

# Planning technical commissioning (t-c) of SA2

- **Aim**
  - Continue CAS task of technical commissioning (VB,WE,CY) for SA2 – XTD6
- **Steps on the way to t-c of XTD6 are probably**
  - Working infrastructure needed = Racks (power and water), Networks (ITDM),
  - Working PLC loops in order: VAC, MOV1, MOV2, EPS...
  - t-c ready components: h/w devices, terminal crates, documentation, cables (AV)...
  - VAC: expect h/w to be installed 1<sup>st</sup> to MID then HED
  - MOV: expect beam transport mirrors, slits... and diagnostic components Imagers...
  - Leave complex 'never seen before' components, e.g. SDU, to later (2019?)
- **Differences w.r.t. previous t-c campaigns**
  - XTD6 is open for a long period which makes keeping focus difficult
  - Previous t-c had clear targets, e.g. 1<sup>st</sup> lasing or SA3 beam characterization readiness
  - Targets = Priorities = Focus
- **Conclusion (to-dos)**
  - During KW19 gather facts (what, when, who) from HS, JG, MD, PG, GW...
  - We need to define reasonable targets, e.g. 1<sup>st</sup> beam in XTD6..., and when these happen
  - The component – task / status table is shown in the next slide. Needs ~finalizing in KW19
  - Suspect need XTD6 open for > July to get to a sensible 1st target (August is holiday time too!)
- **Not to forget**
  - t-c of SA2 – XTD1 MID CRL
  - t-c of SA3 – XTD10 PBLMs, sMONO and SQS IMGES

4.5.2018 SA2-XTD6 task overview for t-c. (incomplete - to finalize KW19)
