

Martin Killenberg - Improvements in ChimeraTK

Thursday 6 December 2018 17:30 (15 minutes)

We report on the latest developments in ChimeraTK (Control system and Hardware Interface with Mapped and Extensible Register-based device Abstraction Tool Kit).

The DeviceAccess library, the ApplicationCore library and the ControlSystemAdapter have seen their first major release version 01.00, making them even more powerful and convenient to use. More and more device servers are being developed in ChimeraTK or ported to the framework, and are being used with EPICS, OPC-UA and DOOCS at several facilities.
