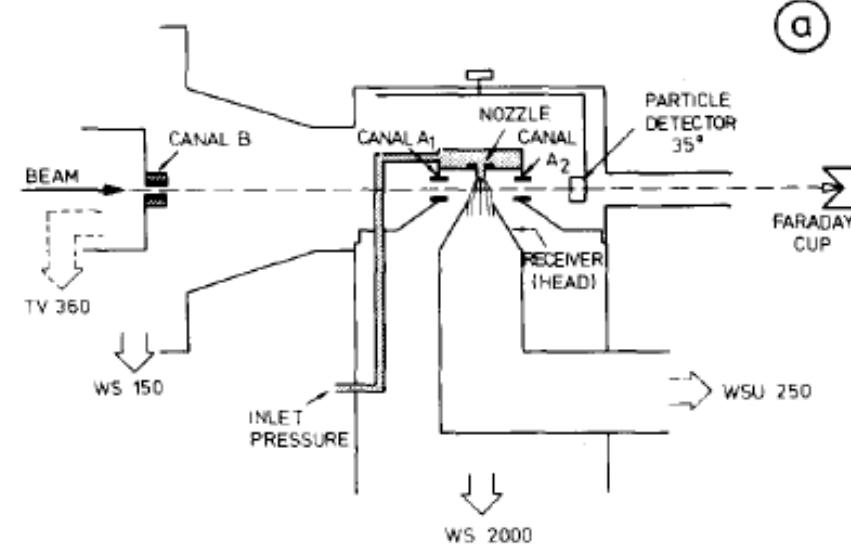

**Target gas**  $\text{D}_2$ ,  ${}^3\text{He}$ ,  ${}^4\text{He}$ ,  $\text{N}_2$ ,  $\text{O}_2$ ,  $\text{Ne}$ ,  $\text{Ar}$

**Particle density**  $0.34 \times 10^{17} \text{ atoms/cm}^2$  for  ${}^4\text{He}$

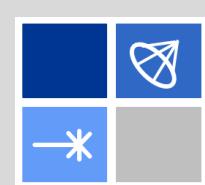

**Geometrical width** 2.5 mm

**Method** p elastic scattering and narrow resonance excitation functions

Recirculating

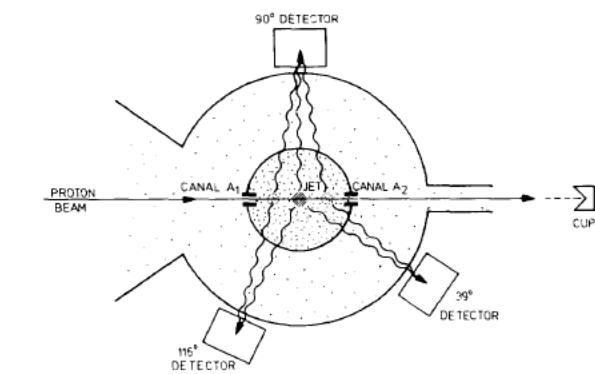

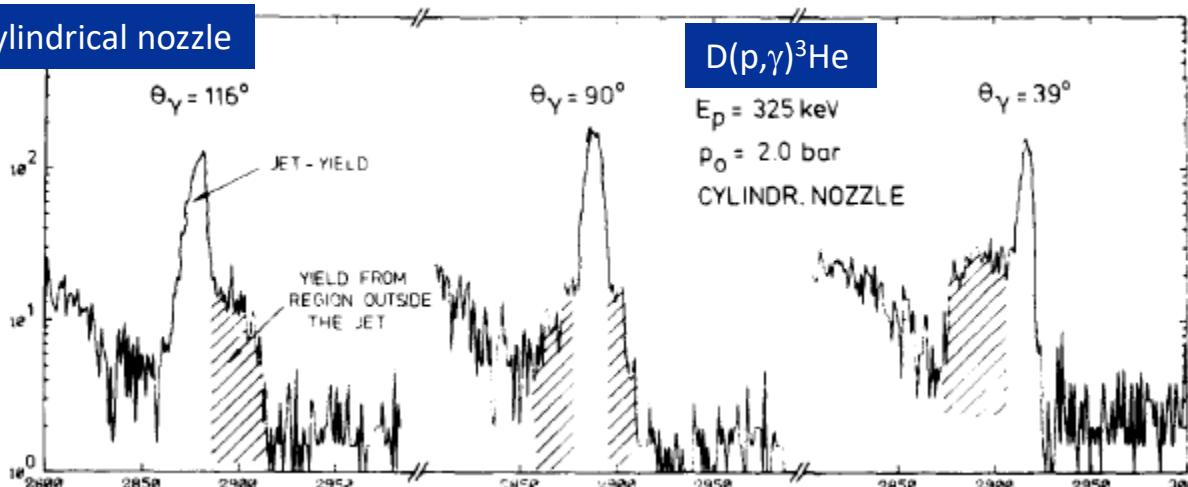

H.W. Becker *et al.*, Nucl. Instrum. Meth. **198**, 277 (1982)

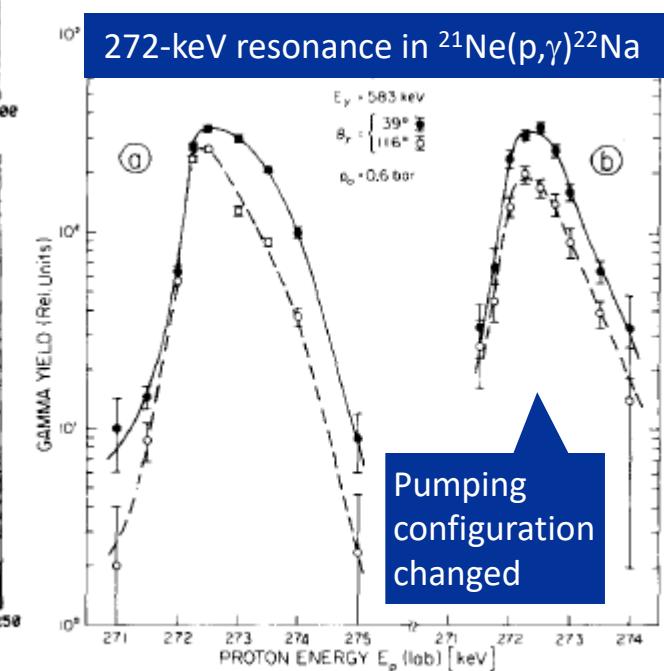

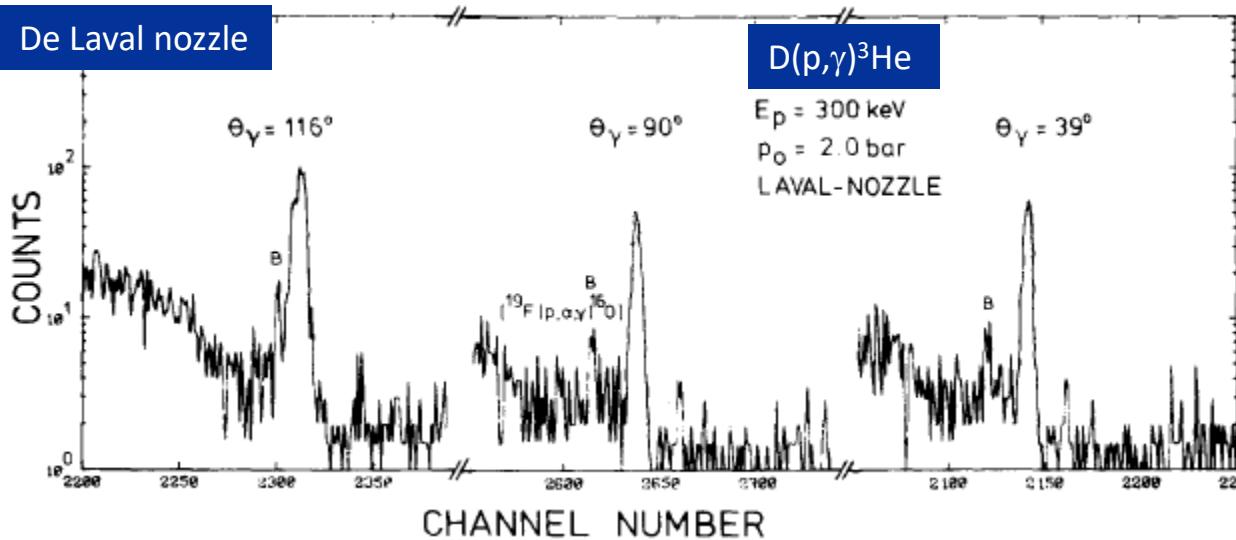

# $\gamma$ -ray spectra with the Münster gas jet

Cylindrical nozzle

De Laval nozzle

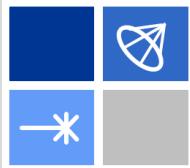

H.W. Becker *et al.*, Nucl. Instrum. Meth. **198**, 277 (1982)

# Gas target facility RHINOCEROS

Jet configuration can be switched to extended gas target with static pressures

<b>Location and Year</b>	Stuttgart (Germany) 1991
<b>Target gas</b>	D <sub>2</sub> , <sup>3</sup> He, <sup>4</sup> He, N <sub>2</sub> , O <sub>2</sub> , Ne, Ar
<b>Particle density</b>	0.078×10 <sup>18</sup> atoms/cm <sup>2</sup> for <sup>4</sup> He
<b>Geometrical width</b>	2.6 mm
<b>Method</b>	Estimated based on density calculation

# CFD calculations for HIPPO

## High Pressure Point like gas target

**Location and Year** Notre Dame (USA) 2012

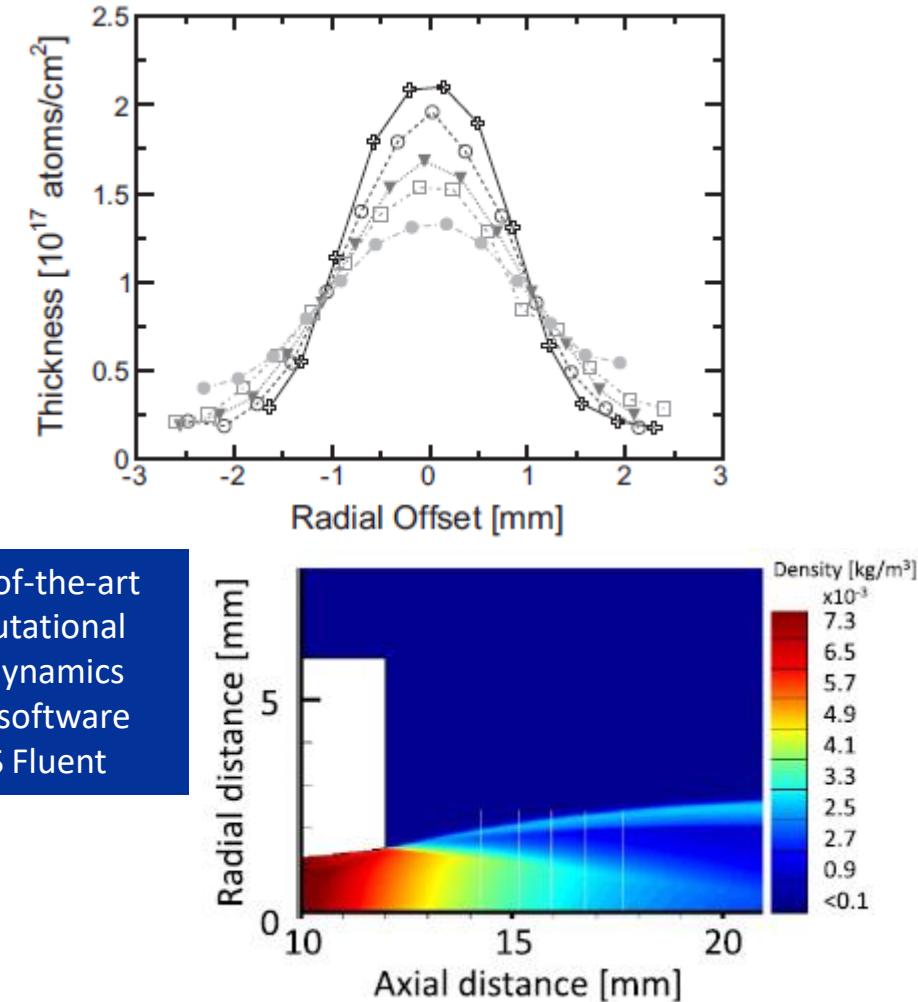

**Target gas** Helium, Nitrogen

**Particle density**  $0.259 \times 10^{18}$  atoms/cm<sup>2</sup> for  ${}^4\text{He}$

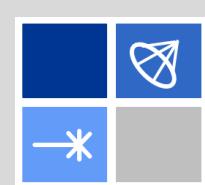

**Geometrical width** 2.2 mm

**Method**  $\alpha$  scattering and  $\alpha$  energy loss

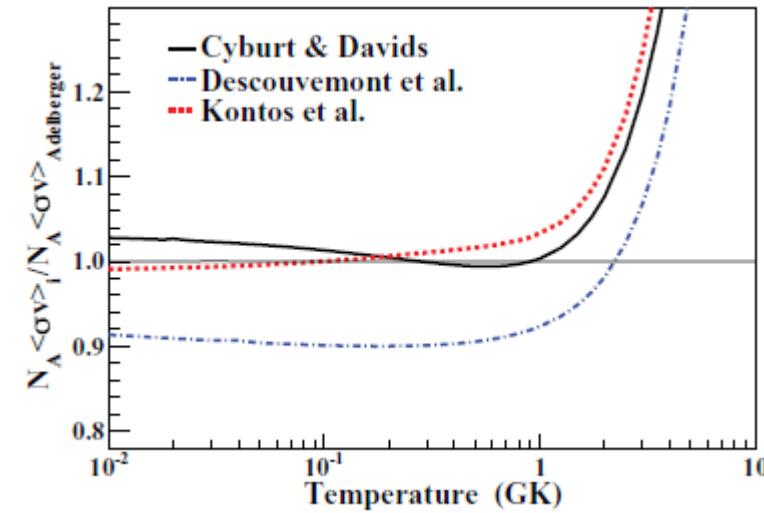

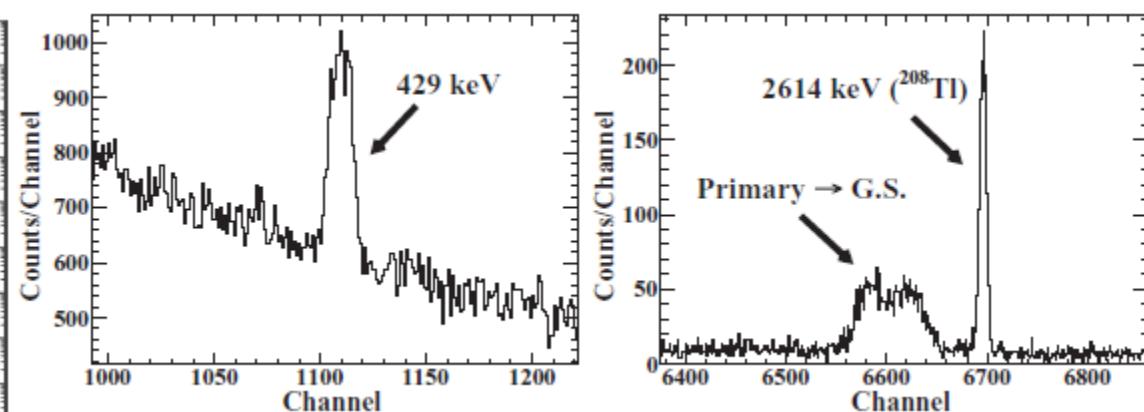

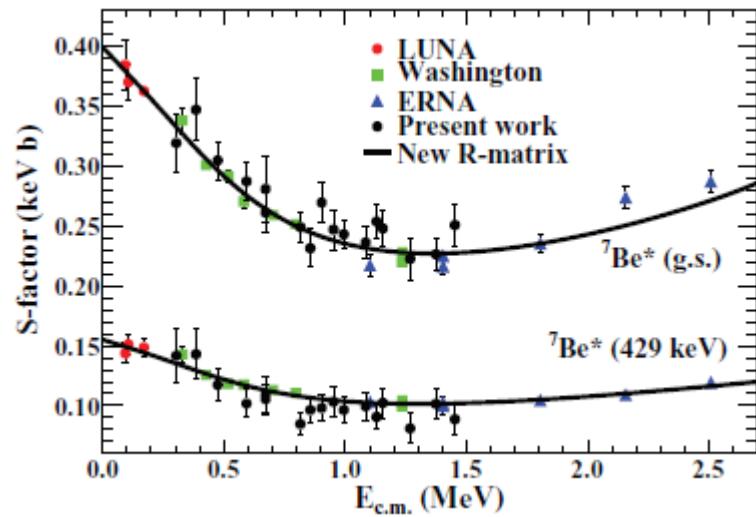

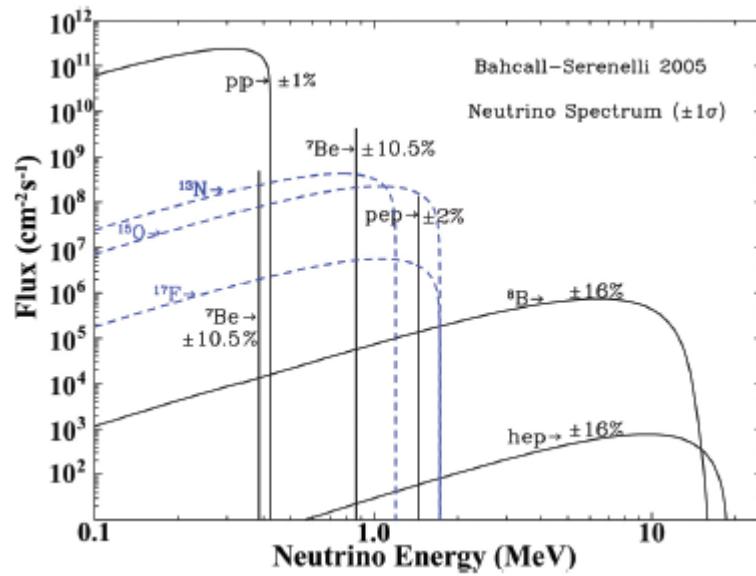

state-of-the-art

# Gas jet for the recoil separator ERNA

European Recoil mass separator for Nuclear Astrophysics

See talk by  
Raffaele Buompane  
about  $^{7}\text{Be}(\text{p},\gamma)^{8}\text{B}$

**Location and Year** Caserta (Italy) 2017

**Target gas** Helium

**Particle density**  $1.97 \times 10^{18}$  atoms/cm<sup>2</sup>

**Geometrical width** Not reported

**Method** Energy loss of  $^{12}\text{C}$  beam

# Attention should be paid to ...

1. Distribution  
of the jet  
density

2. Overlap  
between ion  
beam and jet

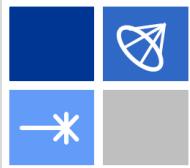

of  $S_{34}$  (35–41) is displayed in Table 2. The value quoted for (35) is the published value. There are indications (C. Rolfs, private communication) that this value includes some measurements with a gas-jet target that used an incorrect value for the target thickness. This apparently increases the extracted value of  $S_{34}$  to 0.40 keV-barns.

# Comparison of different He jets

Location	Year	Input pressure	${}^4\text{He}$ jet density	${}^4\text{He}$ jet FWHM	Distance from nozzle	Reference
		(kPa)	( $10^{18} \text{ at./cm}^2$ )	(mm)	(mm)	
Münster	1982	200	$0.34 \pm 0.06$	$2.5 \pm 0.2$	1 to 5	[23]
Stuttgart	1991	38	$0.078 \pm 0.013$	$2.6 \pm 0.2$	$\sim 1.5$	[24]
Notre Dame	2012	150	$0.259 \pm 0.021$	$2.2 \pm 0.2$	$\sim 4$	[27]
Oak Ridge	2014	2859	$10.2 \pm 0.9$	$5.1 \pm 0.3$	$\sim 1$	[17]
Caserta	2017	700	$1.97 \pm 0.21$	not reported	$\sim 5.5$	[32]
East Lansing	2018	2515	$9.0 \pm 0.3$	$2.03 \pm 0.09$	$\lesssim 4$	this work

Normalized to 2.859 MPa input pressure

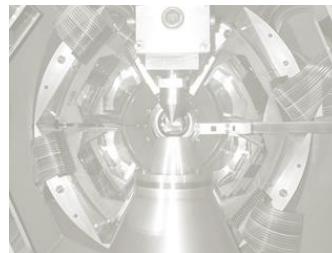

# Outline

Motivation for gas-jet targets

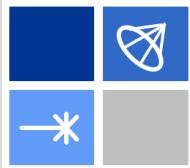

Review of supersonic gas-jet targets in nuclear physics

The JENSA gas-jet target

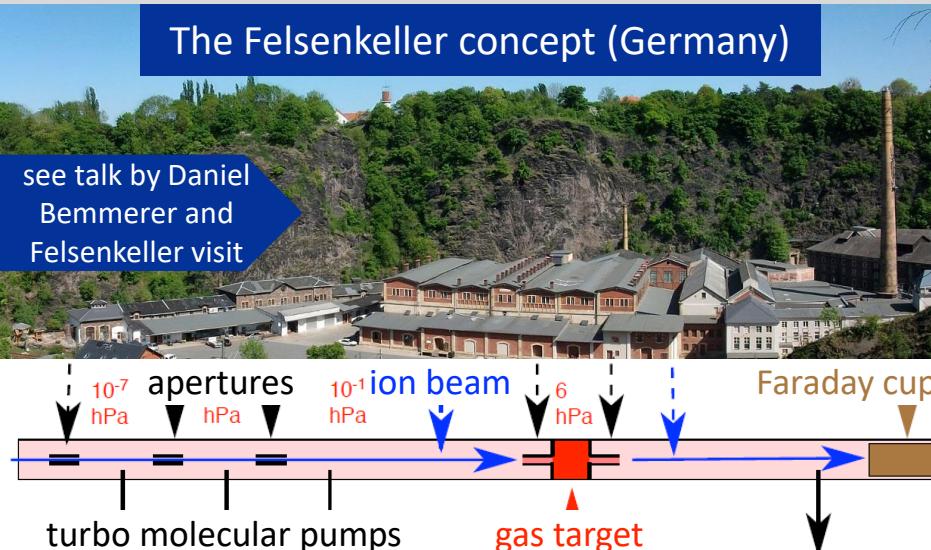

Perspective of future gas targets

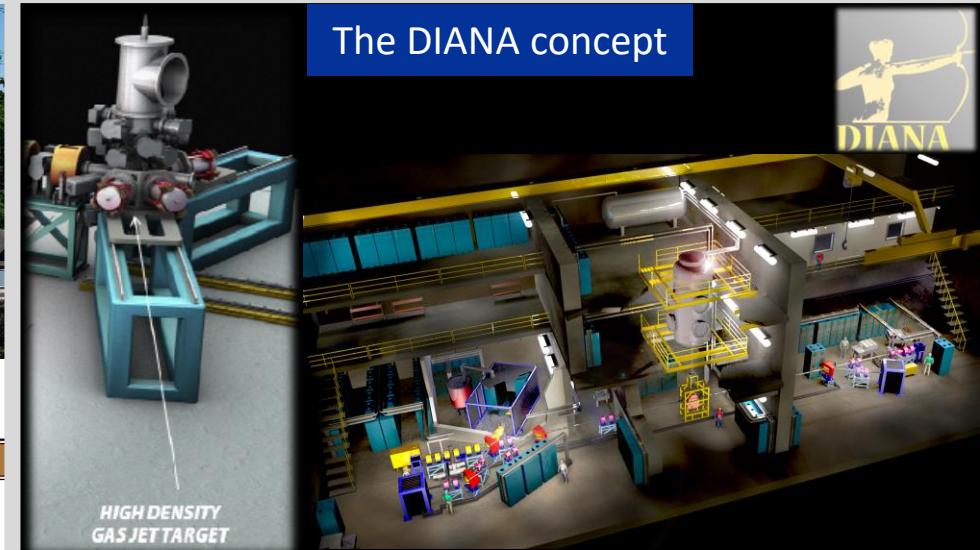

# Perspectives of gas targets underground

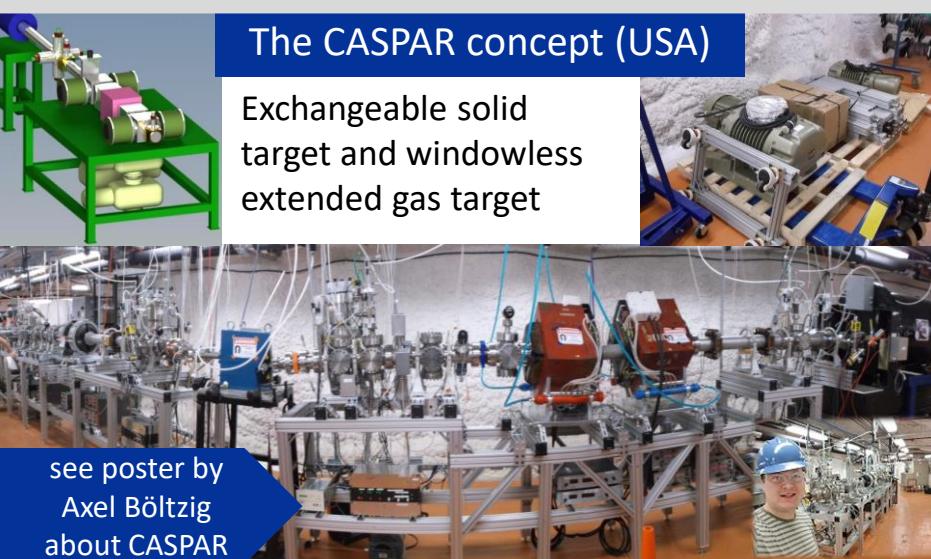

The Felsenkeller concept (Germany)

The DIANA concept

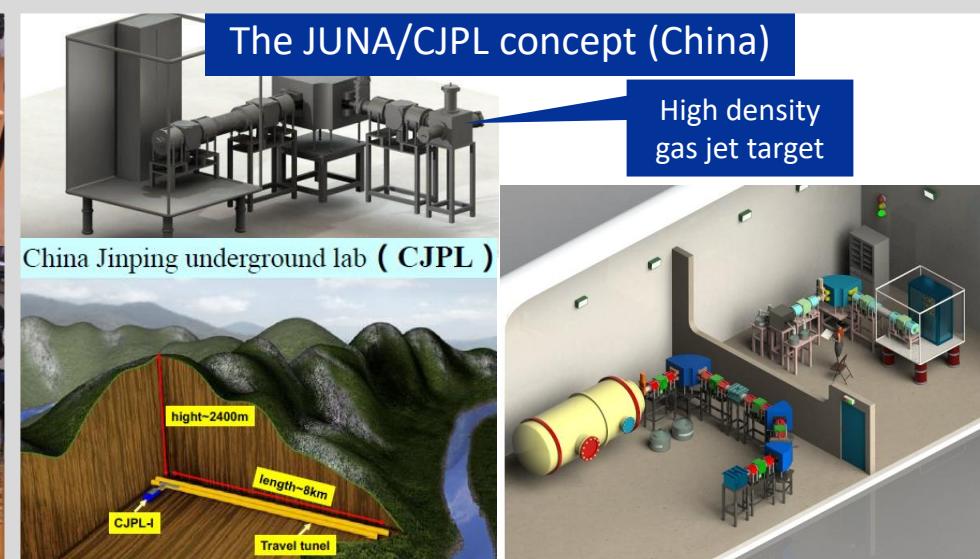

The CASPAR concept (USA)

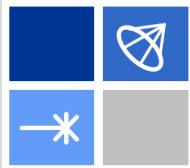

see poster by Axel Böltzig about CASPAR

The JUNA/CJPL concept (China)

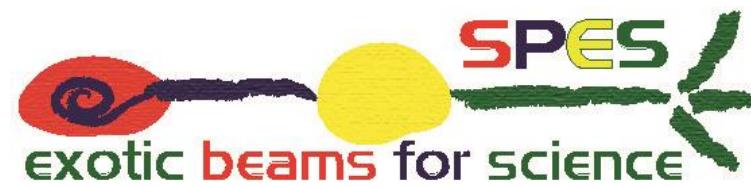

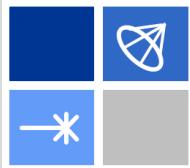

High density gas jet target

# Further perspectives of gas targets

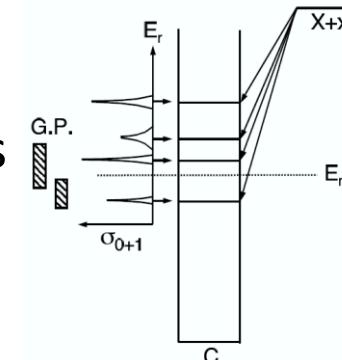

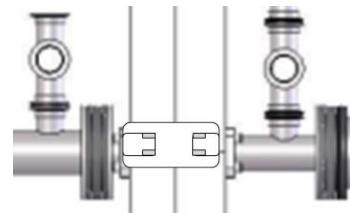

- Planned gas-jet target for DRAGON at TRIUMF (Vancouver, Canada)
- Planned gas-jet target for SPES-INFN (Legnaro, Italy)
- Planned extended gas chamber at JENSA for SECAR (East Lansing, USA)
- ...

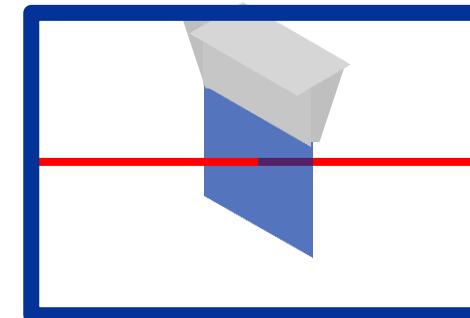

# Ideas for the future

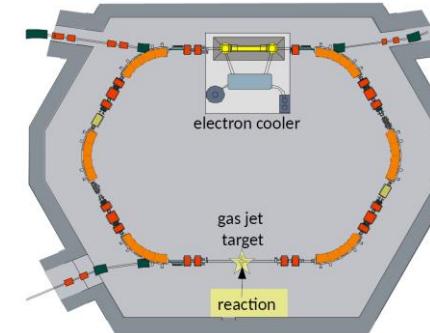

- Narrow resonance studies at astrophysical energies need thin gas targets
- Concept for a more homogeneous gas jet target (curtain gas jet)
- Next-generation gas cells
- ...

From: C. Iliadis, Nuclear Physics of Stars (Wiley-VCH, Weinheim, 2007).

See e.g. Putignano *et al.*, Proceedings of the 14<sup>th</sup> Beam Instrumentation Workshop, TUPSM045 (2010)

From: Z. Slavkovská, NARRS Workshop 2018

## Further application possibilities:

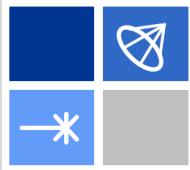

- Gas targets at storage rings – energy loss has to be compensated
- ...

JINA-CEE

NSF Physics Frontiers Center

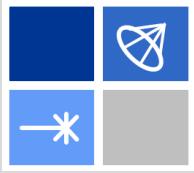

Konrad Schmidt: Gas-jet targets for nuclear astrophysics  
5th International Solar Neutrino Conference

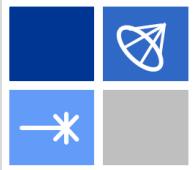

# Summary

- Nuclear astrophysics experiments will benefit from next generation gas-target setups
- Low cross-section measurements need pure targets with high densities
- The development of supersonic gas-jet targets culminated in JENSA ( $10^{19}$  atoms/cm<sup>2</sup>) and is further ongoing
- Future gas targets are planned and in development

# Backup slides

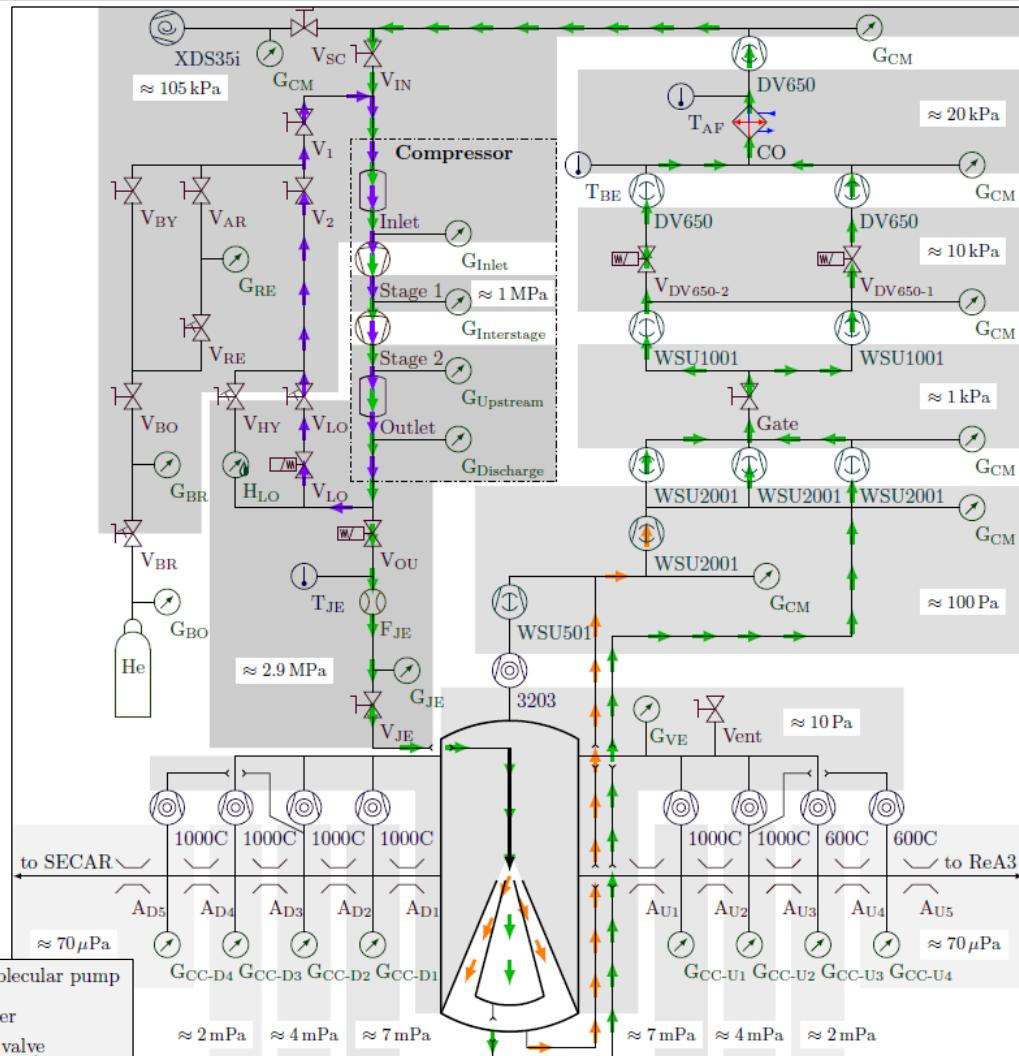

# Schematic of the JENSA system

**Major gas flow**

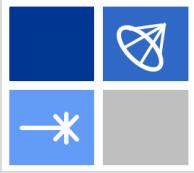

Needle valve controls the amount of gas directly lead back to the compressor

<10% of the gas is caught by the outer receiver

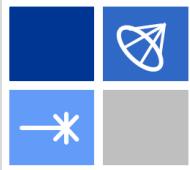

scroll pump	roots blower	diaphragm compressor	turbo molecular pump
pressure gauge	hygrometer	thermometer	flow meter
manual valve	metering valve	solenoid valve (normally closed)	solenoid valve (normally open)
vessel	water cooler	high-pressure He cylinder	nozzle and receiver

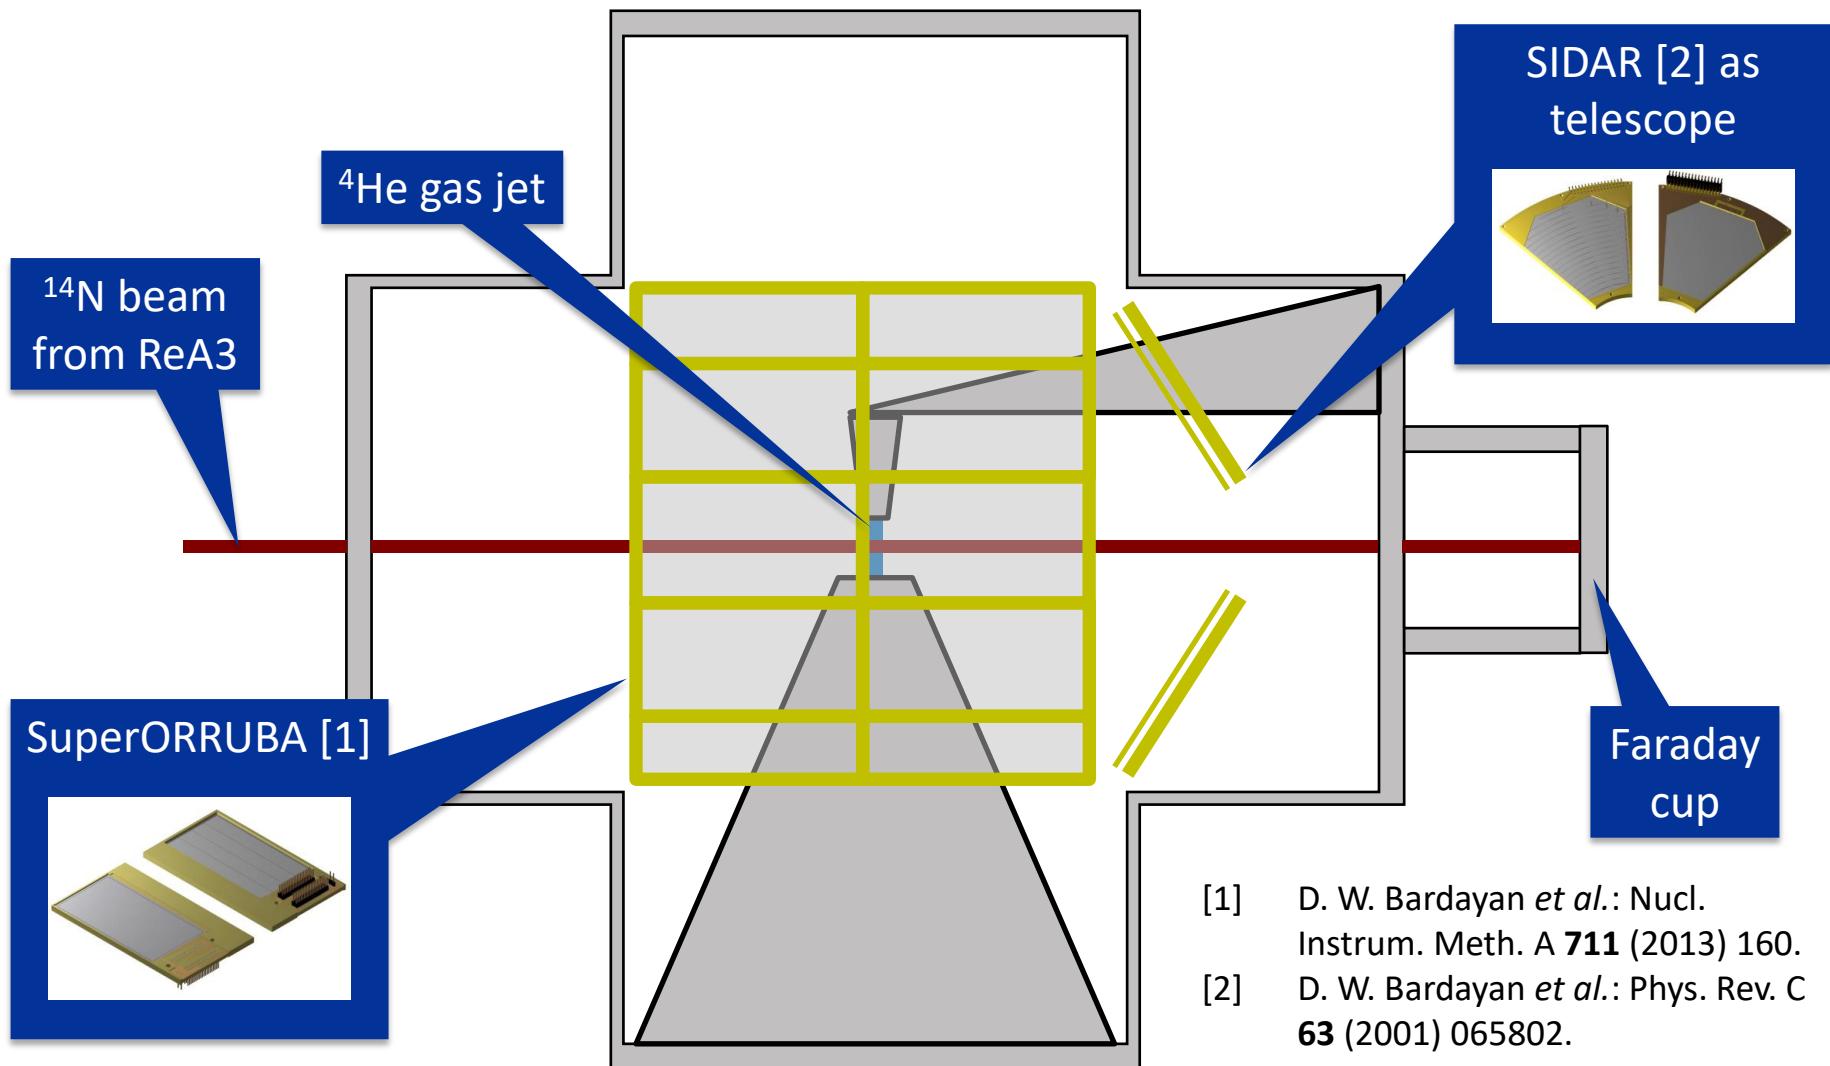

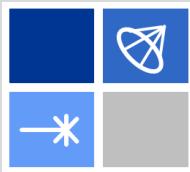

# Commissioning experiment at NSCL

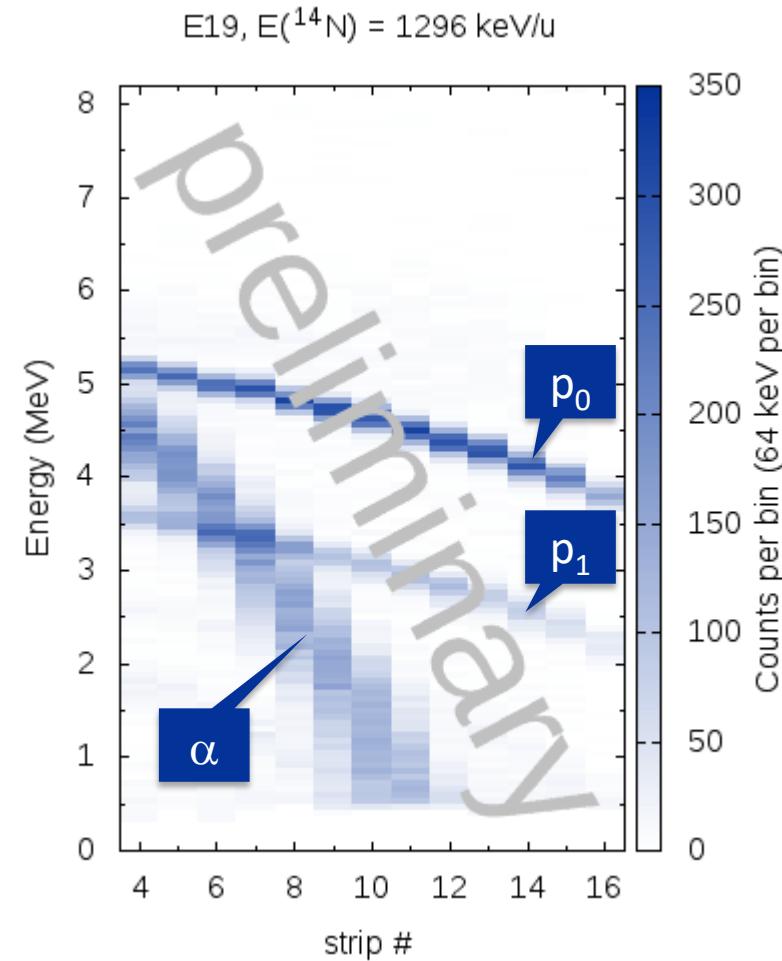

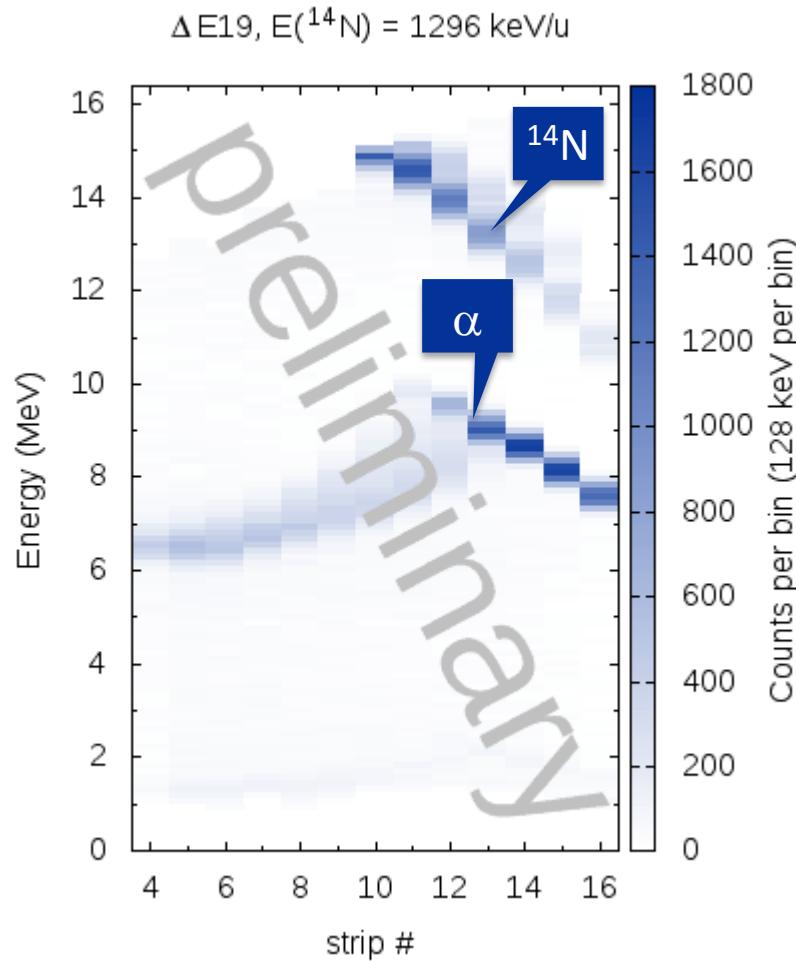

# Setup for ${}^4\text{He}({}^{14}\text{N},\text{p}){}^{17}\text{O}$ study

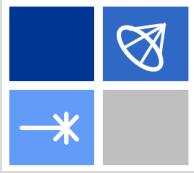

# $^4\text{He}(^{14}\text{N}, \text{p})^{17}\text{O}$ – preliminary results

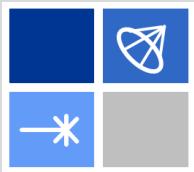

Segmented Si detector telescope

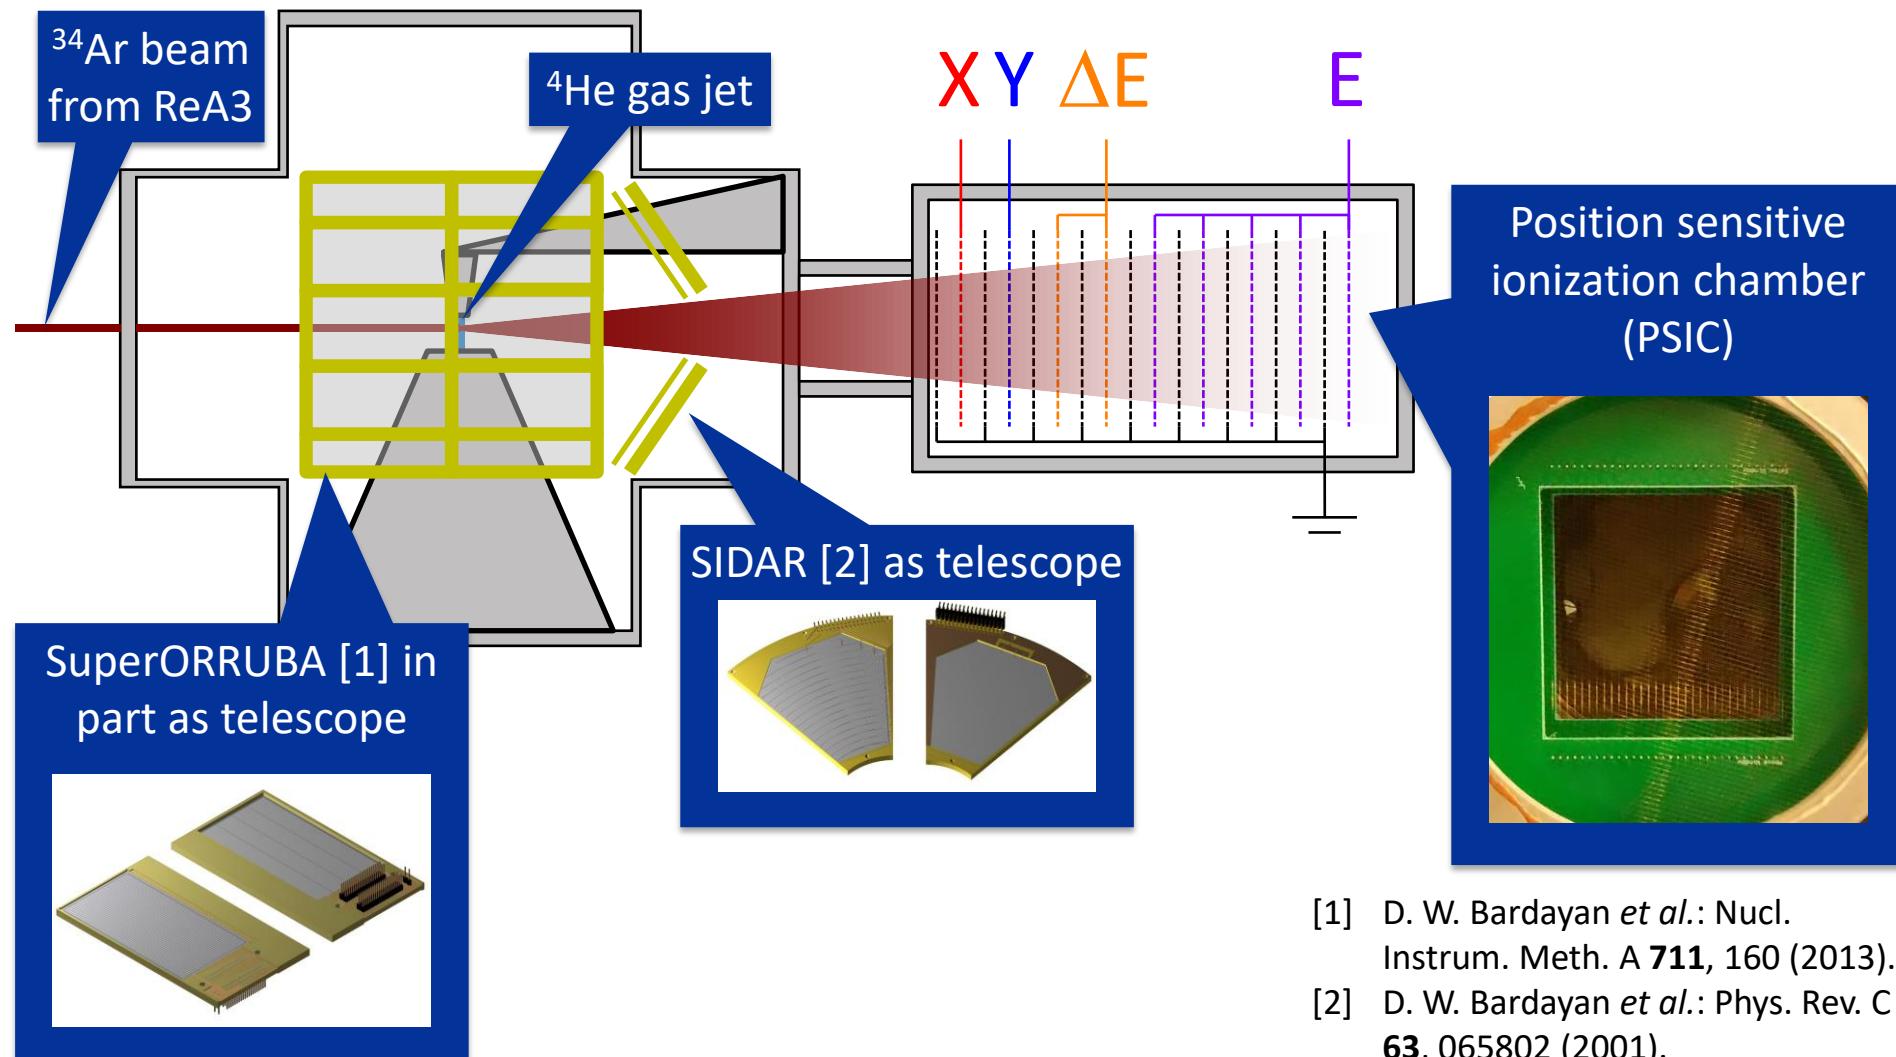

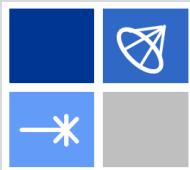

# First radioactive beam experiment

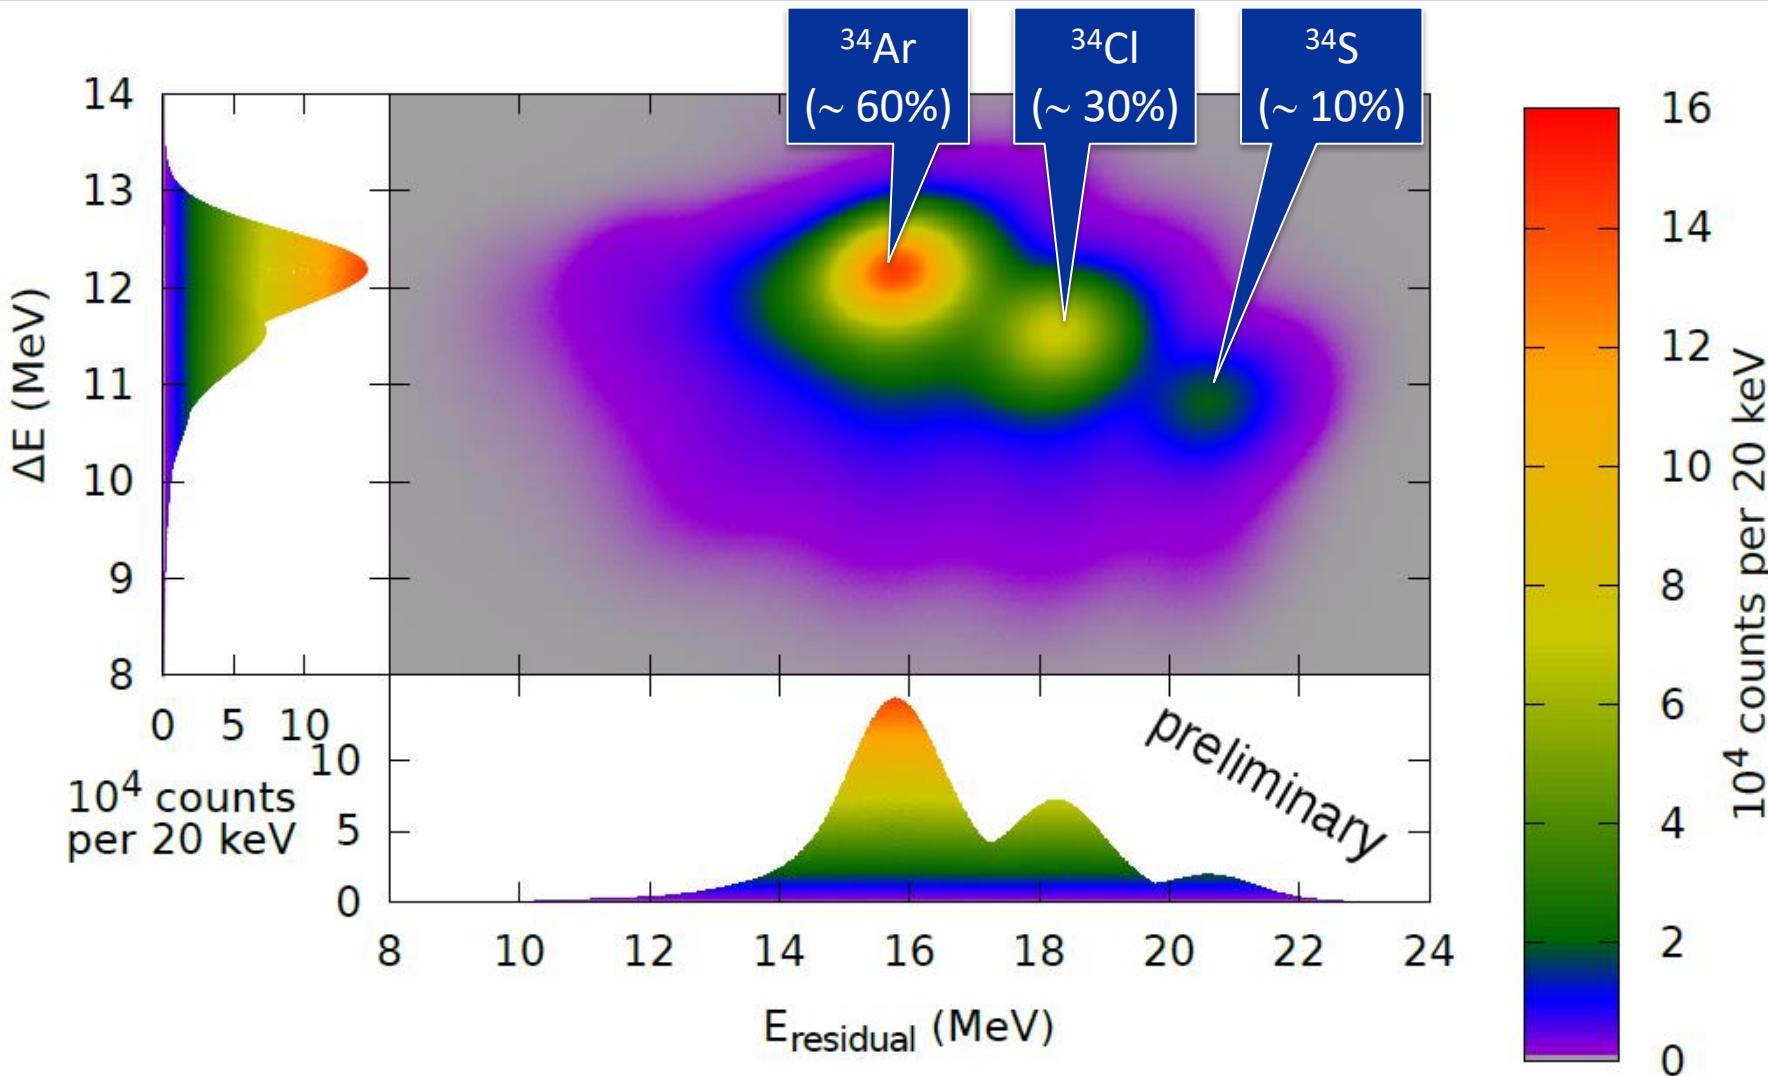

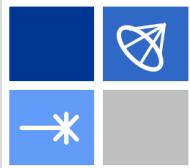

# Setup for ${}^4\text{He}({}^{34}\text{Ar},\text{p}){}^{37}\text{K}$ study

~3000 pps at 1.625 MeV/u for 108 hours

# Proton signals in Si detectors
