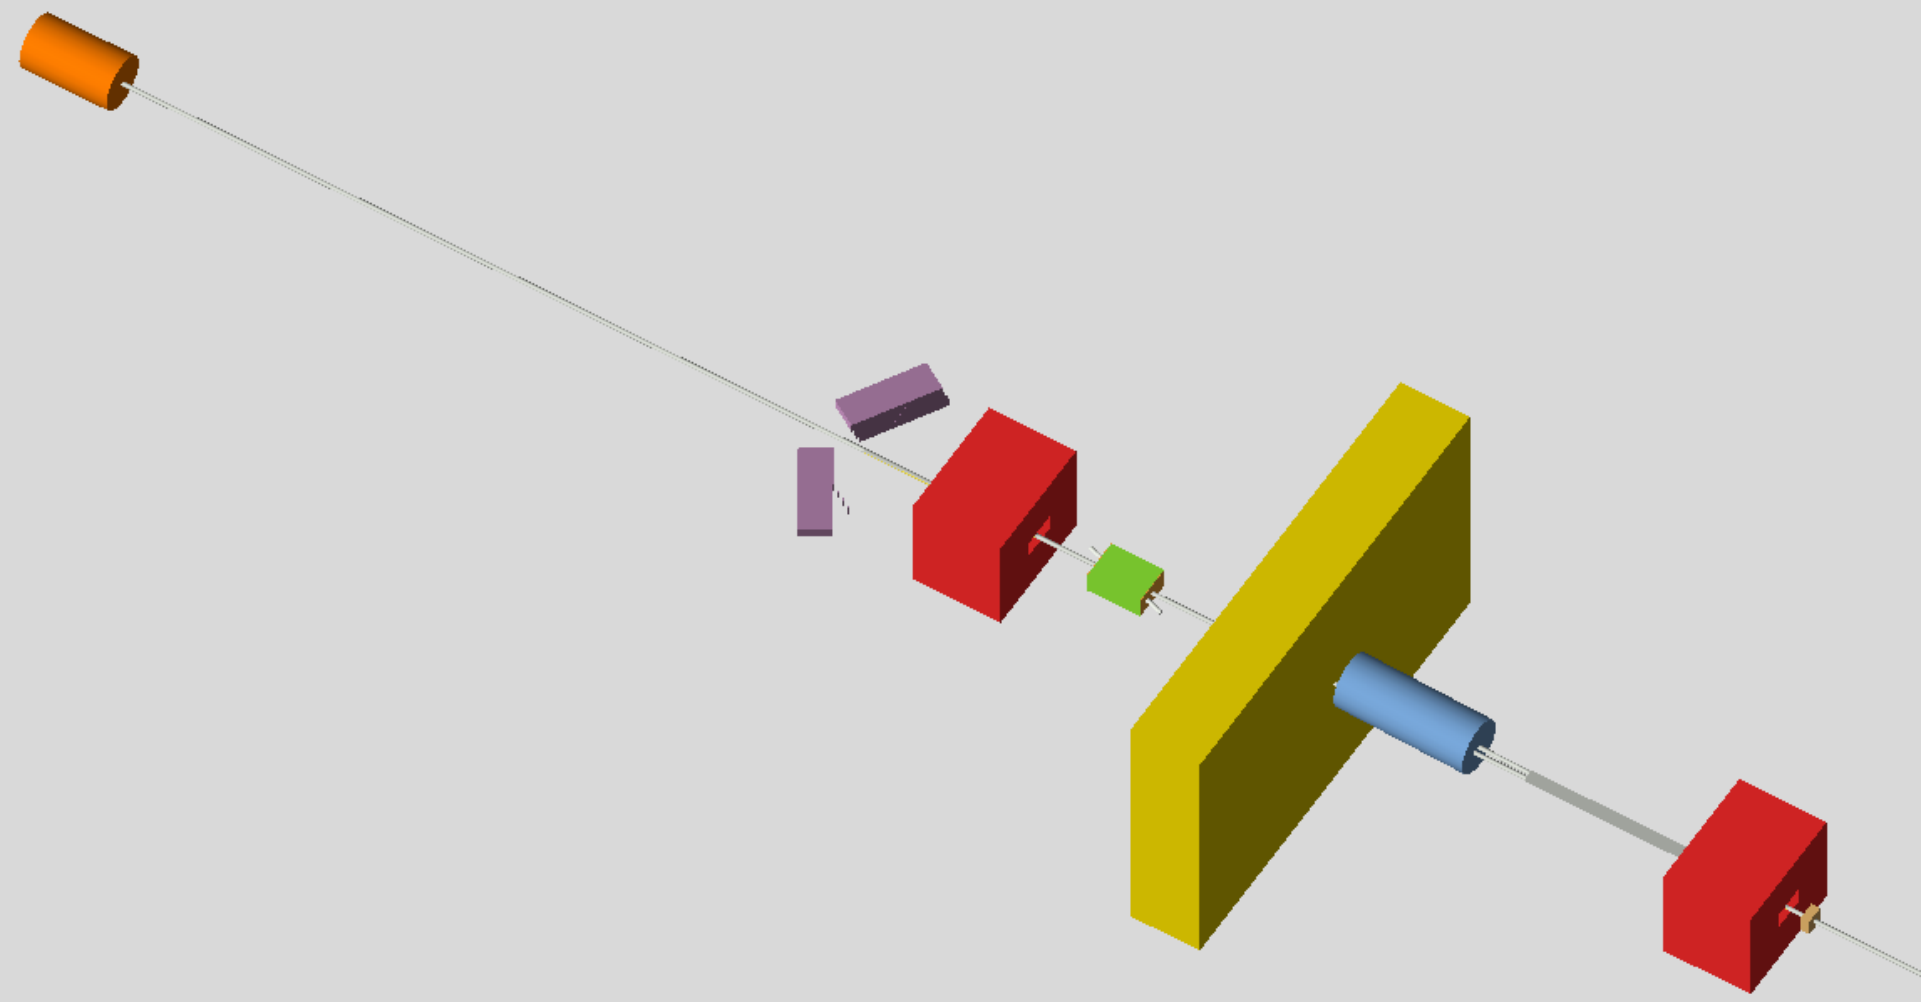
LUXE Background Study in Simulation

Oleksandr Borysov

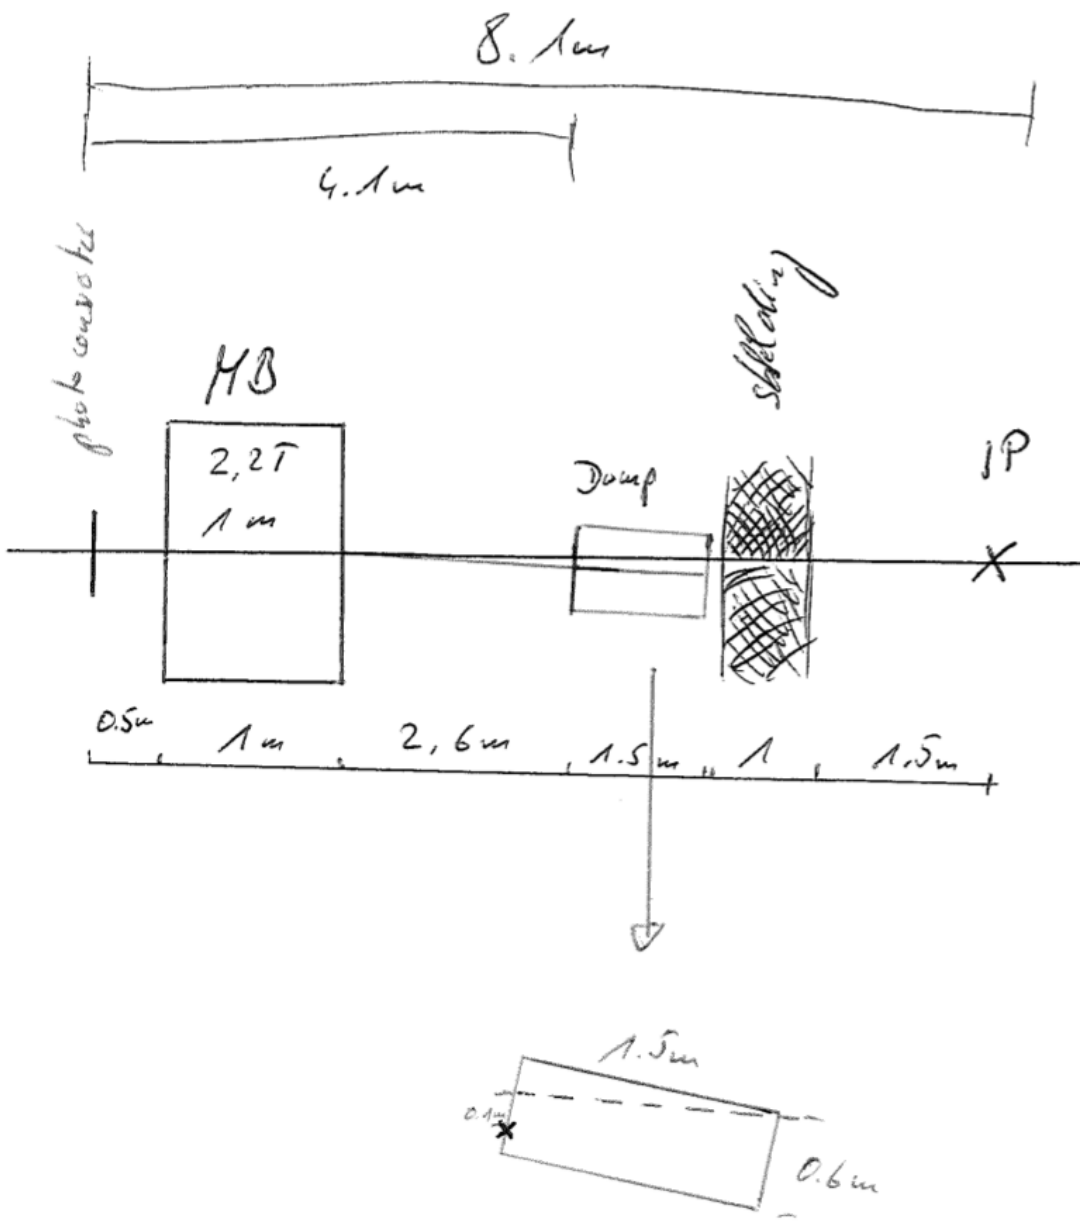
LUXE Meeting
July 15, 2019

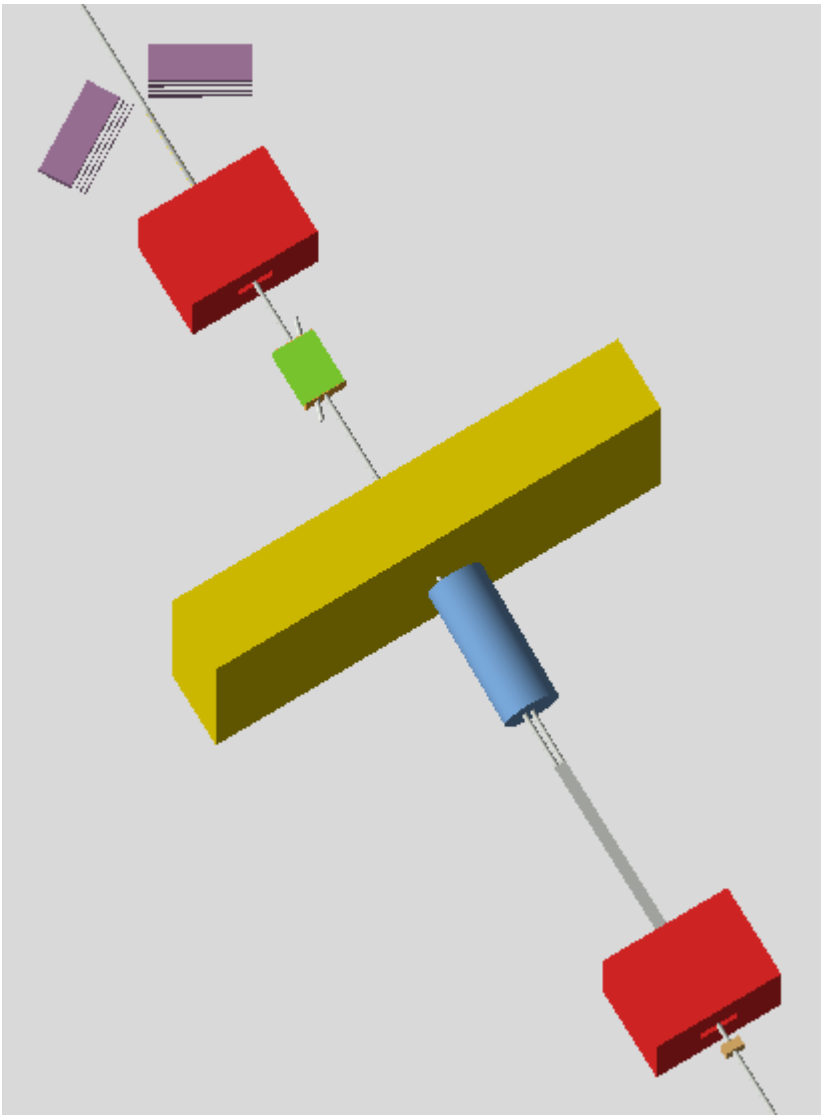
LUXE geometry in Geant4

- Check background in OPPP detectors: trackers and calorimeters;
- Optimize detectors position, shielding, beam pipes and windows;
- Establish a benchmark in a simple geometry for comparison with more detailed implementation.

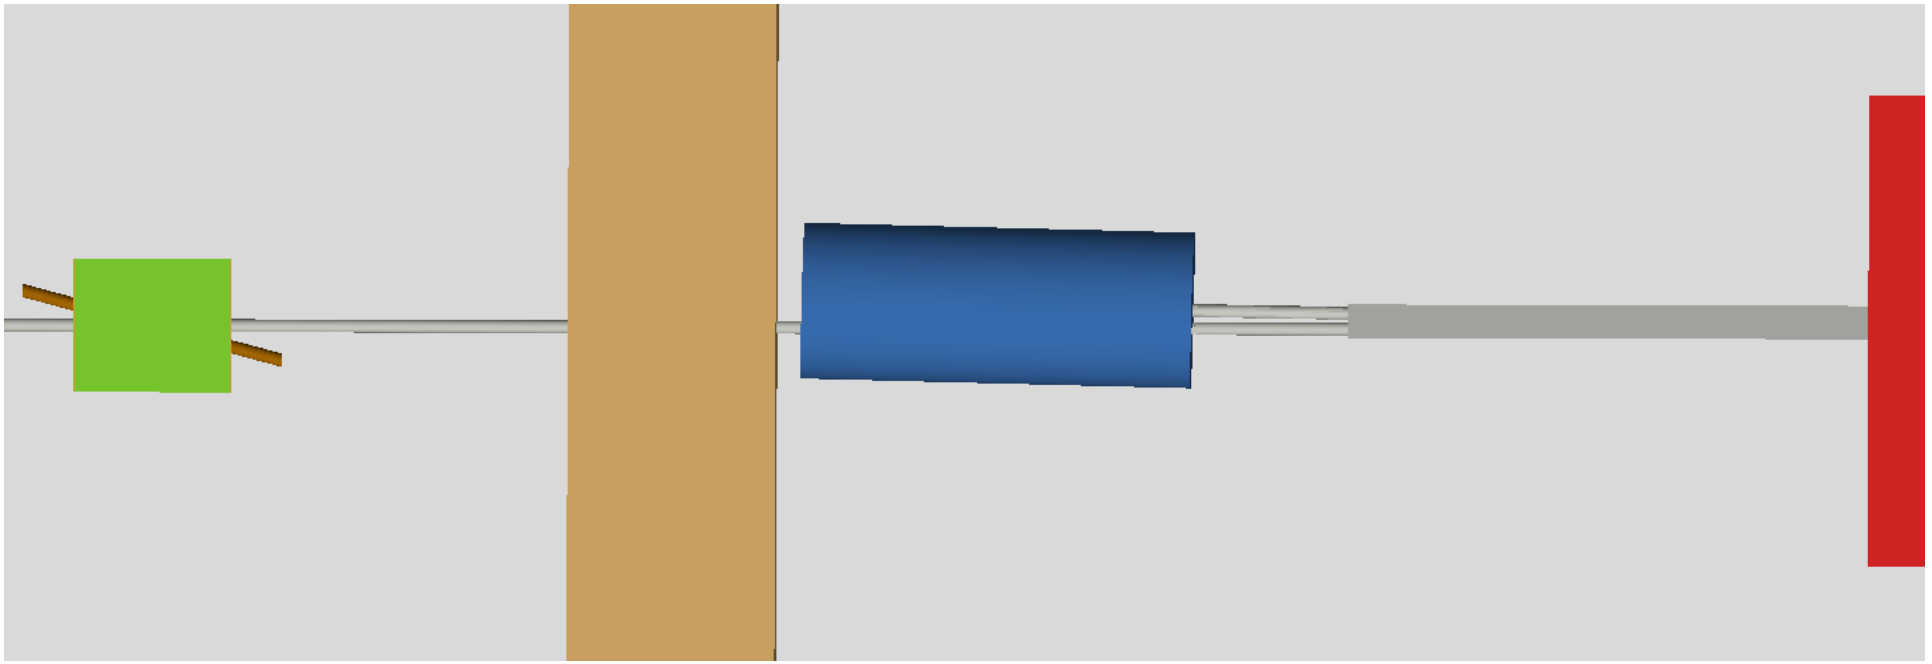


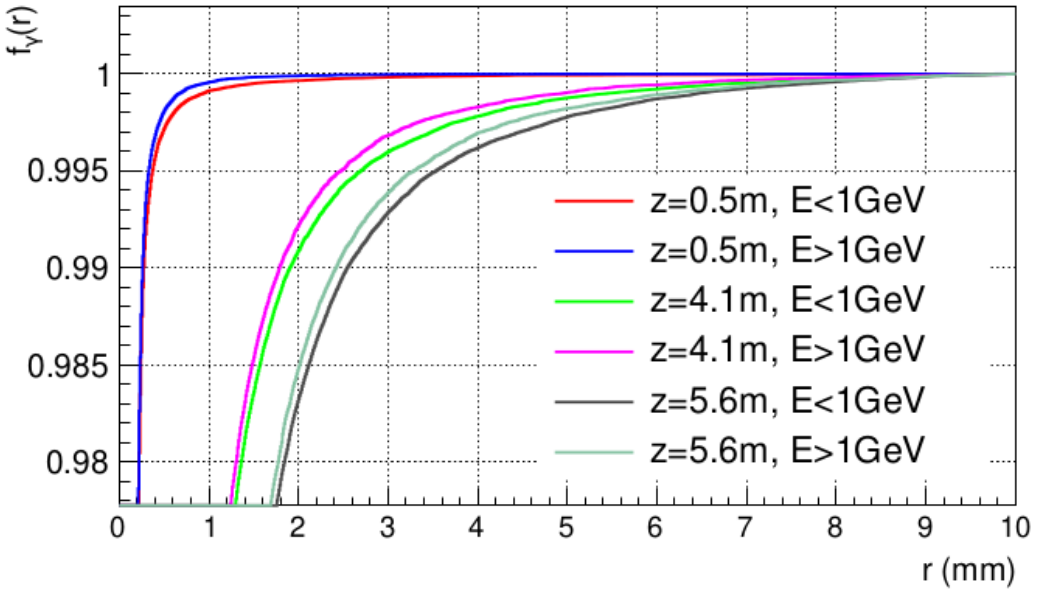
Sketch and Geant4



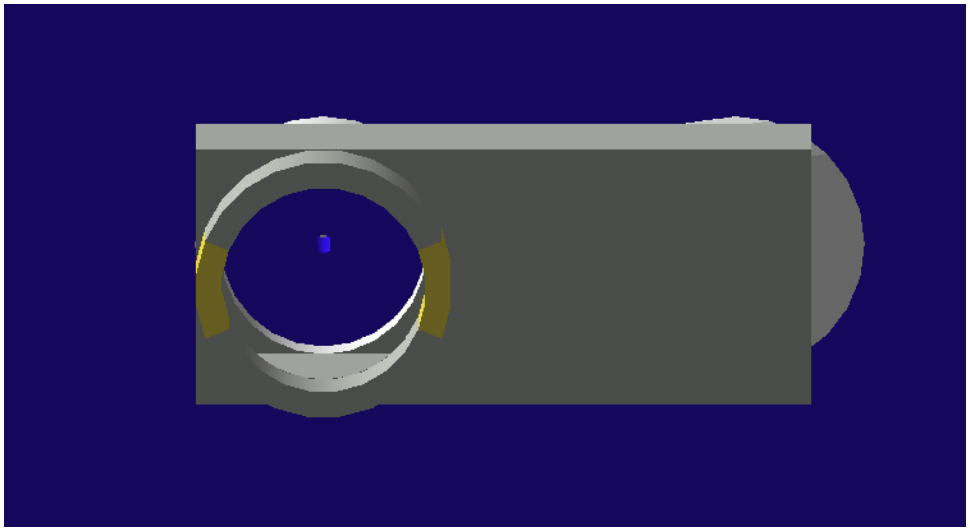


Beam Dump with Hole for Photons



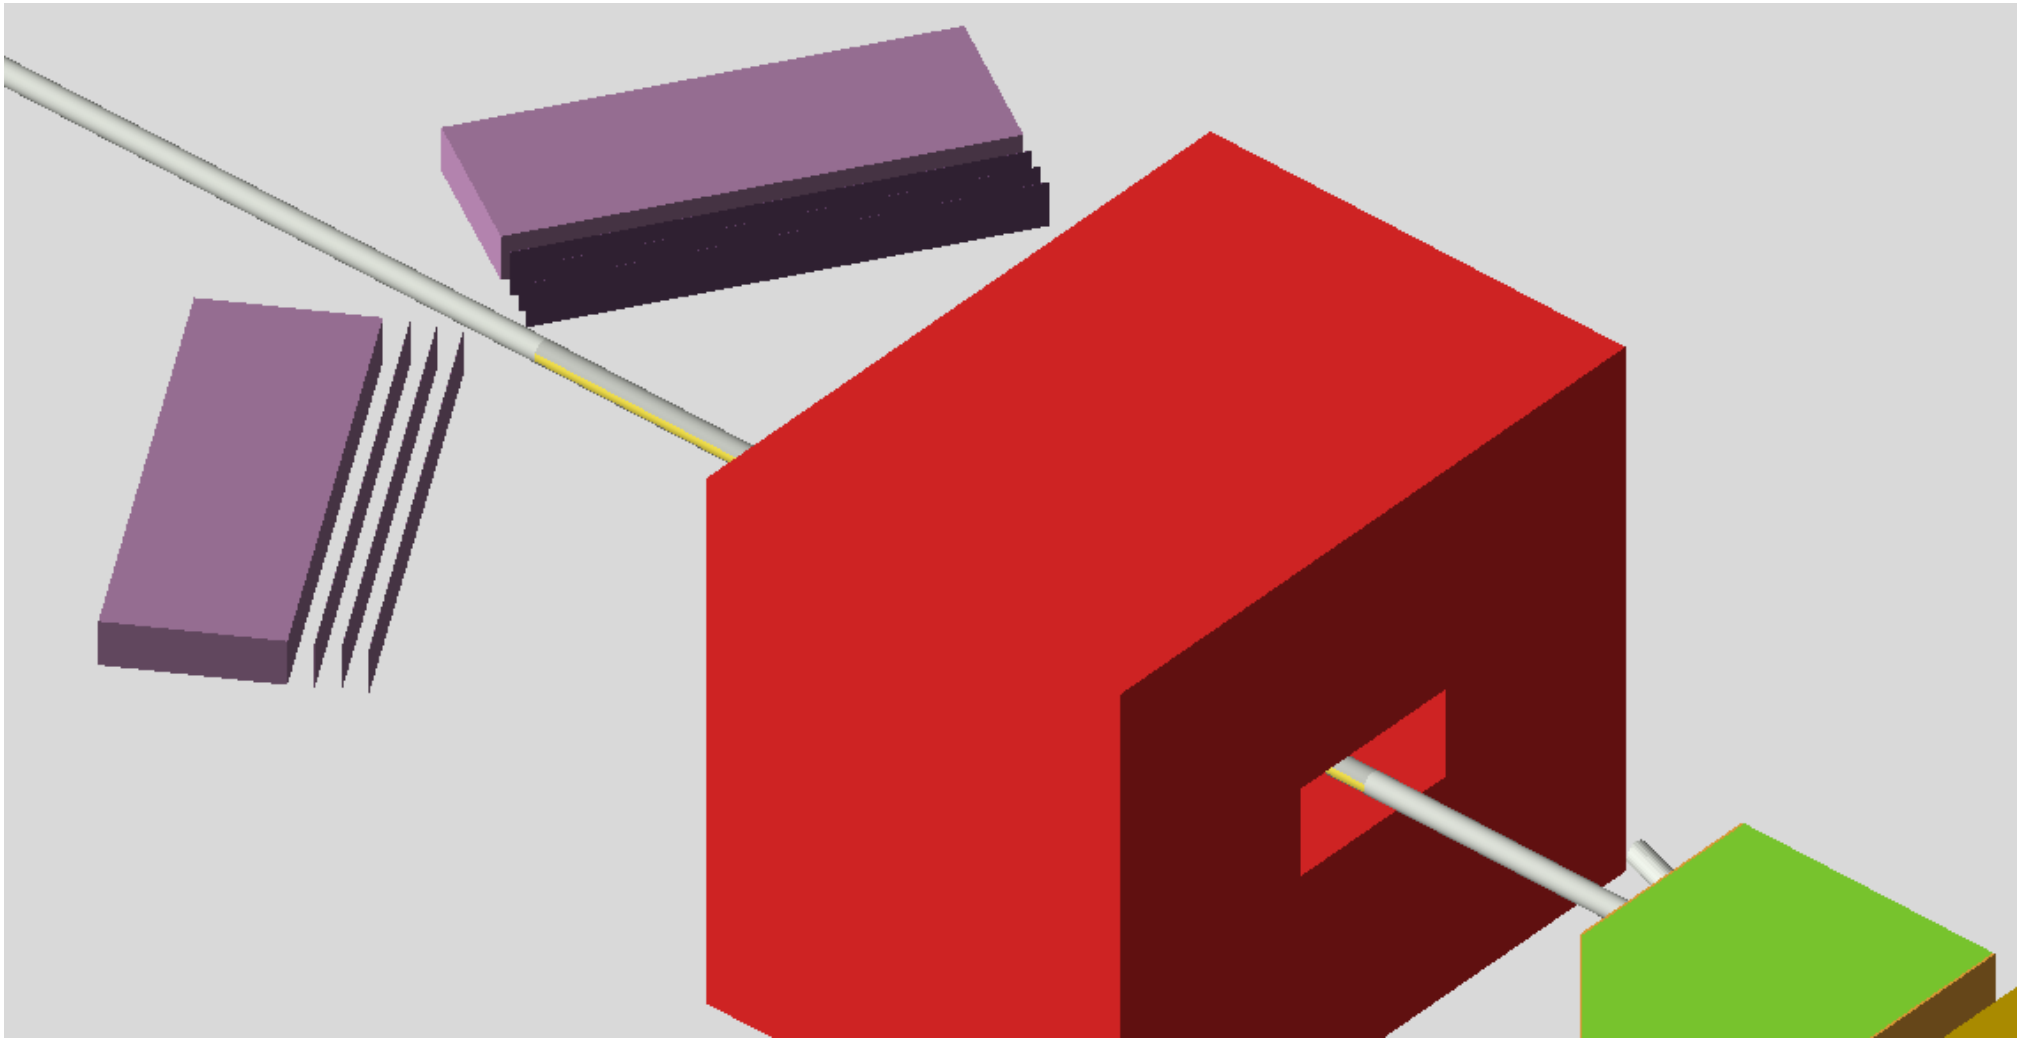


Fraction of photons inside the circle as a function of its radius for different distances from the target

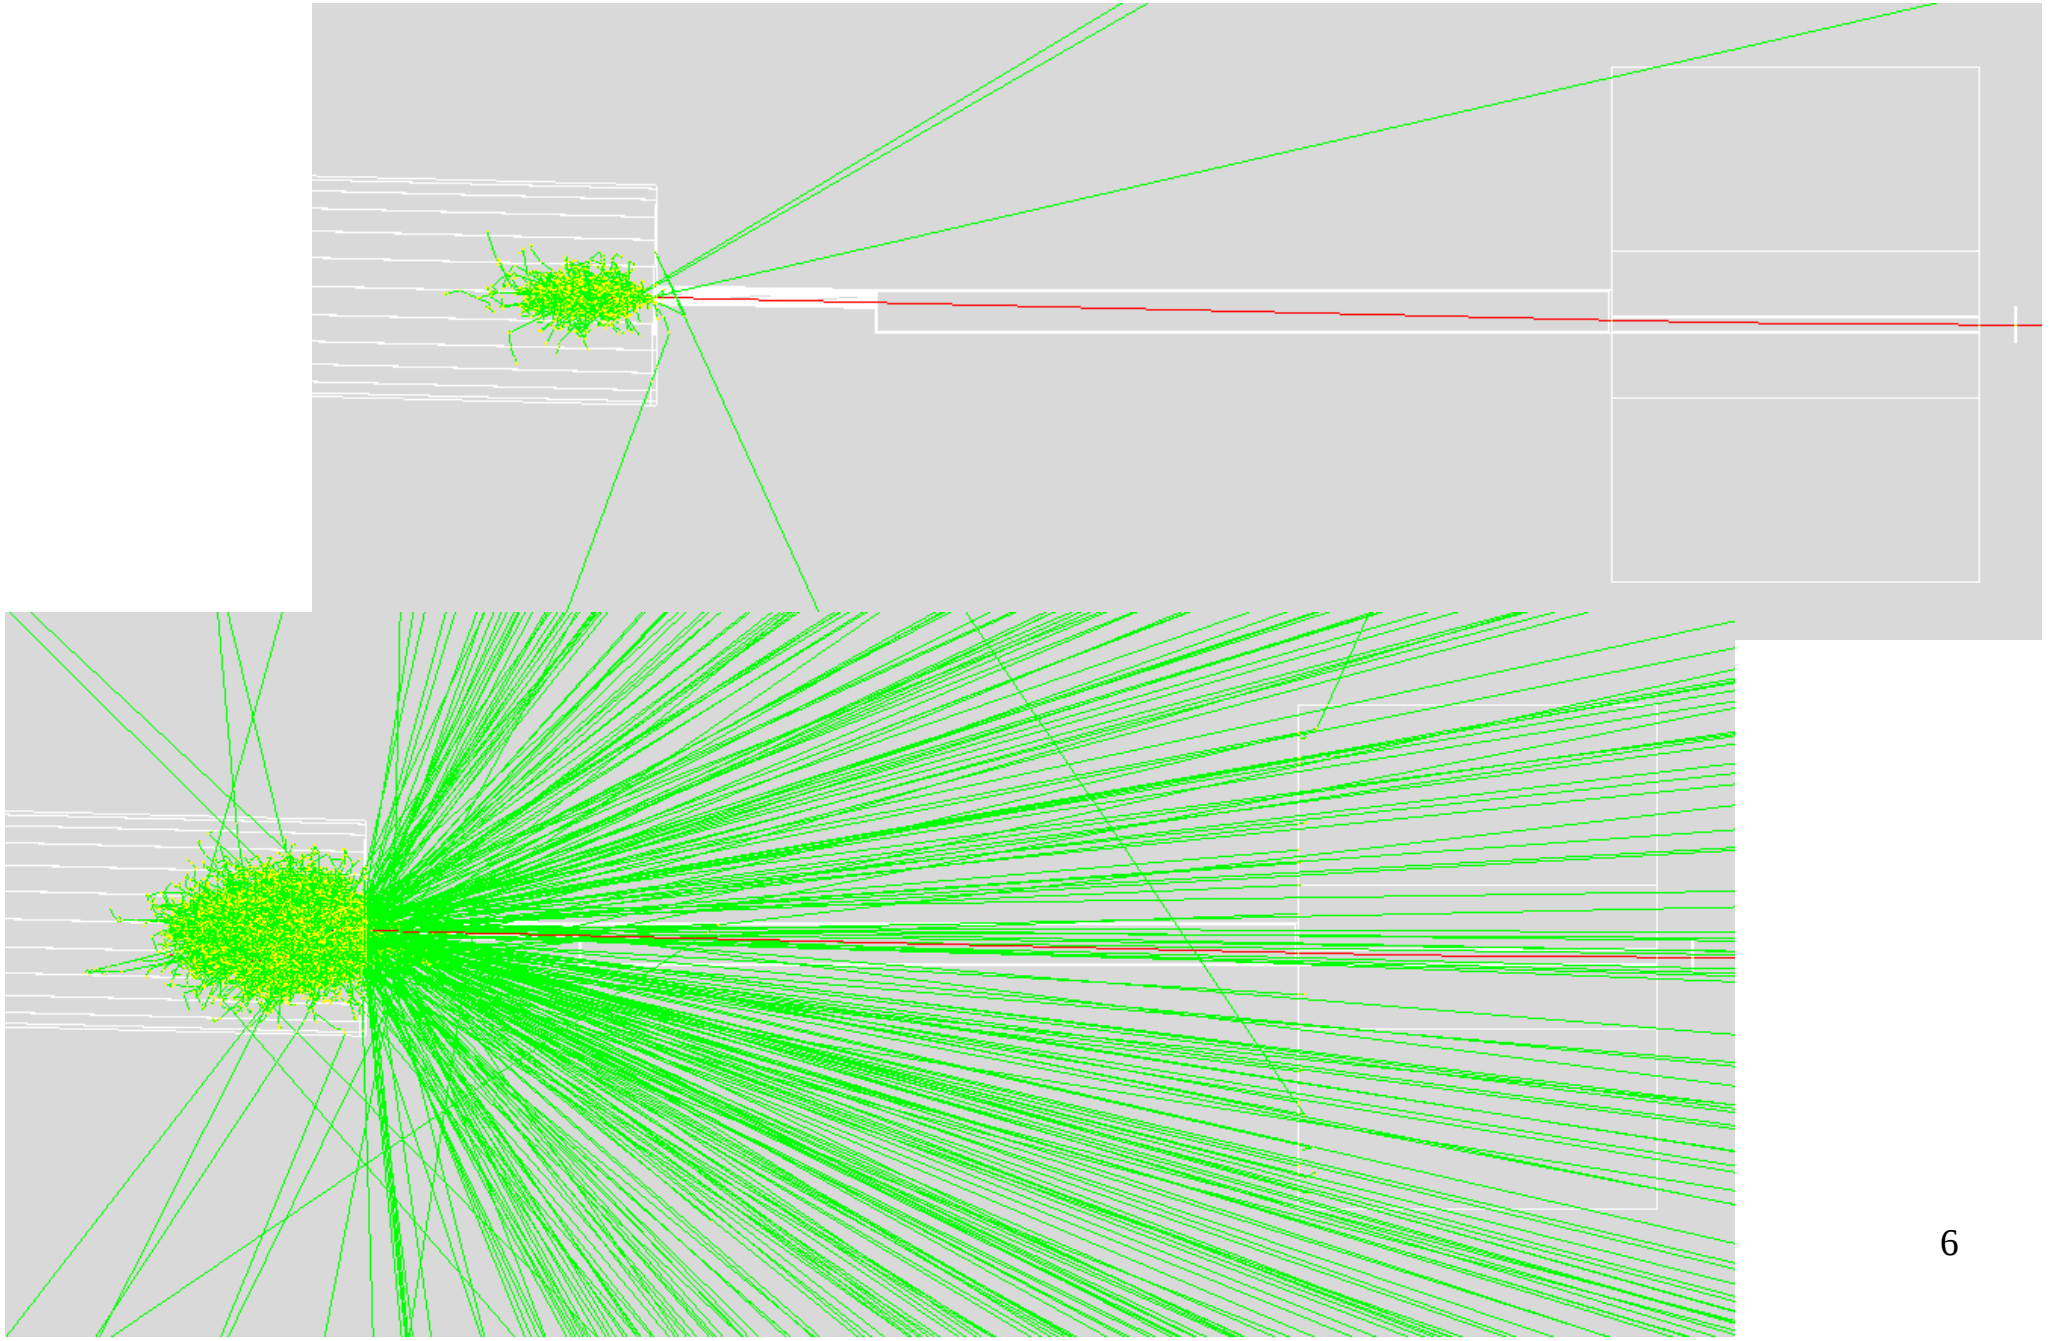


Front view of the beam dump through the beam pipe

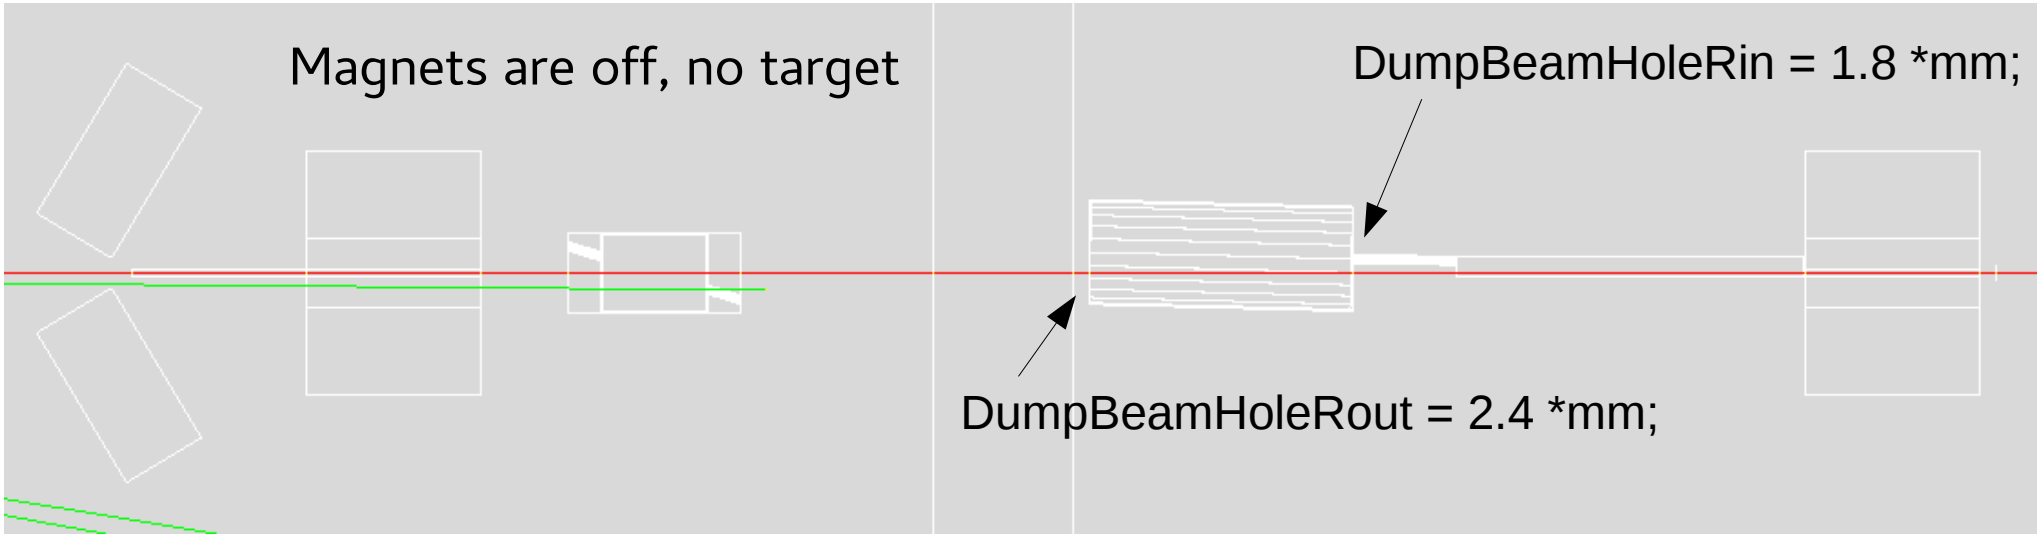
Tracking Planes

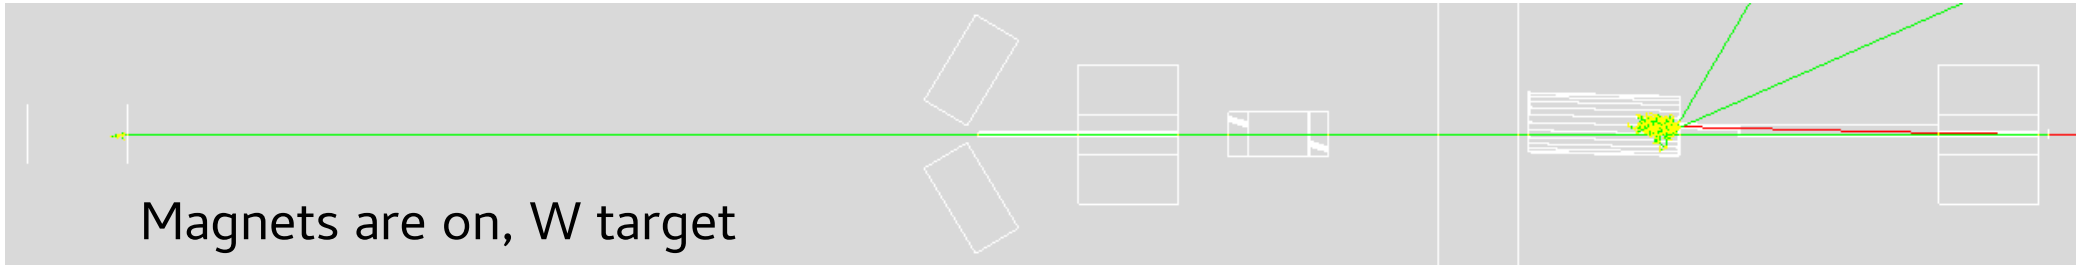


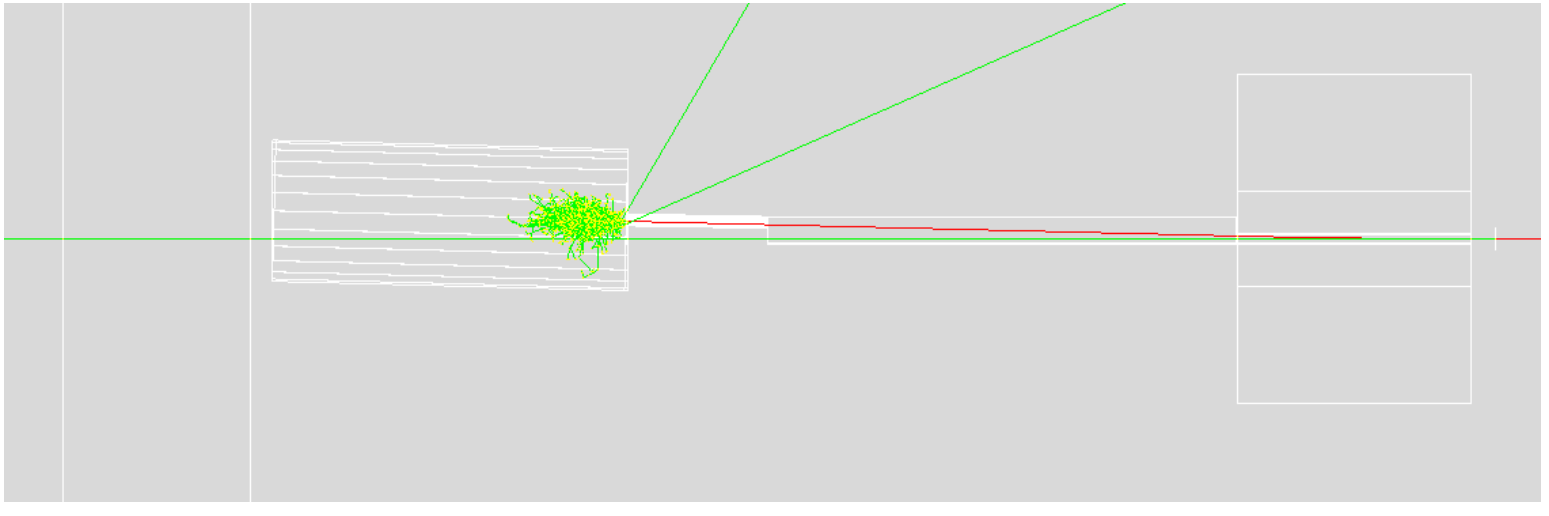
No Target, 1.4 T



Performance with test settings





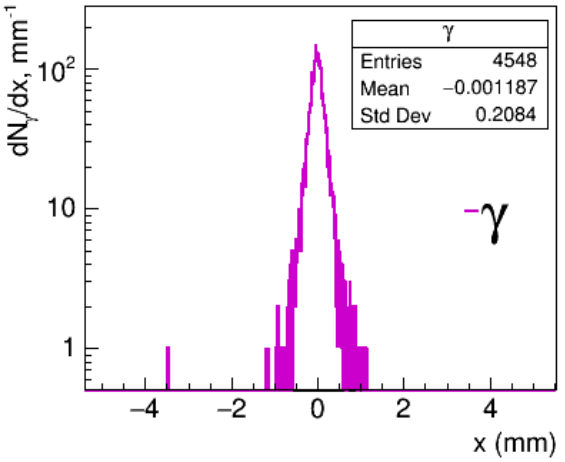


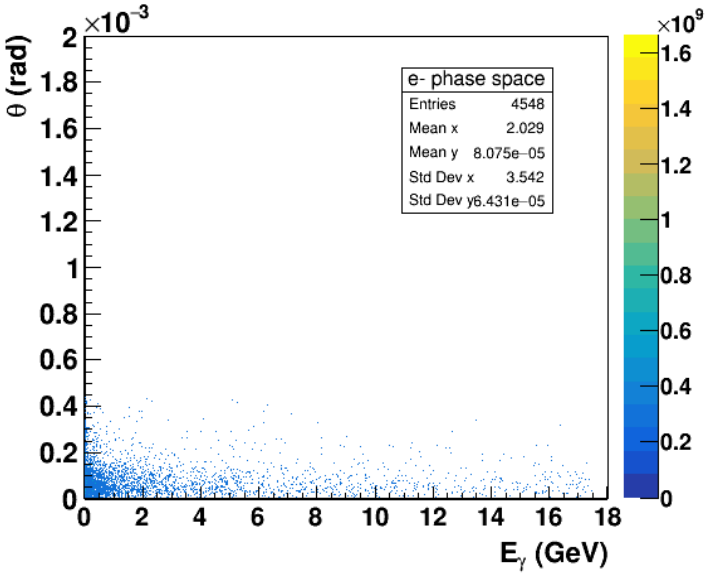
50k e-

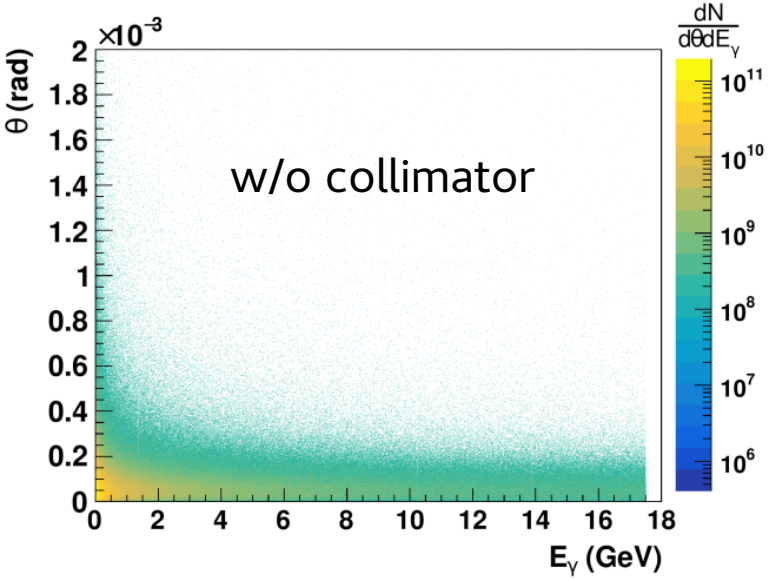
Simulated 50k events recording any track that enters detectors volume 1 was registered;

Row	pdg	E	vtxx	vtxy	vtxz	px	py	pz
0	-11	1.1105072	0.6417944	-1.773730	-3752.636	0.4198077	0.0007512	1.0286506

Bremsstrahlung photons 22.5 m from the collimator (beam dump)







Test with 17.5 GeV e- and 6 T

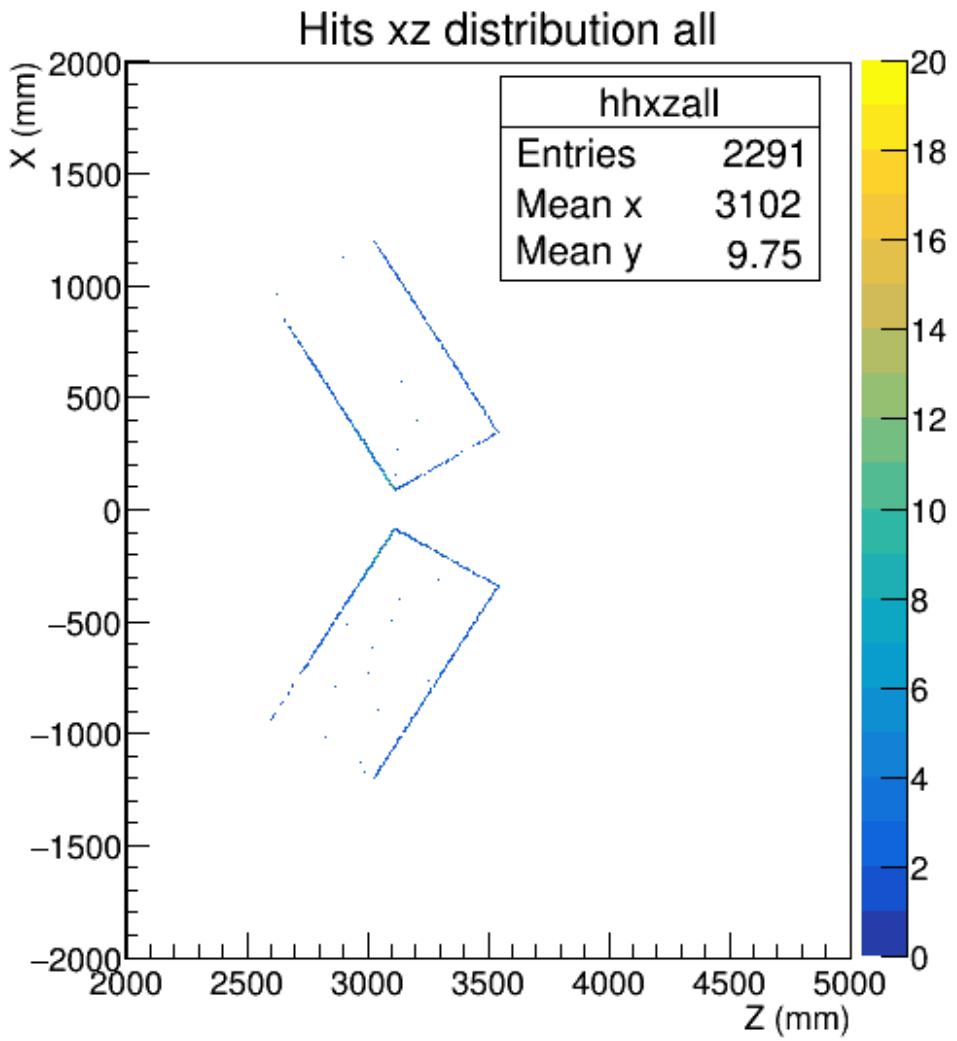
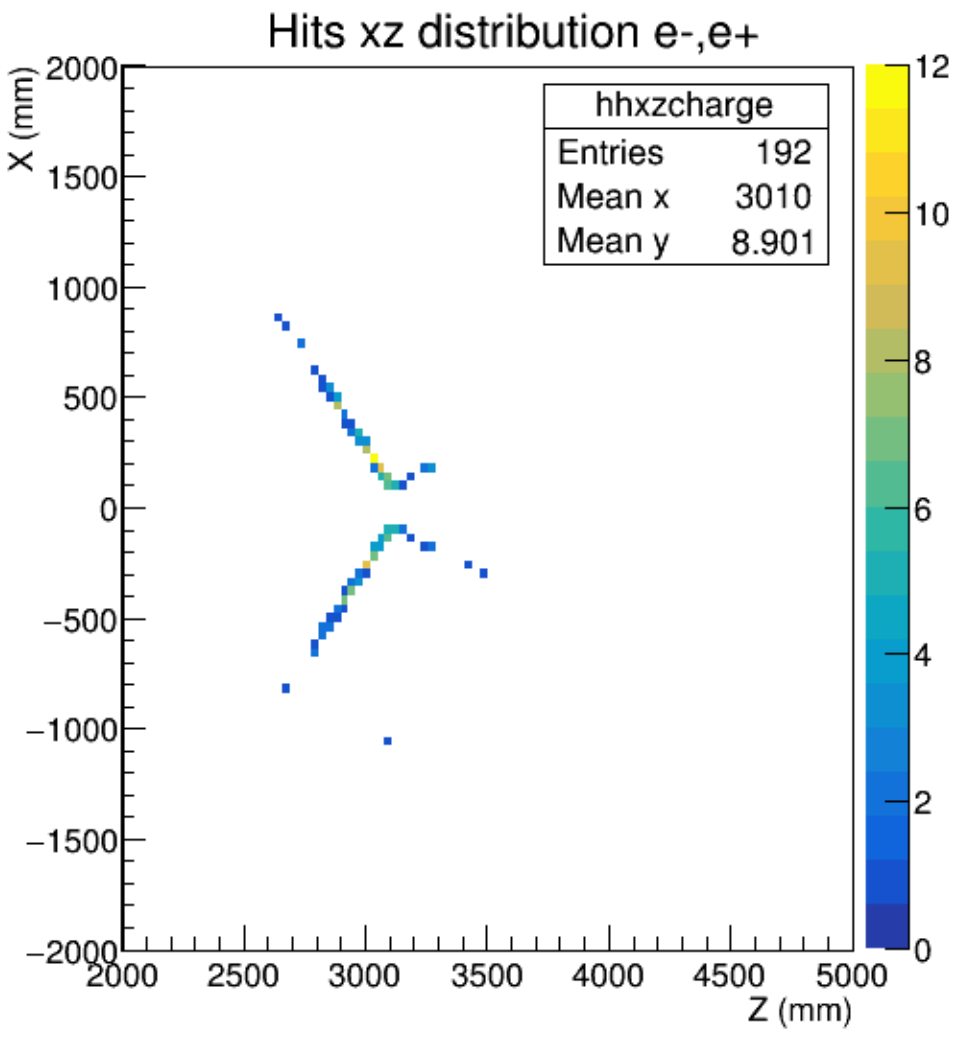
Track in detector volume

10.72M e-

All tracks entering detector container volume

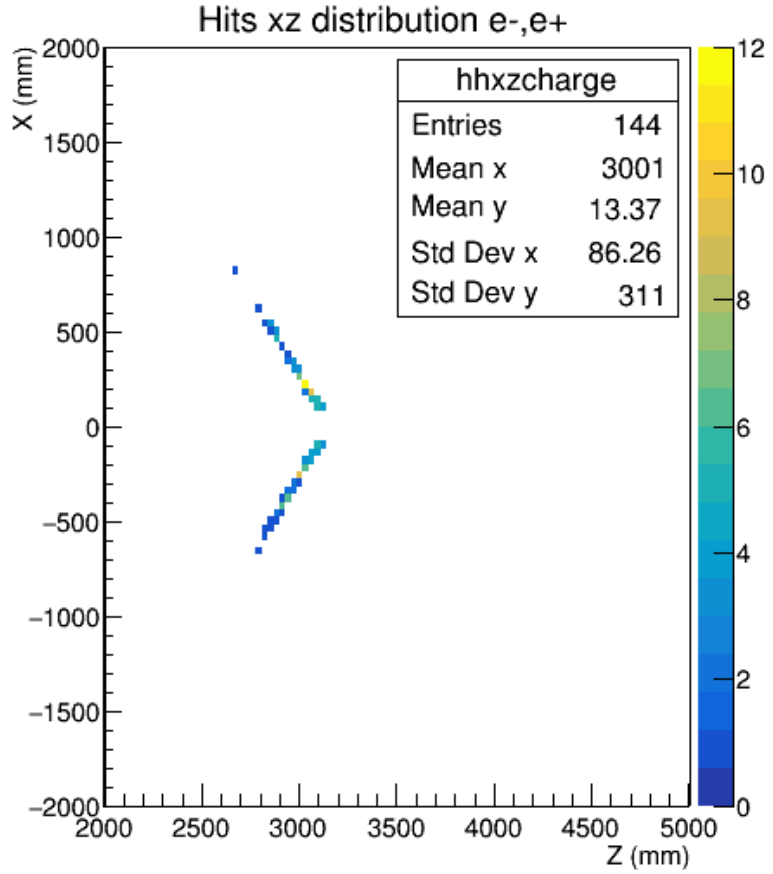


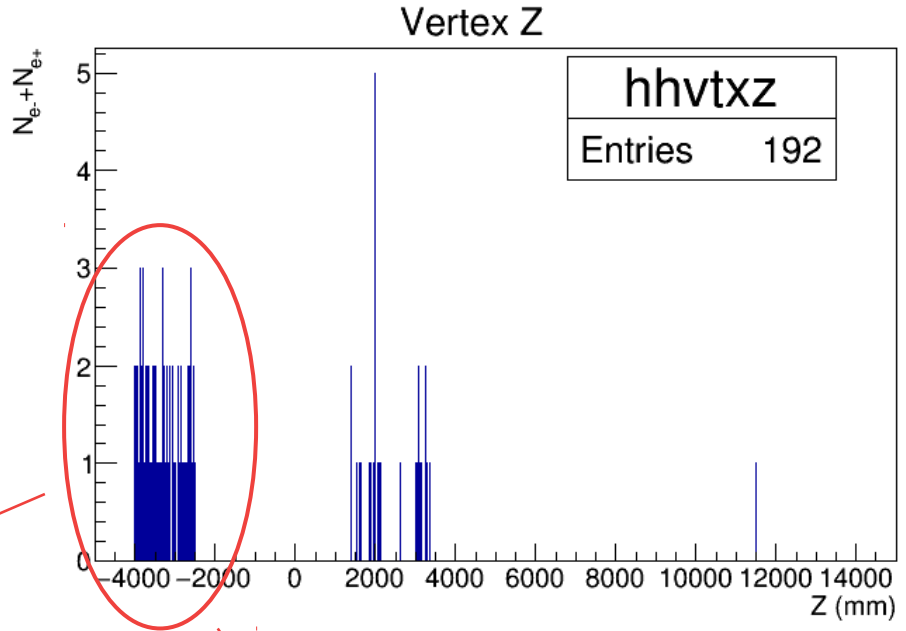
e+e- tracks entering detector container volume

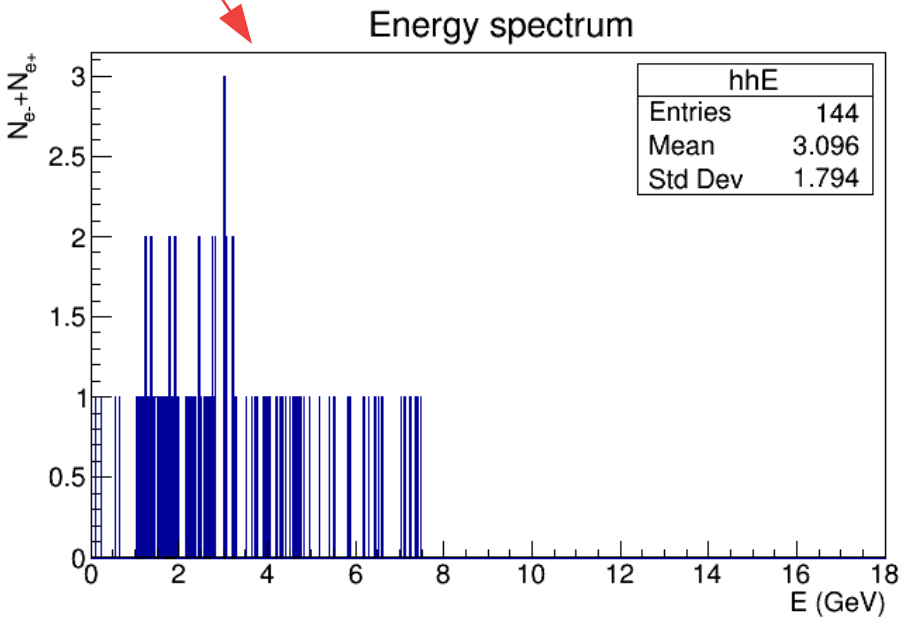


Hits with origin in collimator

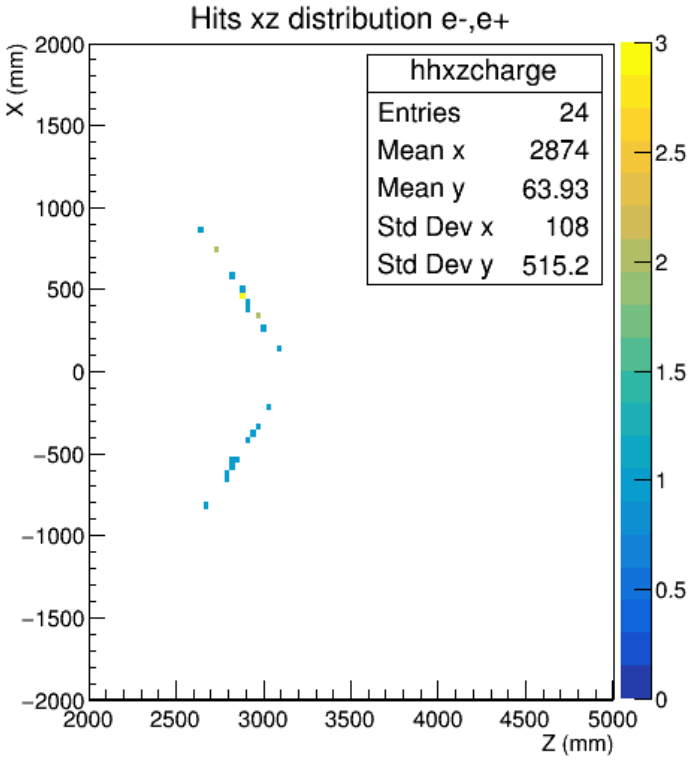
10.72 M electrons of
17.5 GeV
with 35 μm tungsten target
were simulated

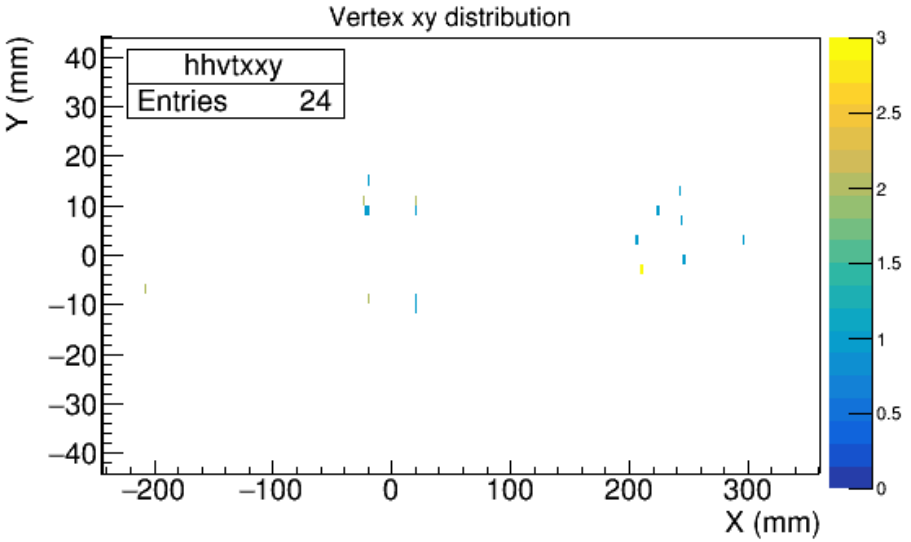


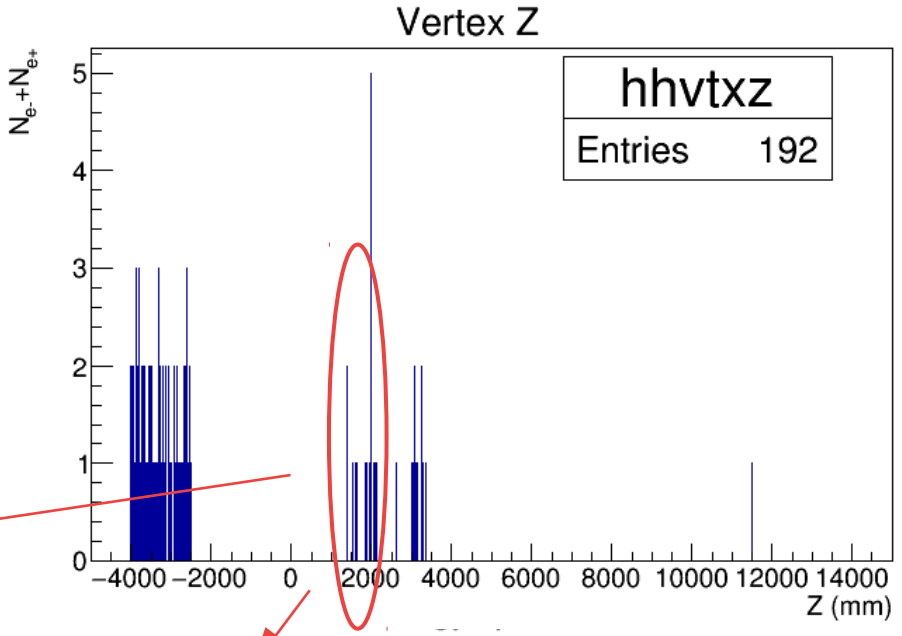


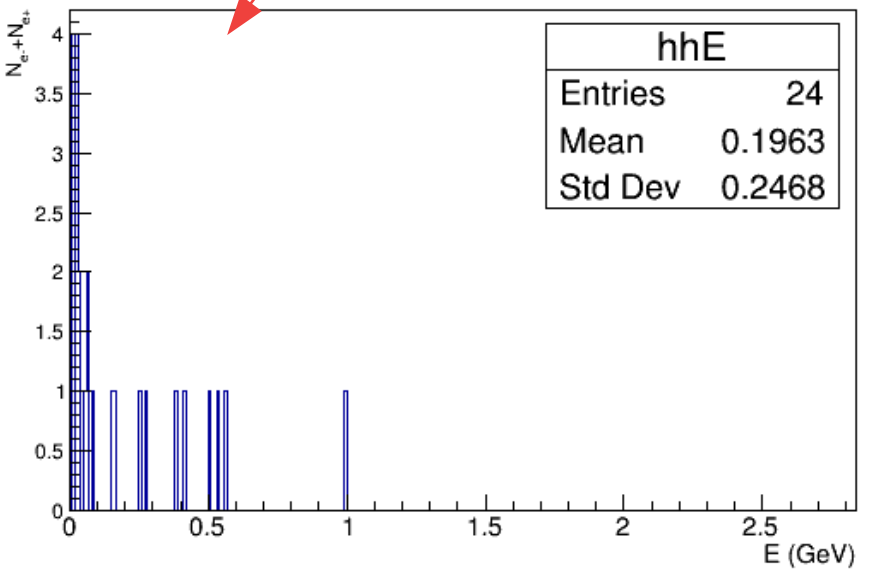


Hits with origin in spectrometer magnet

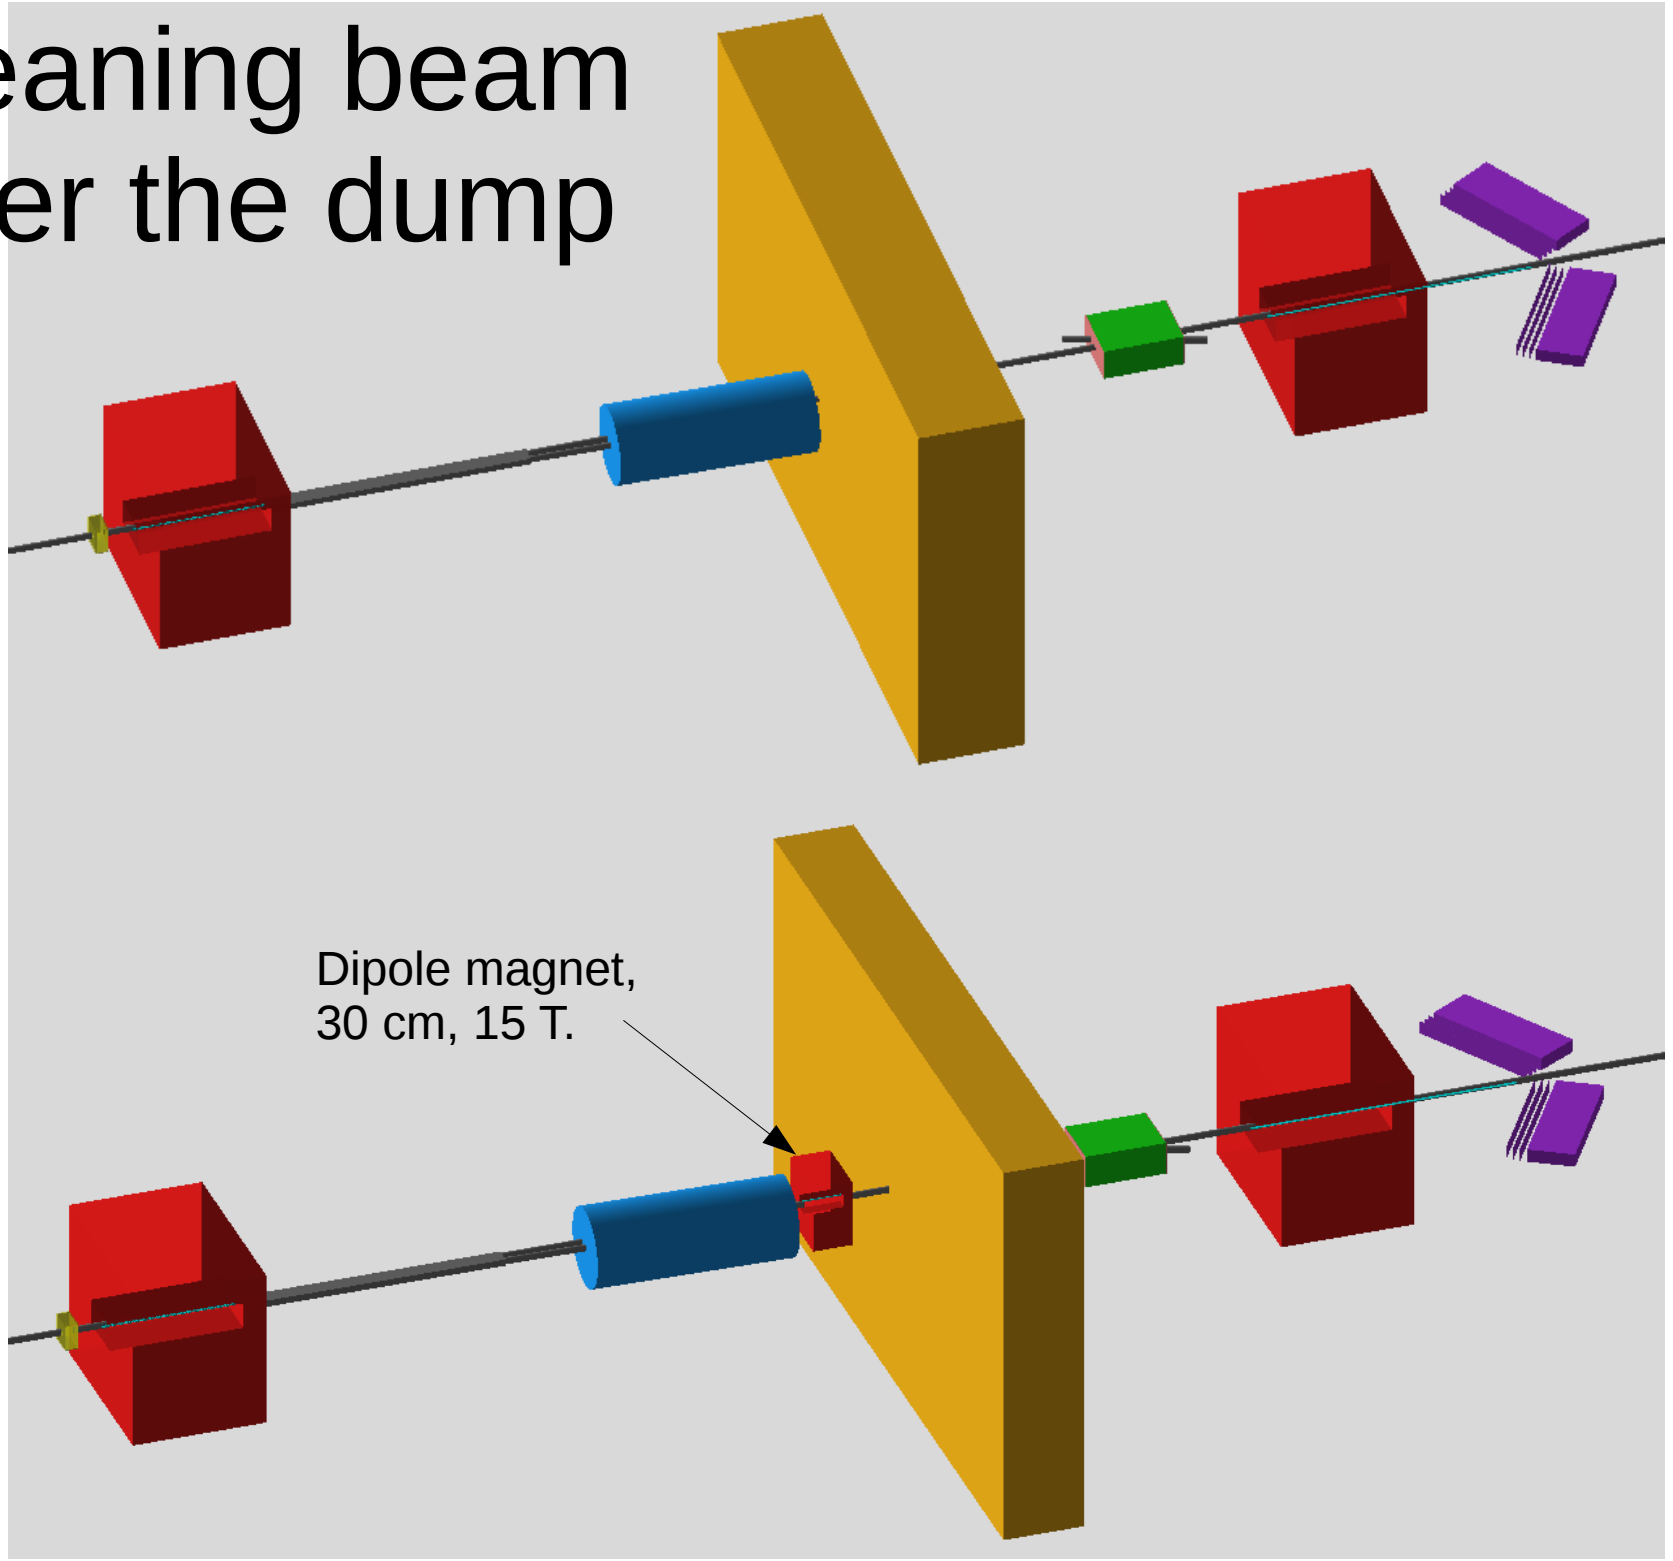




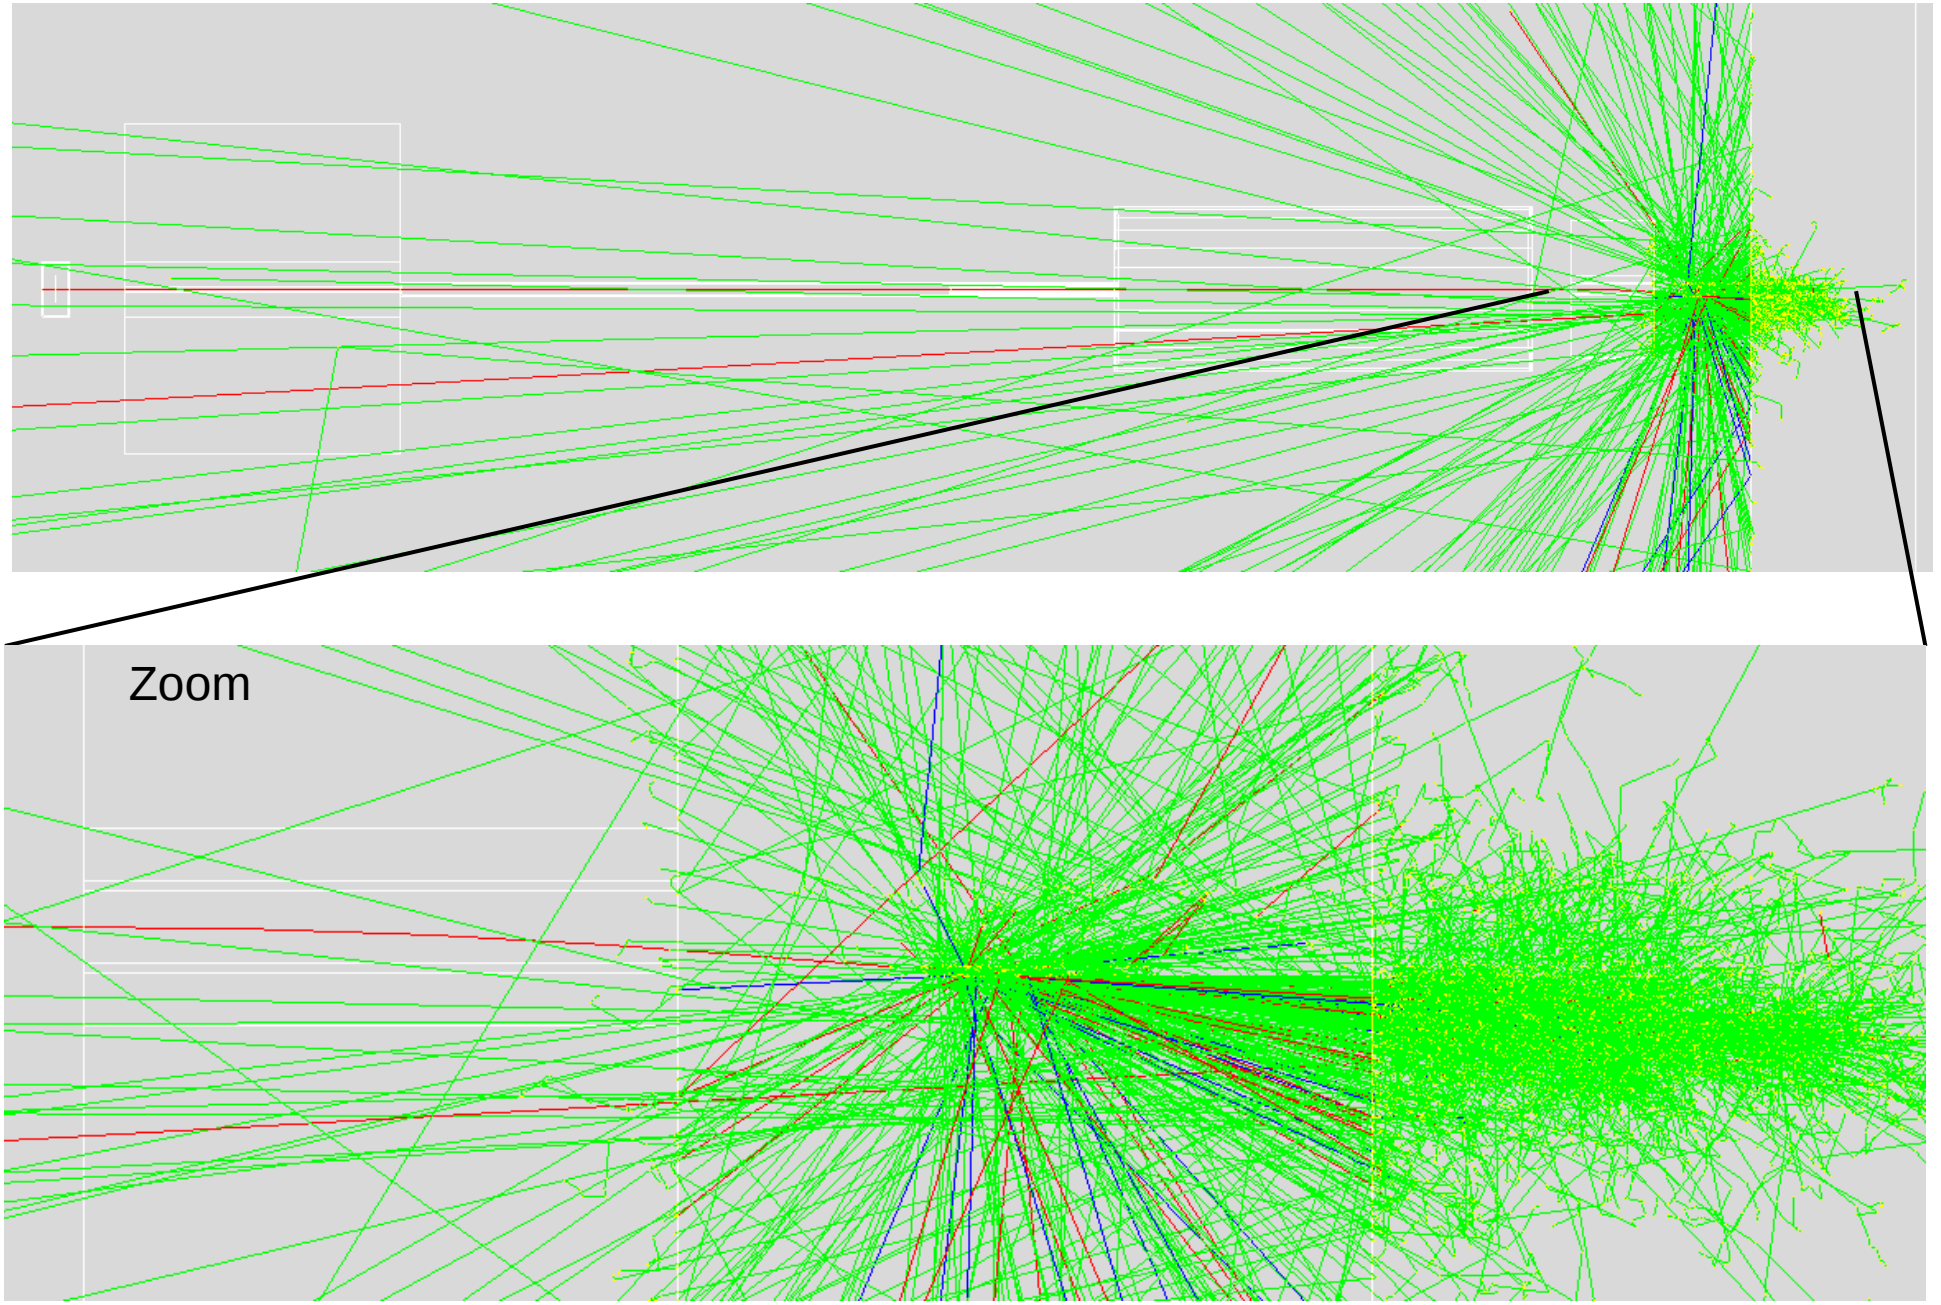




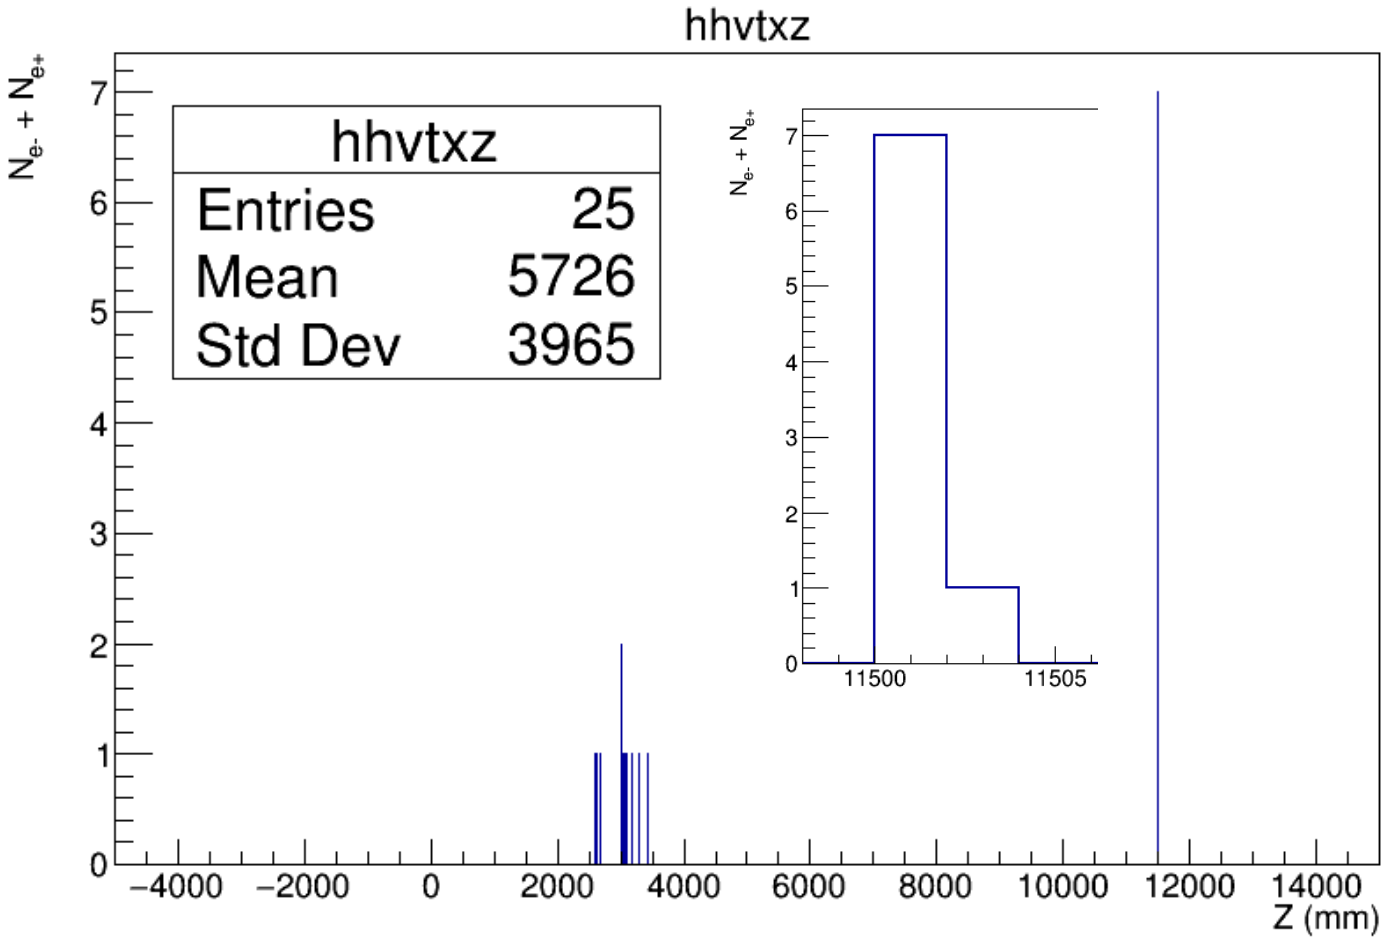
Cleaning beam after the dump



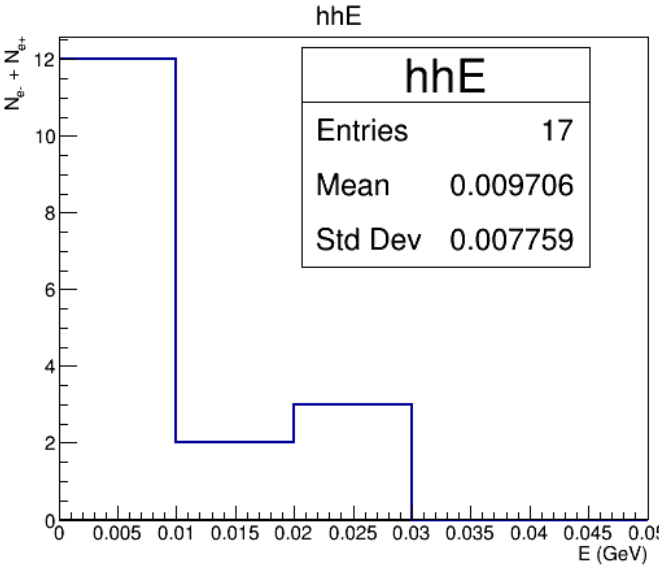
e-, 17.5 GeV

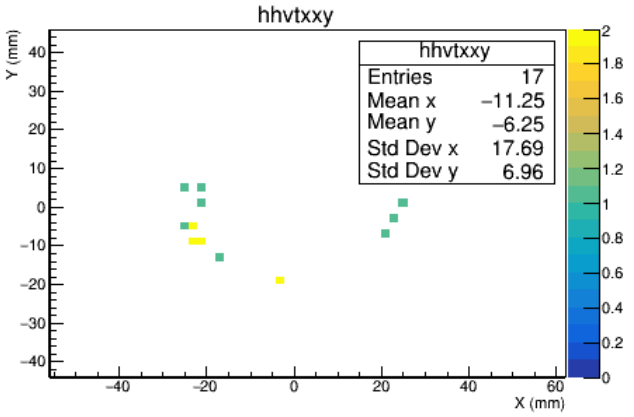


Z distribution of charged vertexes

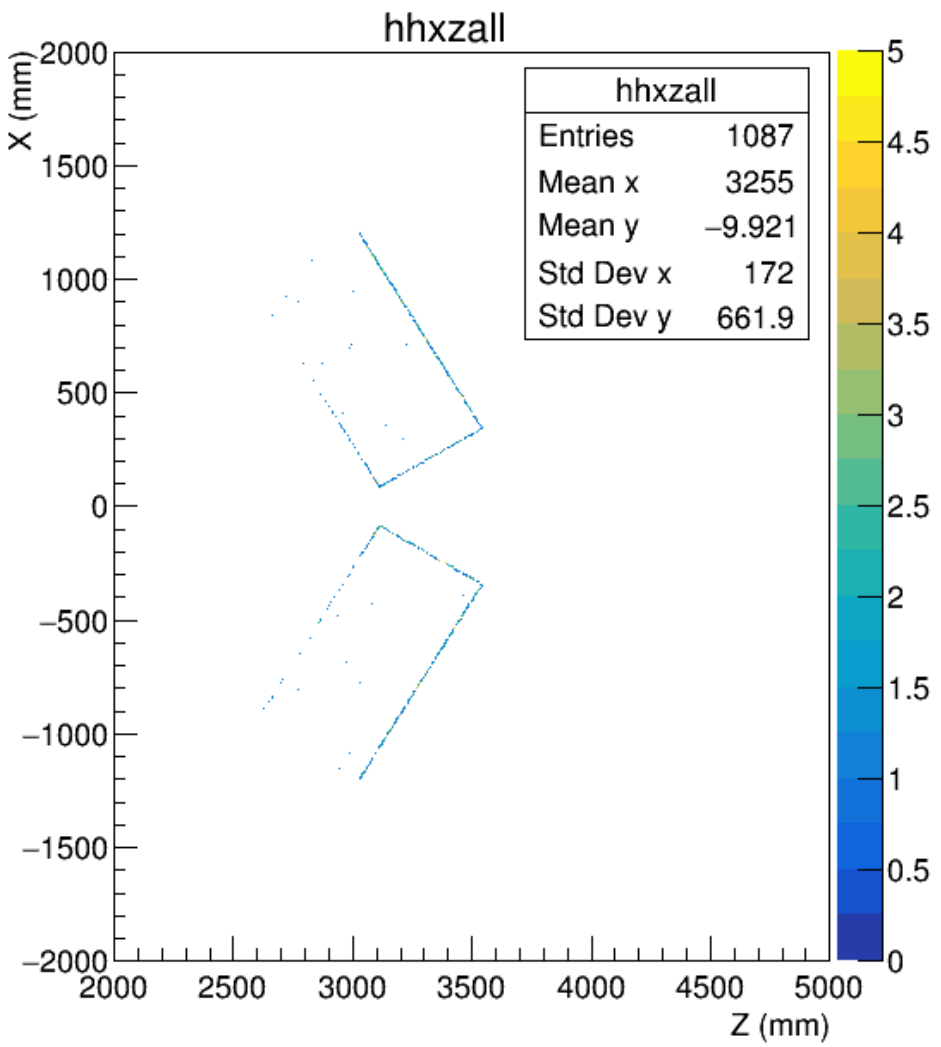


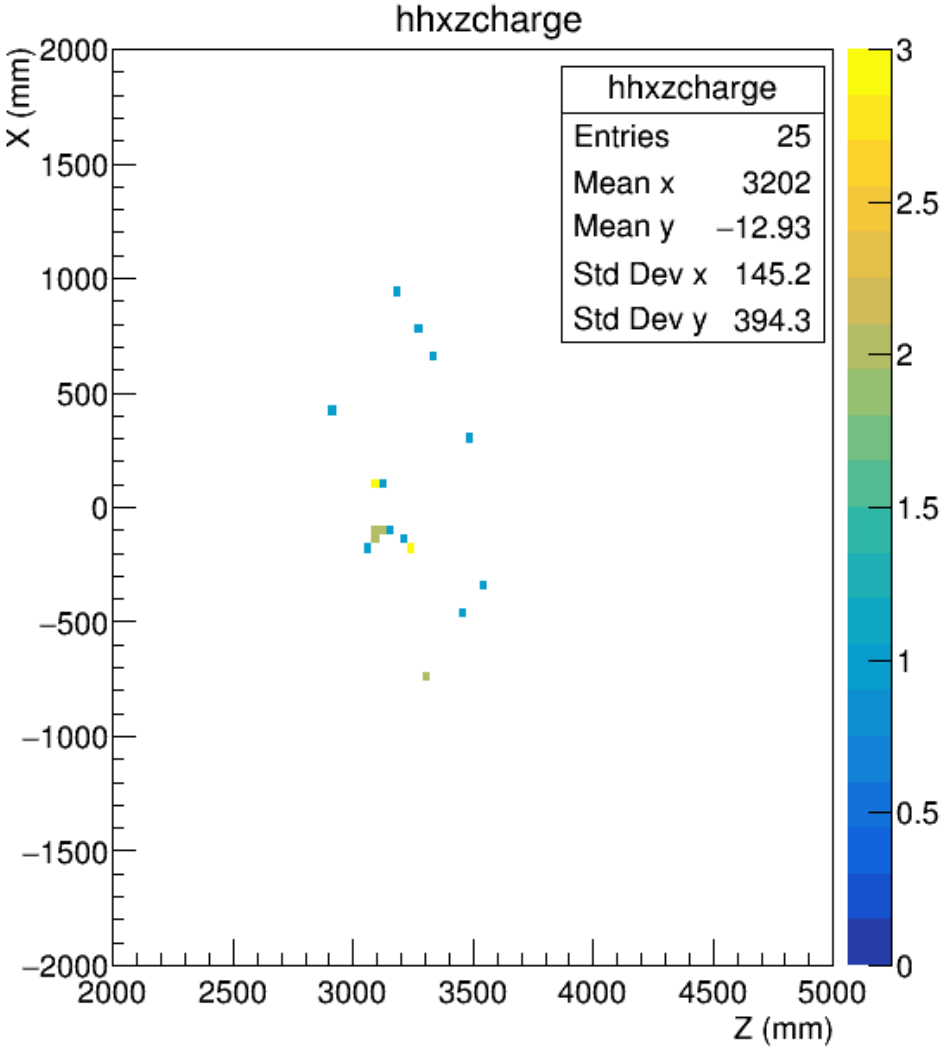
13.54 M e-



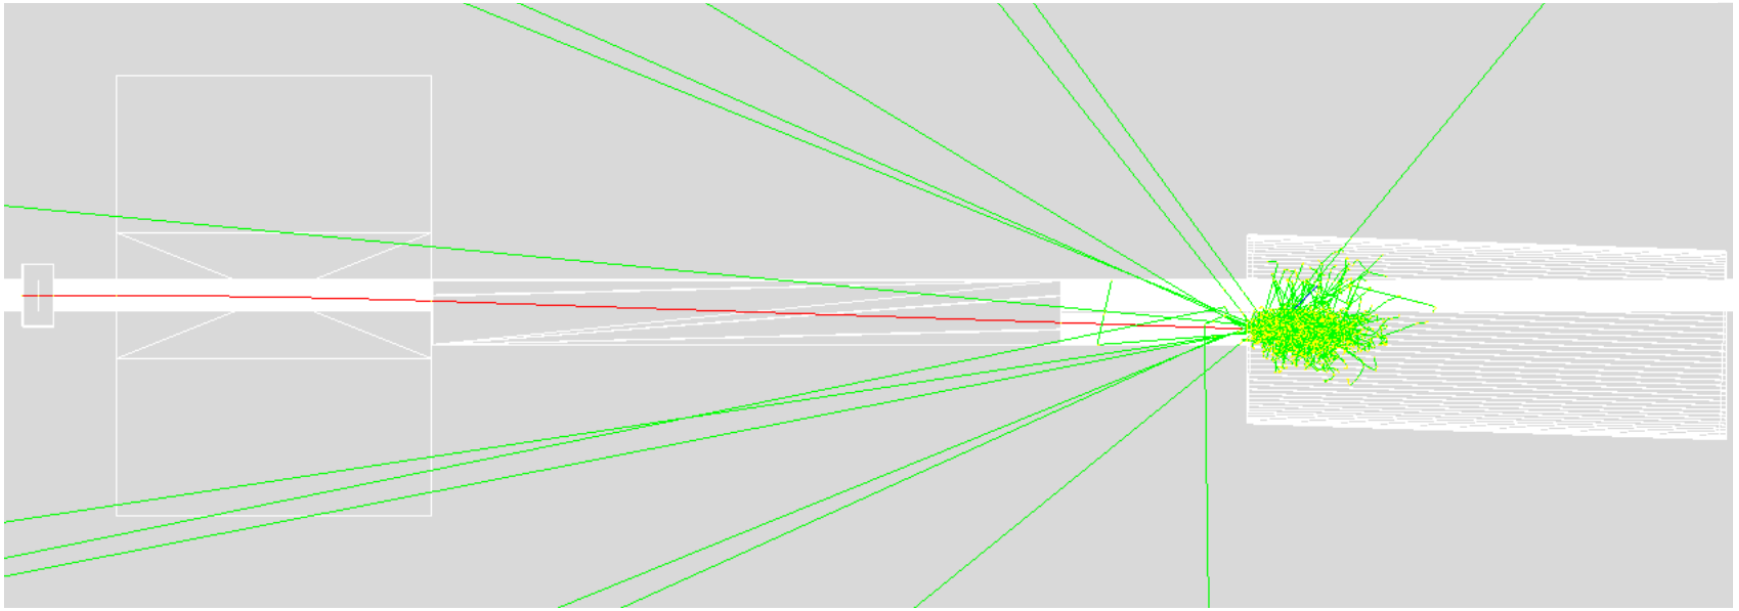


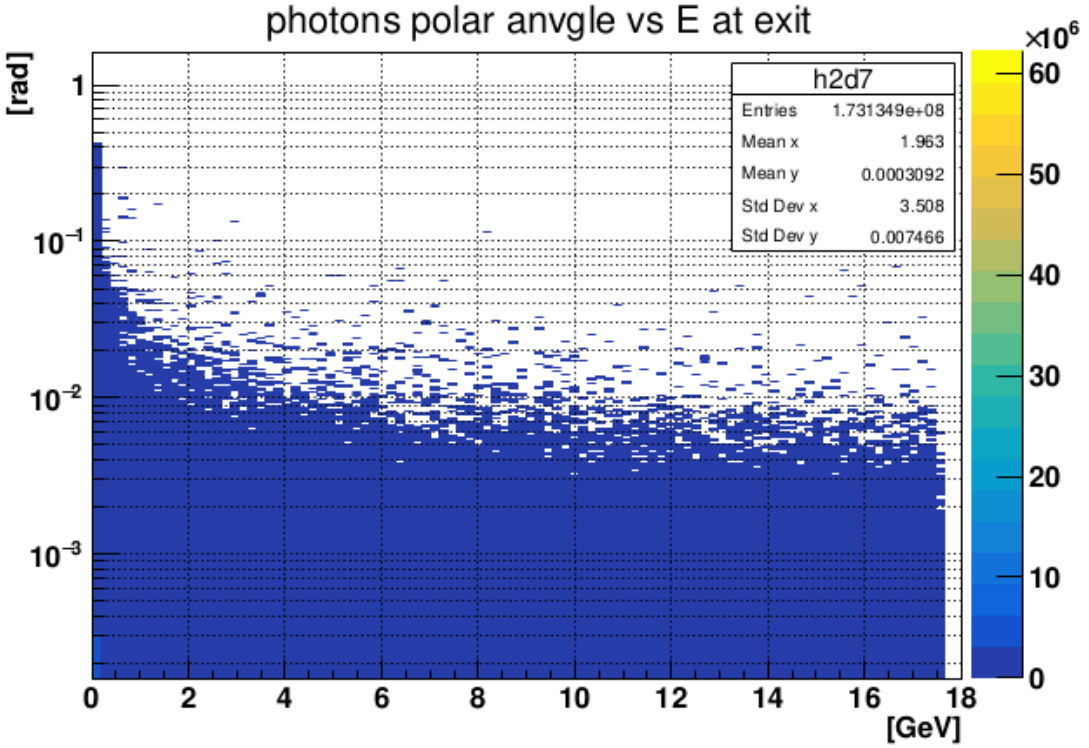
X vs Z Distribution of all and charged





Beam Pipe D = 10 cm

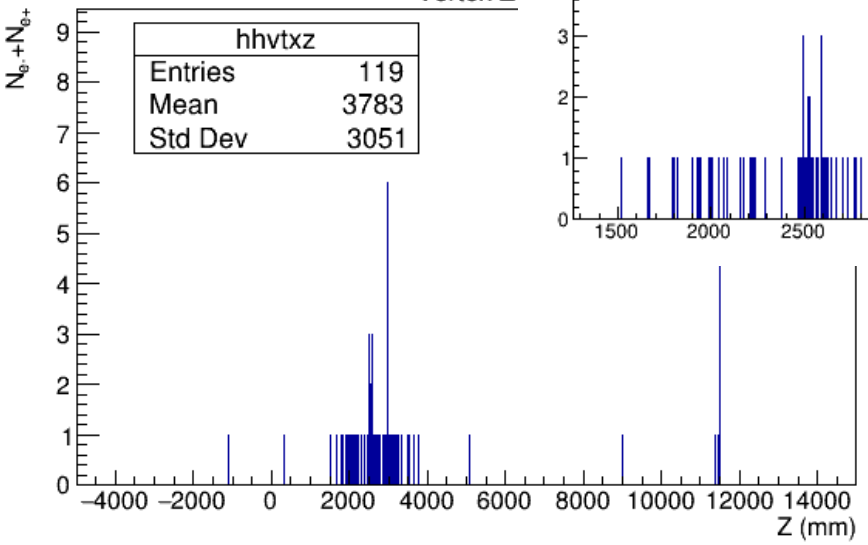


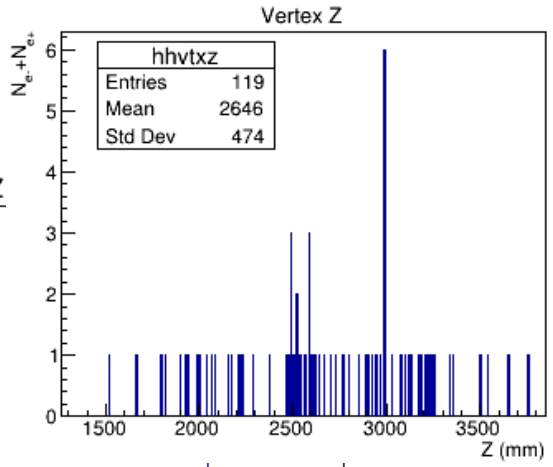


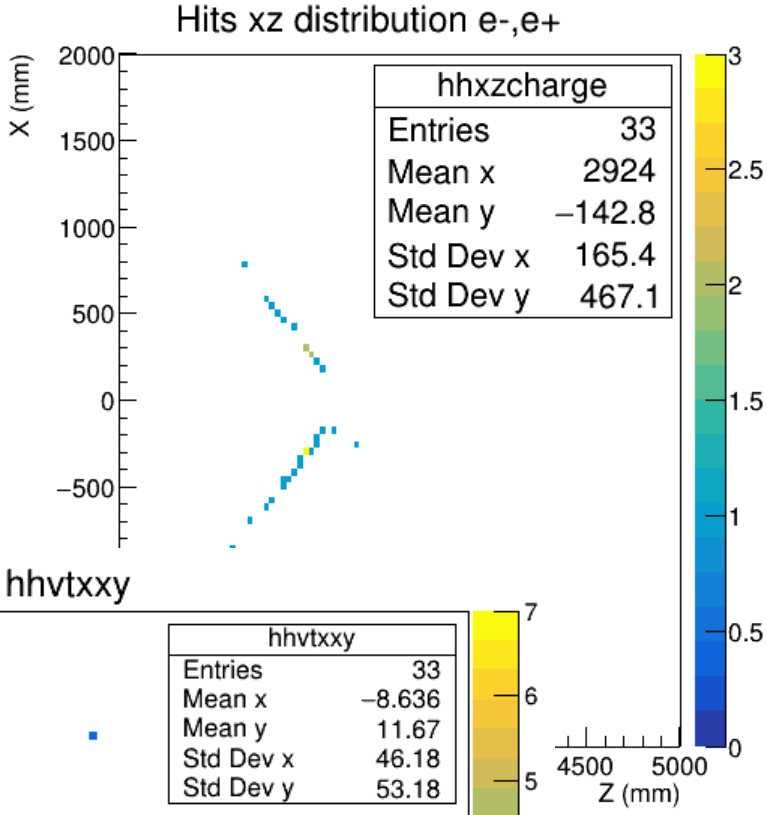
Electron energy (Ev): 1.75e+10
Magnetic field (T): 2
Curvature radius (m): 29.1869
Displacement at the exit from the magnet (m):0.017136
Angle (rad): 0.0342687
Displacement at 2.6 m from the magnet (m): 0.10627

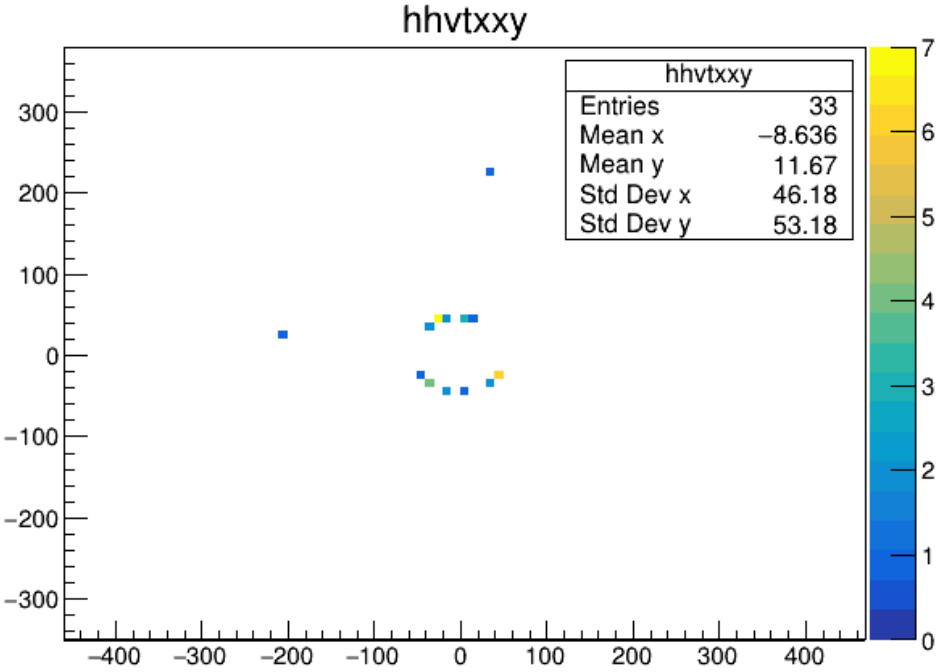
Beam Pipe D = 10 cm. Tracks in detector volume.

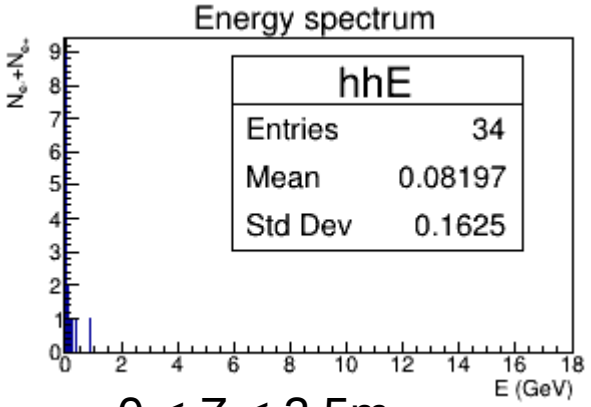
3M e-;
1m < Z < 2.5m







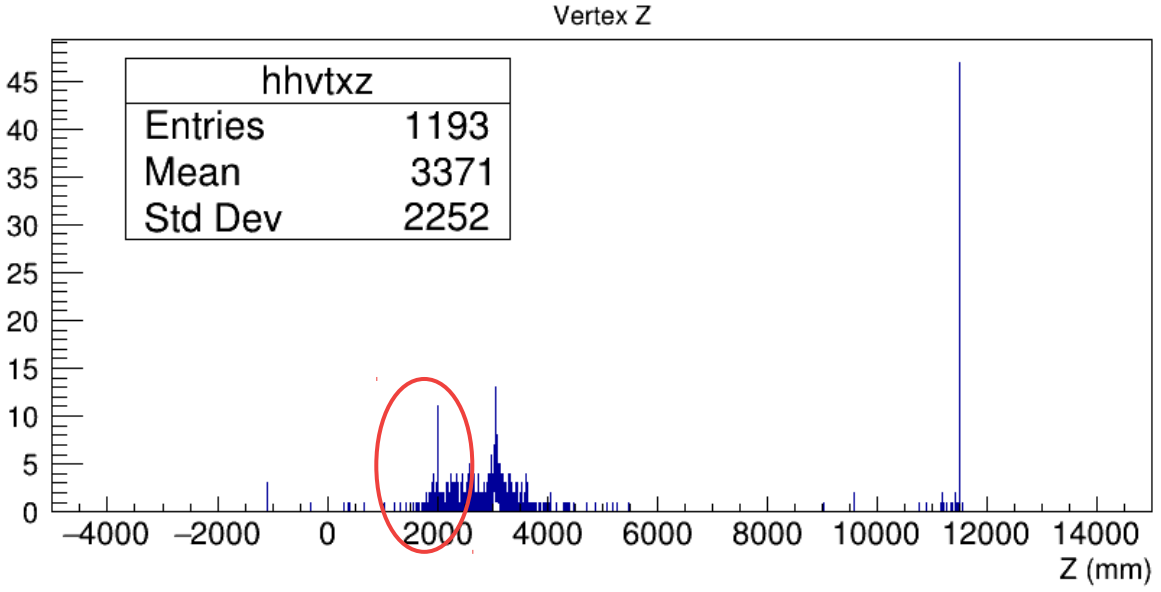


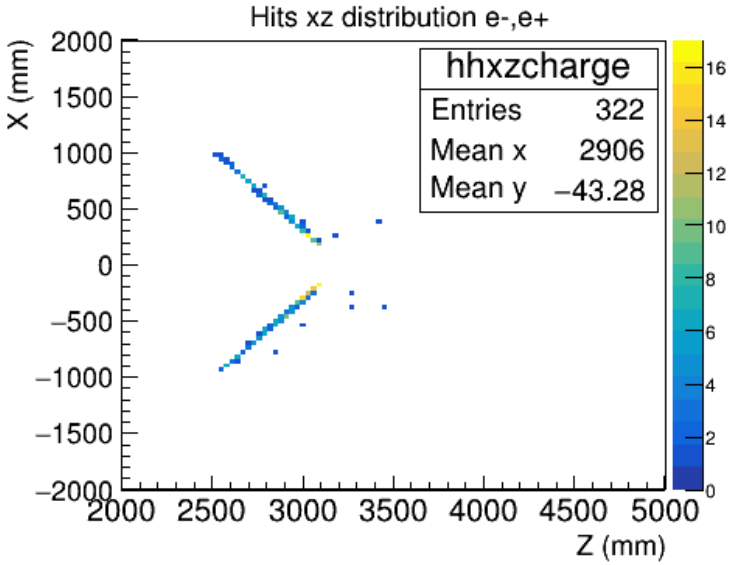


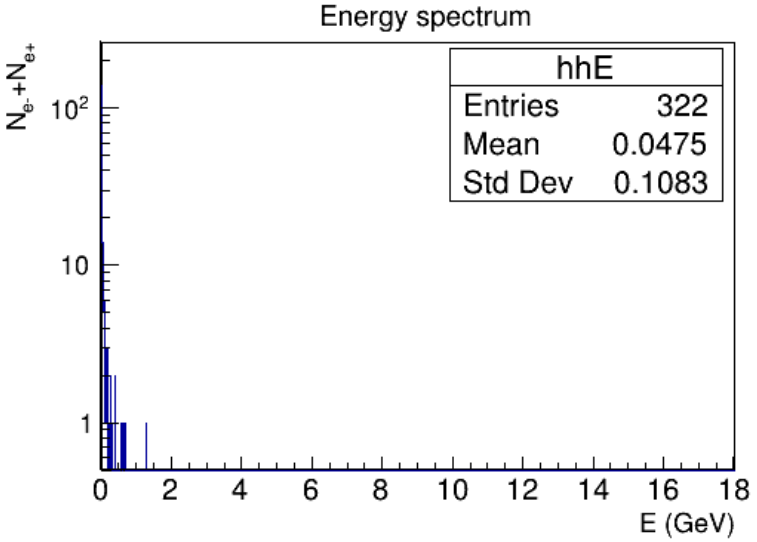
0 < Z < 2.5m

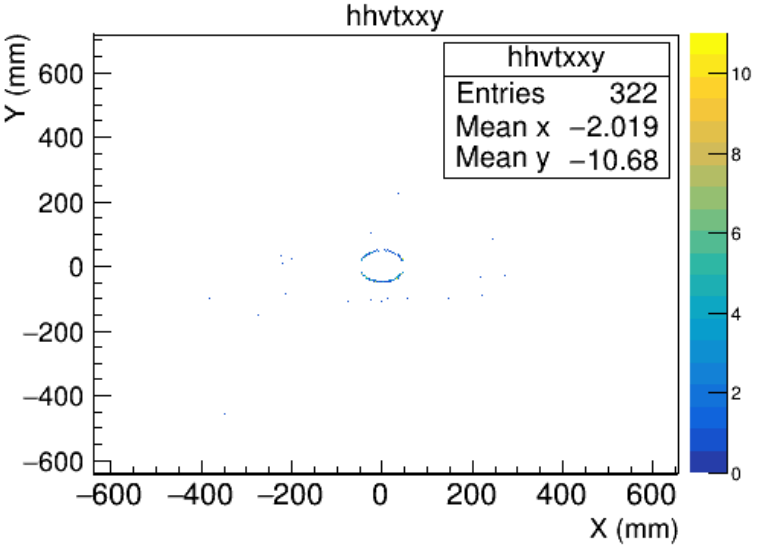
Beam Pipe D = 10 cm. Vertexes of the e+, e- tracks in detector volume.

30M e-;
1m < Z < 2.5m; (Spectrometer magnet)



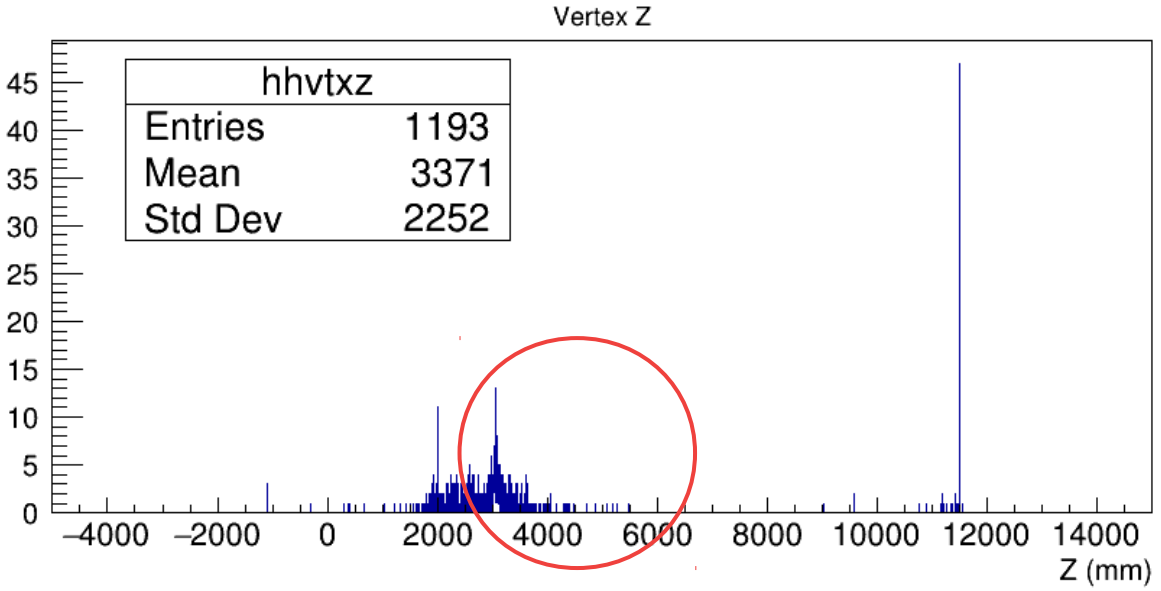


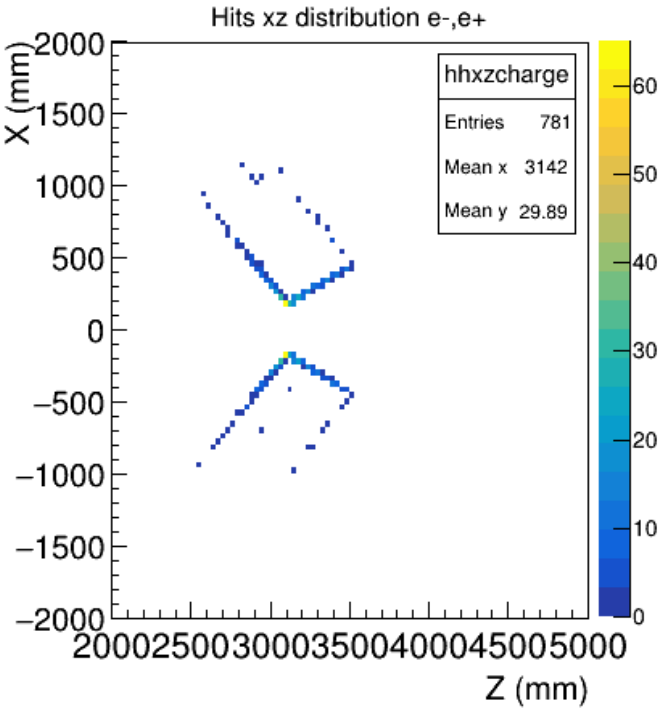


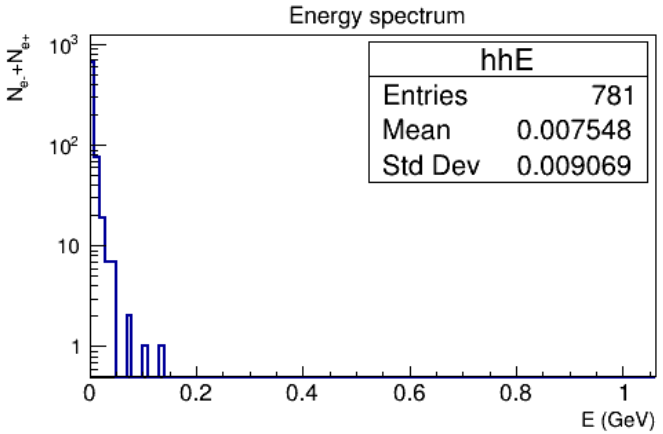


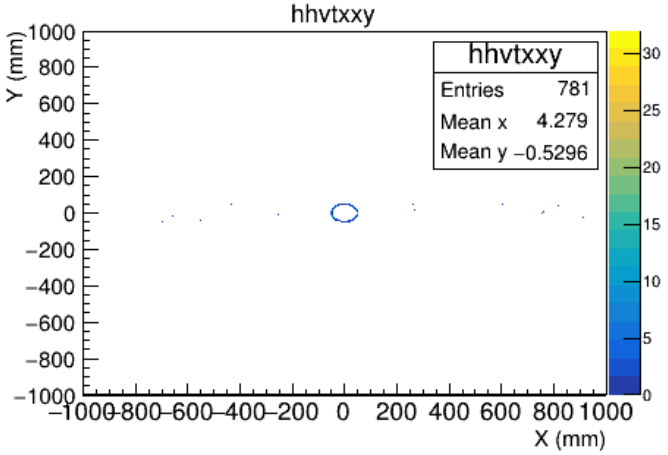
Beam Pipe D = 10 cm. Vertexes of the e+, e- tracks in detector volume.

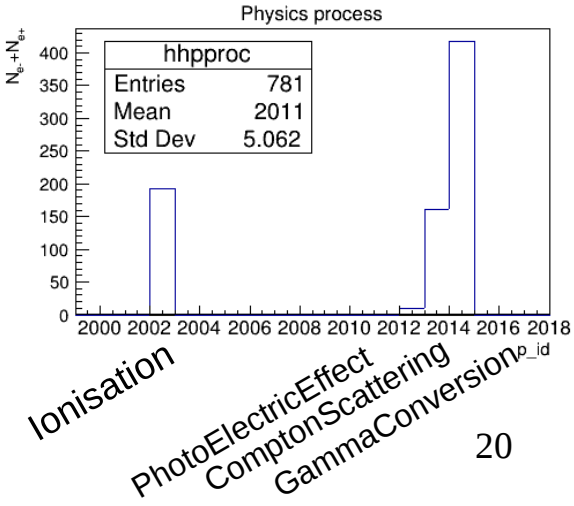
30M e-;
2.5m < Z < 6m; (detectors and beam pipe)





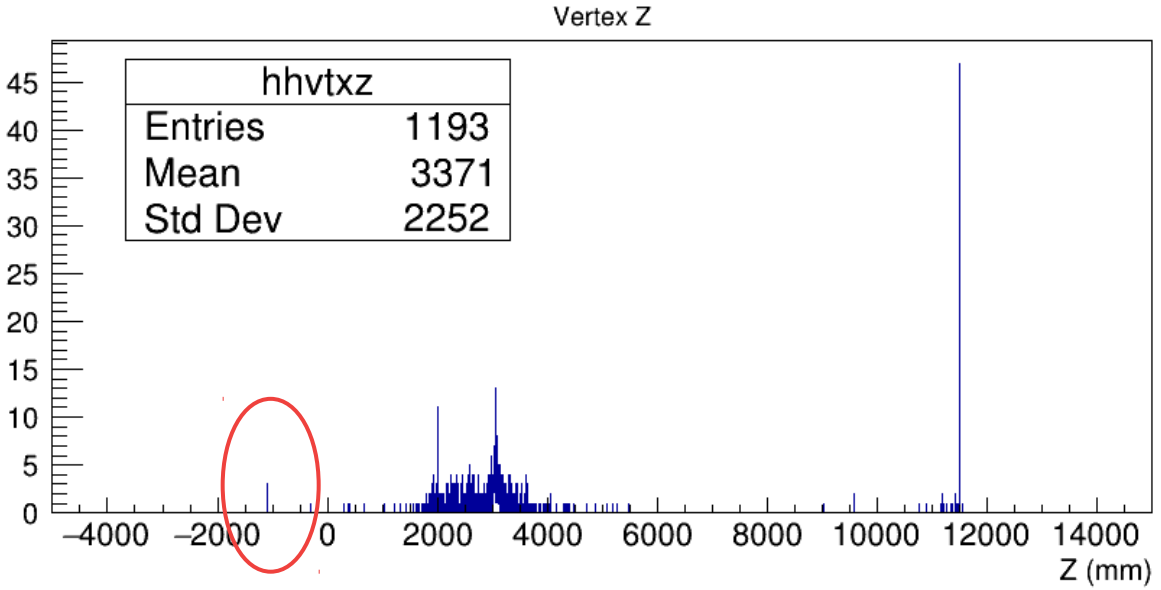


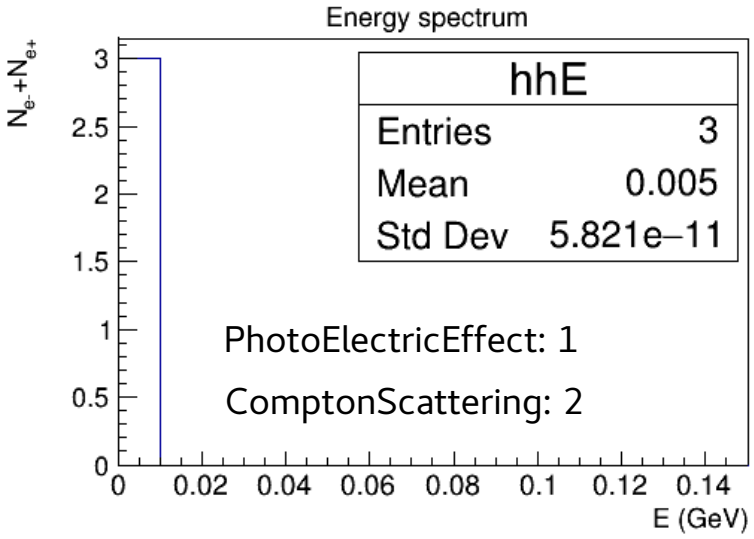


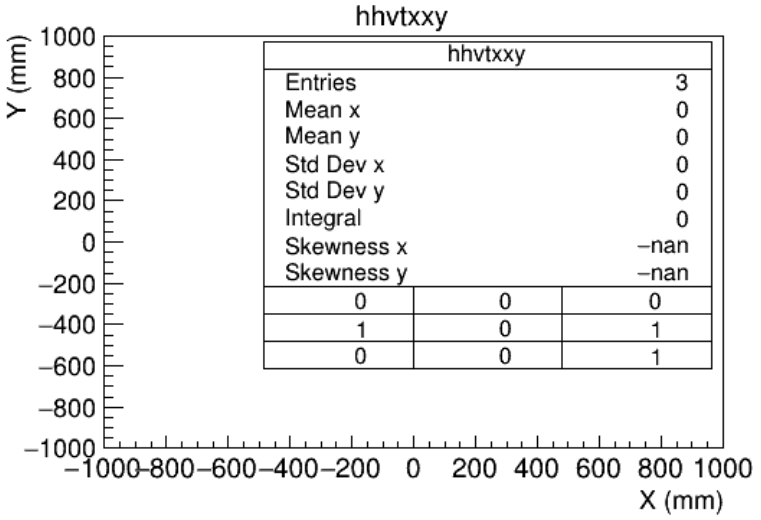


Beam Pipe D = 10 cm. Vertexes of the e+, e- tracks in detector volume.

30M e-;
-1.2m < Z < -1m; (Shielding)

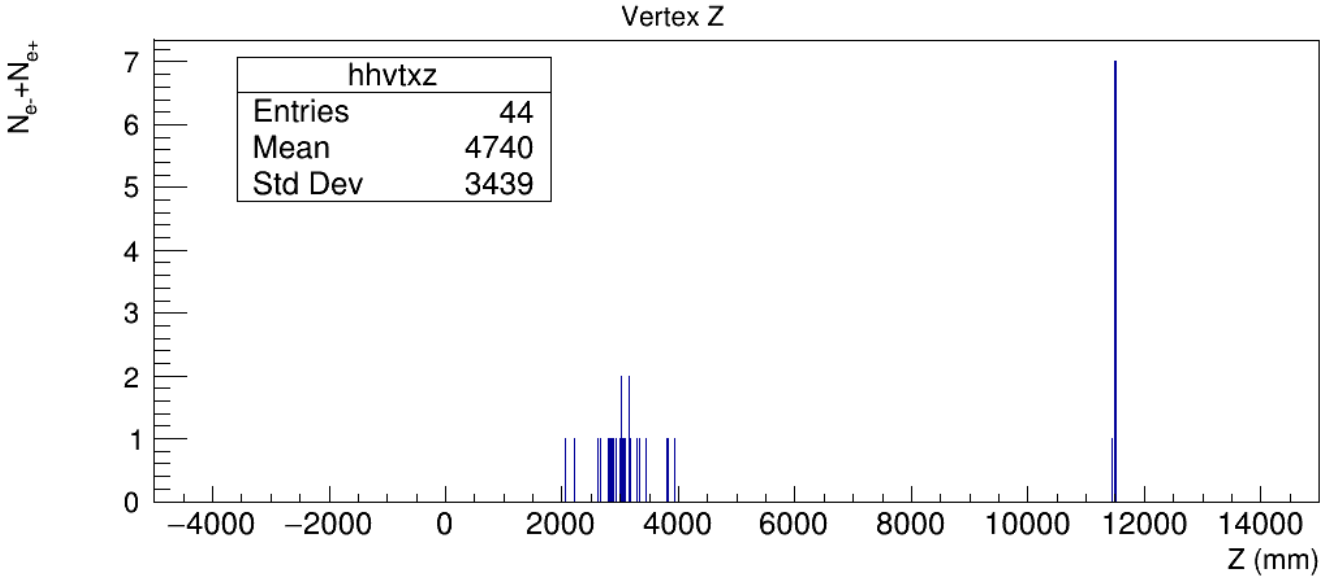


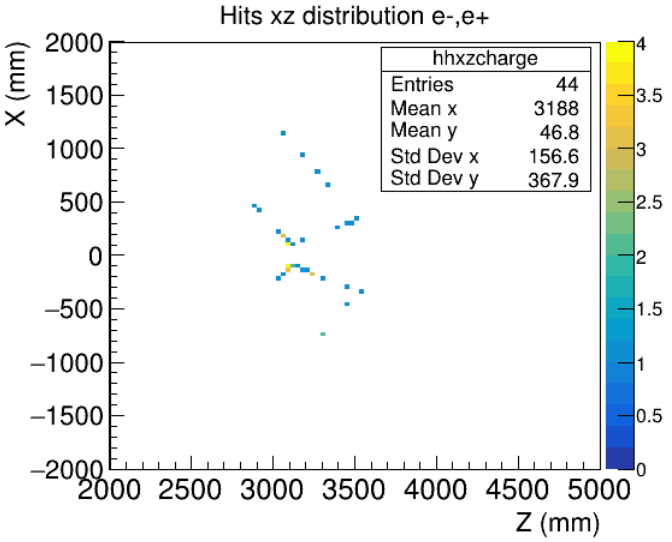


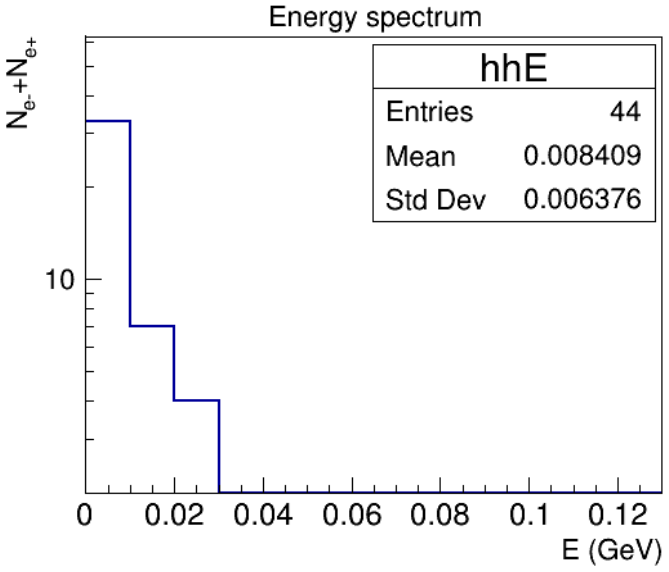


Beam Pipe D = 5 cm, Geometry with a magnet between beam dump (collimator) and shielding. Vertexes of the e+, e- tracks in detector volume.

~3M e-;
Statistically can be compared with the simulation on slide 18

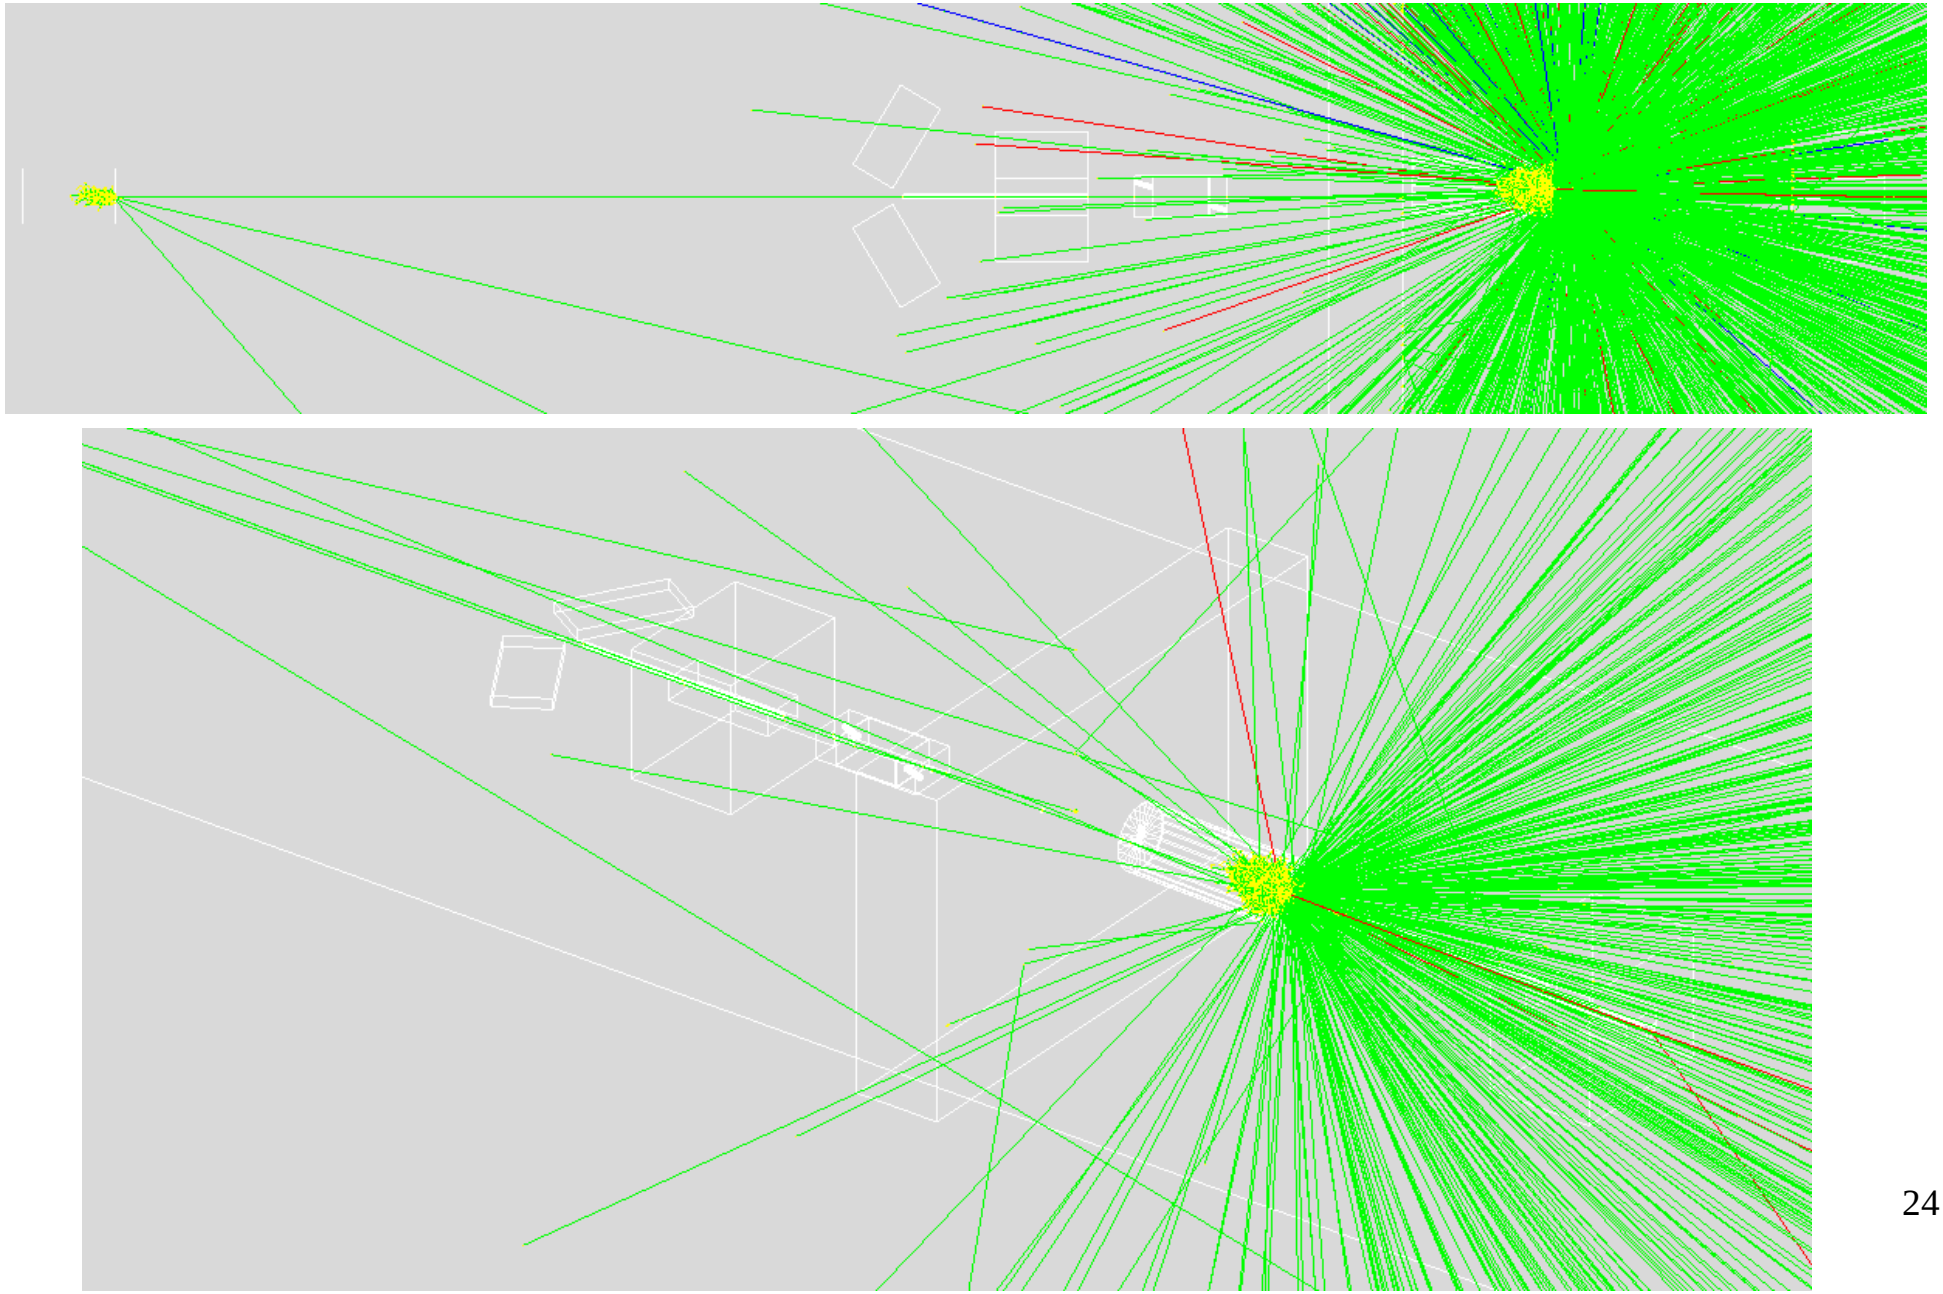






Backup

Tungsten Target, 1.4 T, ~30 e-



Sketches of Bremsstrahlung Area
