

# **Laser Alignment System for Track-based Alignment**

*Beam-fit Results with CRAFT Data*

Kolja Kaschube

CMS Hamburg Alignment Meeting  
May 26, 2009

# Status

## **stand-alone producer:**

- reads root-file
- makes fit of LAS beams (TECs and Alignment Tubes)
- returns fit parameters, fitted hit positions, ...

## **shown today:**

- hit distributions and residuals of LAS CRAFT data
- aligned geometry used (Aachen: MP\_step1\_of\_Adun2)
- uncorrected beam model used (no BS kinks, AT movements)

## **next steps:**

- make an alignment with MillePede
- make it a CMSSW plugin

local x of LAS hits in TECplus
