# First Beam Pictures and Plots

- <http://cmsdoc.cern.ch/cms/performance/FirstBeam/cms-e-commentary09.htm>

a full night of splash events (2 weeks ago)

circulating beam 1 (sat 21/11)

DESY did not miss the action - only the champaign ;-)

# Review: Subsystem Integration

Component	L1	HLT	Pixel	Strip	Ecal-Presh	Ecal	Hcal	DT	RPC	CSC	HLX	Beam	Castor

Shift Description	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓			
Actions	✓	✓*	✓*	✓*	✓*	✓		✓*	✓*	✓			
Reference Histograms	✓		off at present	✓		✓	✓	✓	✓				
FED Integrity	✓	--	✓	✓	✓	✓	✓	✓	✓	✓	--	--	
DCS in Orcoff		--	work ongoing	work ongoing	work ongoing		work ongoing	work ongoing	work ongoing	work ongoing	--	--	

✓\*: criteria when to contact subsystem experts are provided, but not always clear if good or bad

# Review: Issues / Plans

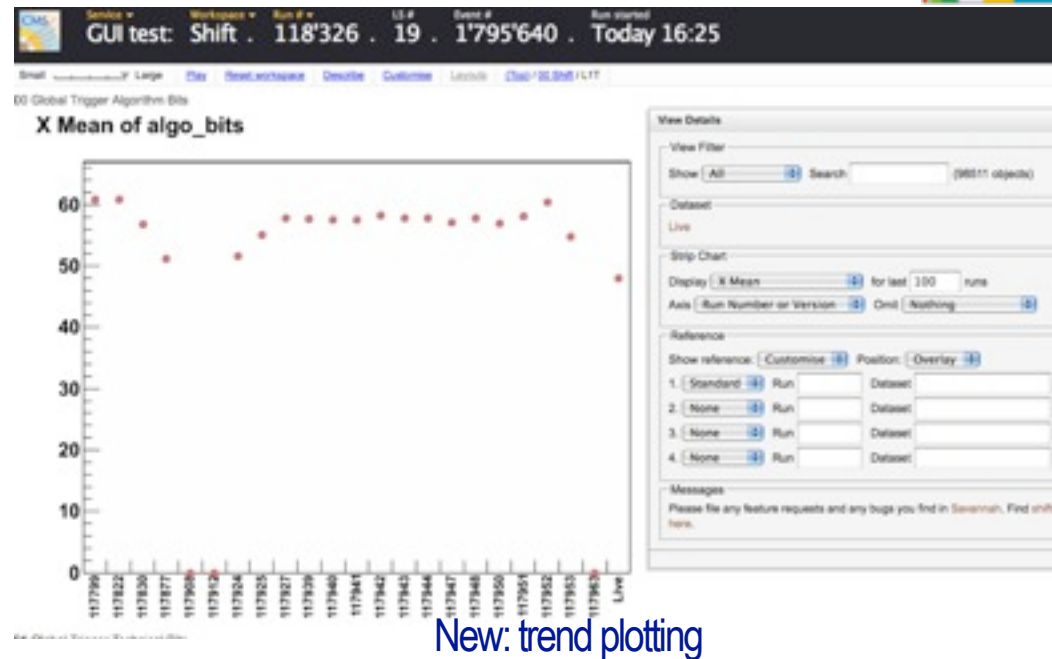

- **Retrieve detector status info from event to reset DQM histograms during the run (at different transitions)**
  - GT (global run status, e.g. safe for injection/pre-physics/mu,cal/mu,cal,trk/mu,cal,trk,pix) → use for histogram block/reset
  - Scaler FED (coarse DCS info, e.g. status word 32 bits) => monitoring (for lack of DCS in Orcoff)  
ready for first tests, waiting for data recorded with global DCS
- **Injection of DQM results into database (OMDS and/or DIP) for**
  - Lumi (HF) monitoring
  - Beamspot position monitoring
- **Online Installation:** 2 new FTE started beginning of Nov: Srecko Morovic (Zagreb) and Amita Raval (DESY)
  - Triplicate system: Production, Test, Development: Test system must made realistic copy of production system
  - SMPProxyServer: more flexible trigger and HLT output selection
  - Run Control Function Manager: stop gracefully at run end (at present: kill)
- **DQM histogram collection/summation from HLT** by StorageManager and EventFilter developers
  - Updates of EVM-FUEP-SM code underway (not yet available)
- **FED Integrity checking**
  - to be re-included in HLT menu

# Review: DQM GUI

Lassi Tuura

- Recent Update (5.1.4)
  - Fixes of performance and memory consumption
  - Side-by-side view of same histos from different datasets / runs
  - Trend plotting
- Splash events:
  - 1.2 million plots / day (sessions \* histos on page \* updates)
  - 90-180 ms server response time

- Next steps: Further improvements of navigation and histogram viewing
  - use of provenance module application for transport / bookkeeping of conditions and provenance info
  - better navigation, inspection (e.g. top level frame, customization menus stick to glass, focus on single histogram) <https://twiki.cern.ch/twiki/bin/view/CMS/DQMGUIMenuUpdate>
- Looking for help: maintenance / deployment as well as cosmetics of front-end and back-end code

# Review: Operations

## central DQM operator (online DQM)

- On-call phone (165579)
- Updates and horizontal test and integration
  - Code: on demand (daily)
    - to be posted on wiki-page
    - additional posting on DQM-development HN
  - Configurations: on demand (daily)
    - HEAD of CVS
  - Render-Plugins: on demand (weekly)
    - HEAD of CVS
  - Lay-Outs: on demand (weekly)
    - HEAD of CVS

## DQM shift supervisor (online and offline DQM)

- Day-to-day operations
- Shift Tutorials
- Weekly shift summary
- Shift Instructions (including short term):
  - subsystems provide instructions
  - move to using GUI-integrated descriptions / instructions
- DQM shifts report to/via
  - Shift leader / subsystem experts (P5)
  - Offline run manager (offline DQM)
  - Run Registry
  - ELOG
  - Shift supervisor
