

PandaX status and prospect

Thursday 21 June 2018 09:35 (20 minutes)

The PandaX dark matter experiment searches for Weakly interacting massive particles (WIMPs) in the China Jinping Underground Laboratory (CJPL). PandaX-II, with a 580-kg liquid xenon TPC currently under operation, is one of the leading WIMP direct detection experiments. In this talk, I will present an overview of the project, discuss recent results from PandaX-II, and give an outlook into the future.
