CS++ - Status and Outlook

Tuesday 17 April 2018 13:00 (23 minutes)

Summary

CS++ extends the NI Actor Framework. It's focused on fast development and commissioning of experiment control systems and automation. It is prepared to implement specific custom GUI's as well. Shared Variables are used for distributed system, alarming and historical trending, but can be easily extended to other network protocols. CS++ libraries are published under the terms of EUPL at [enter link description here](#)

A few application under development are presented and an outlook to planned features is given.
