

MP Alignment using Cosmics2010

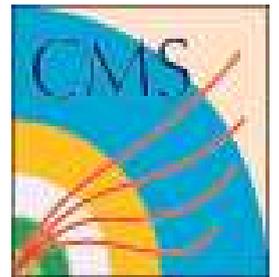

Outline:

First high level structure alignment with MP(BL and RK)

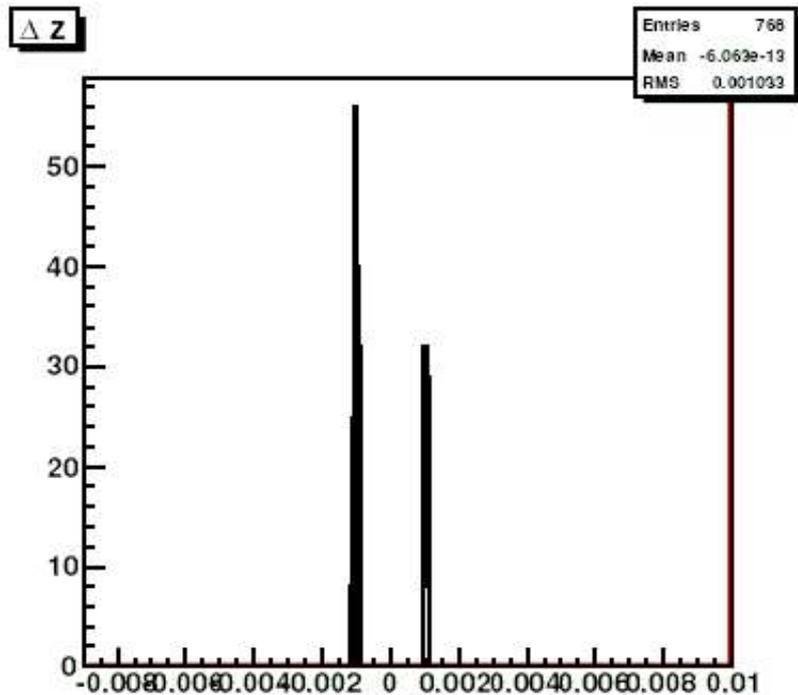

Geometry comparison and Cosmic track Splitting

Jula Draeger
University of Hamburg

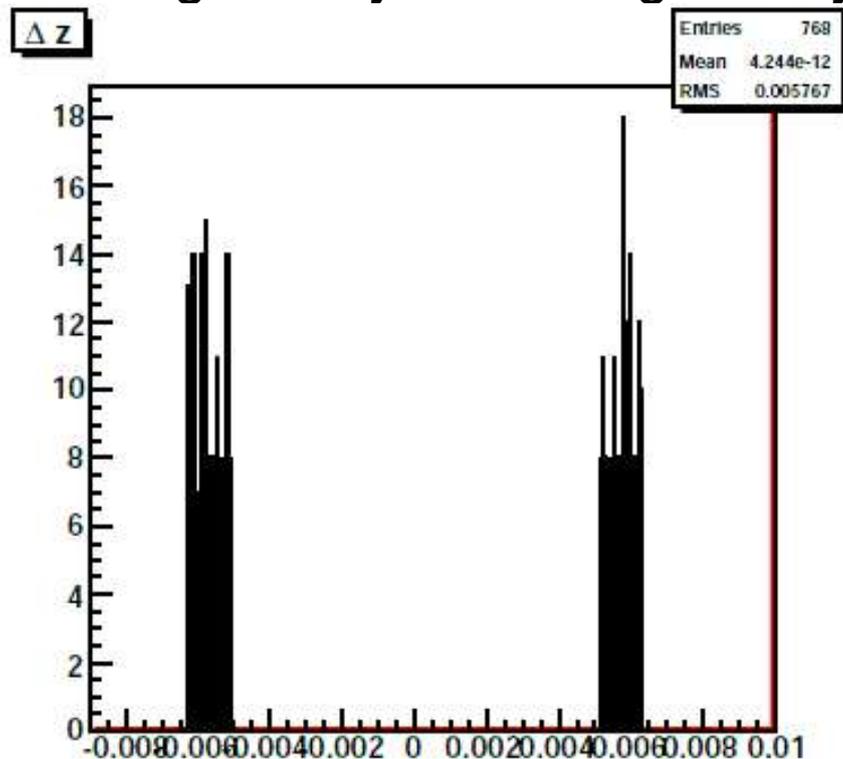

Alignment with **Collision** data starting from Nov09 geometry vs. **Nov09** geometry

- high level structure alignment starting from Nov. geometry
(/afs/cern.ch/cms/CAF/CMSALCA/ALCA_TRACKERALIGN/PayLoads/CRAFT09/TrackerAlignment_2009_v1_prompt/123098-infity/TrackerAlignment_2009_v1_prompt.db)
- Movement of pixel half shells by 10 micron into opposite direction back towards Aug.09 geometry

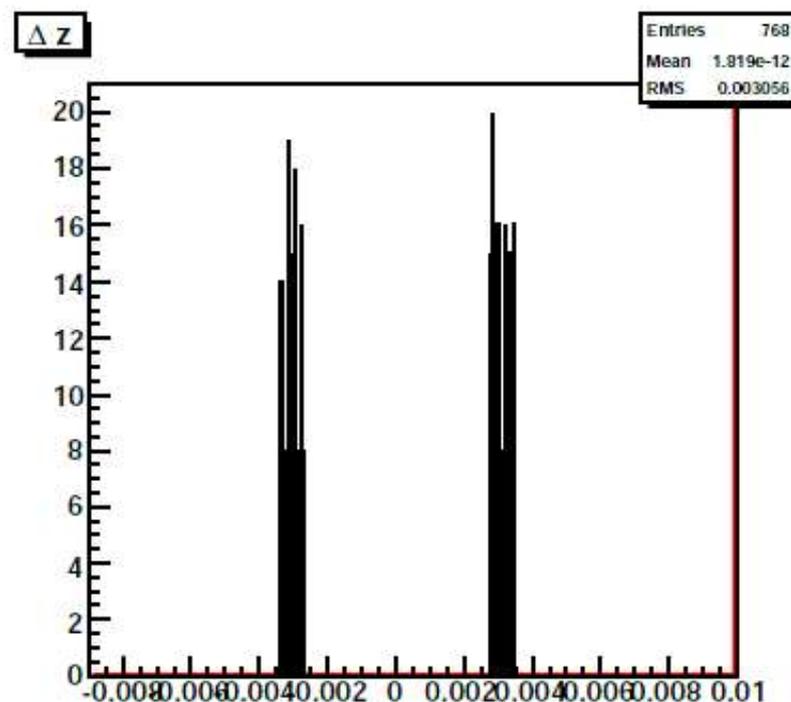

- using CMSSW_3_5_2
- /Cosmics/Commissioning10-StreamTkAlCosmics0T-v3/ALCARECO
 - run range 128706-129433 (available until Sunday 28.02.)
- RungaKutta propagator (default since CMSSW_3_5_1)
- Broken Lines Coarse
- default cosmic track selection --> 948471 tracks after selection
- starting from Nov. geom(mp0098), MinBiasAlignment(mp0099) and Ideal(mp0100)

Nov09 geometry vs. Feb10 geometry

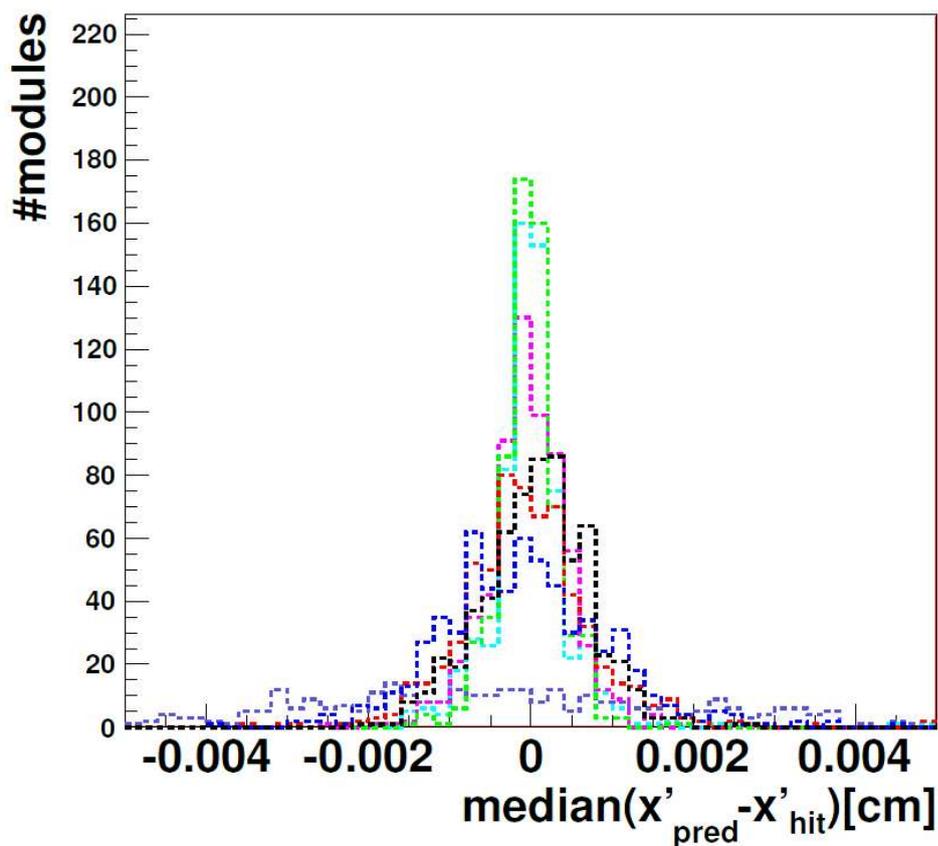

- again pixel-half-shell movement in z observed wrt Nov09 geometry
- 60 micron in opposite direction

MinBias geometry vs. Feb10 geometry

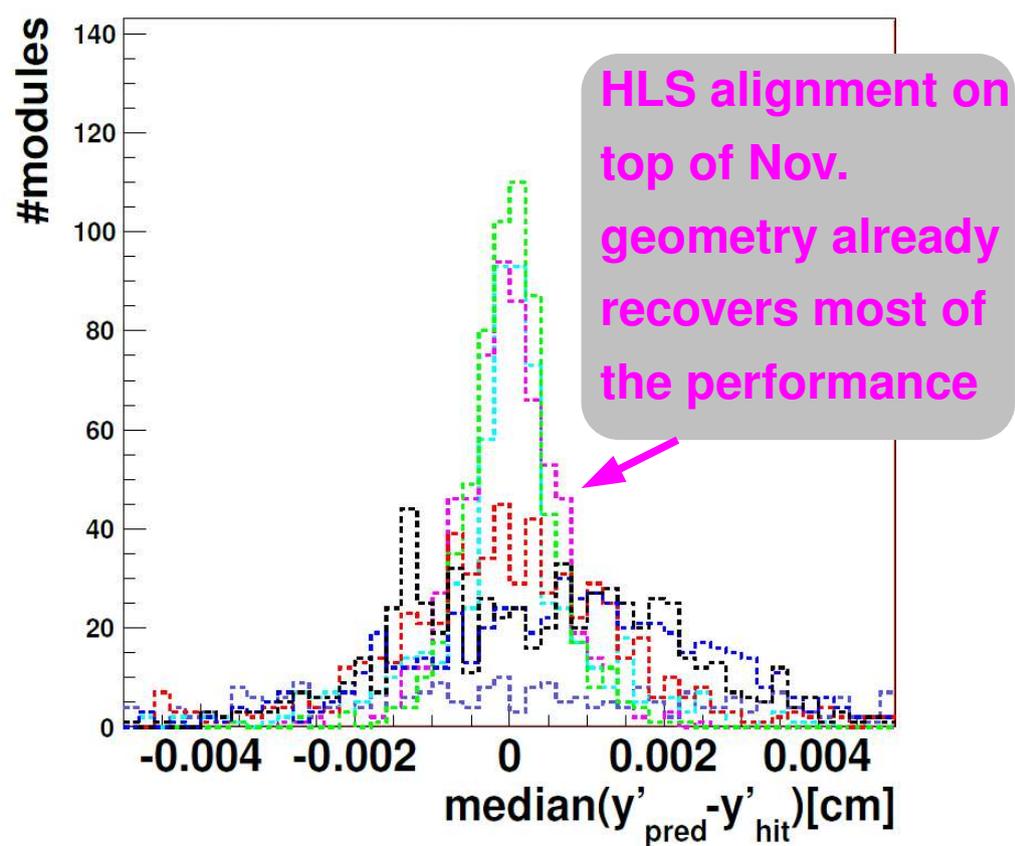

- movement also visible starting cosmics alignment from MinBias geometry

Distribution of the median of the residuals in TPB

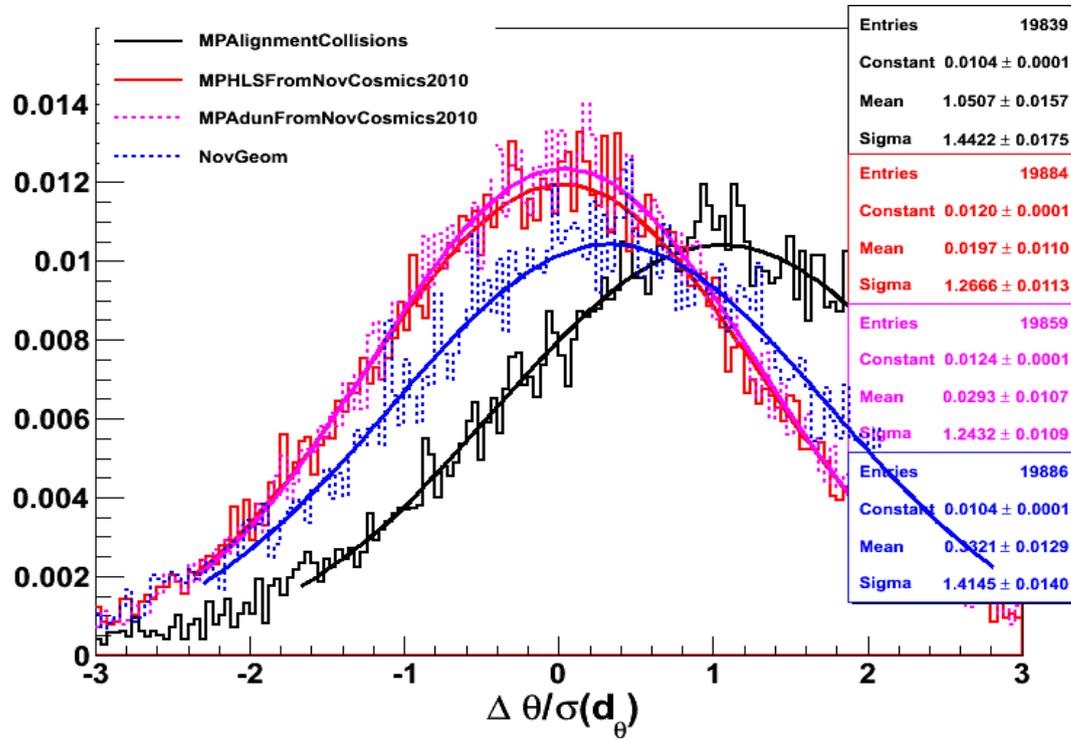

Distribution of the median of the y residuals in TPB

- ■ ■ ■ MPCosmicsAdunMergedFromIdeal
- ■ ■ ■ MPCosmicsAdunMergedFromMinBias
- ■ ■ ■ MPHLSCosmicsNewCPEfromNov
- ■ ■ ■ MPCosmicsAdunMergedFromNov
- ■ ■ ■ MPHLSCosmicsNewCPEfromMinBias
- ■ ■ ■ MPHLSandDetsCollisions
- ■ ■ ■ NovAlignment

- Alignment from Ideal --> insufficient statistics
- MP AdunMerged from Nov. slightly better than MP AdunMerged from MinBias
- **HLS from MinBias** can not recover performance in y although half shells are shifted as well

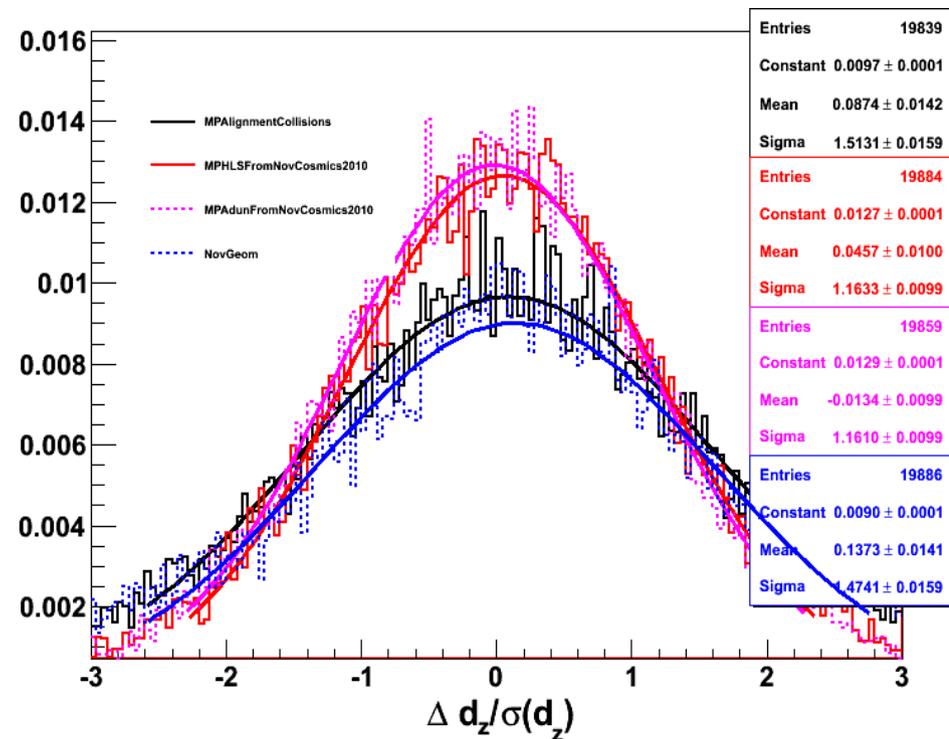

Pairs of Split Tracks

- MP-alignment with collisions norm. theta distribution shifted (mean ~ 1)
- Nov. geometry slight shift (mean 0.3)

- MP-alignment with collisions norm. dz distribution and Nov. geometry slightly broader sigma ~1.5

Pairs of Split Trac

Backup

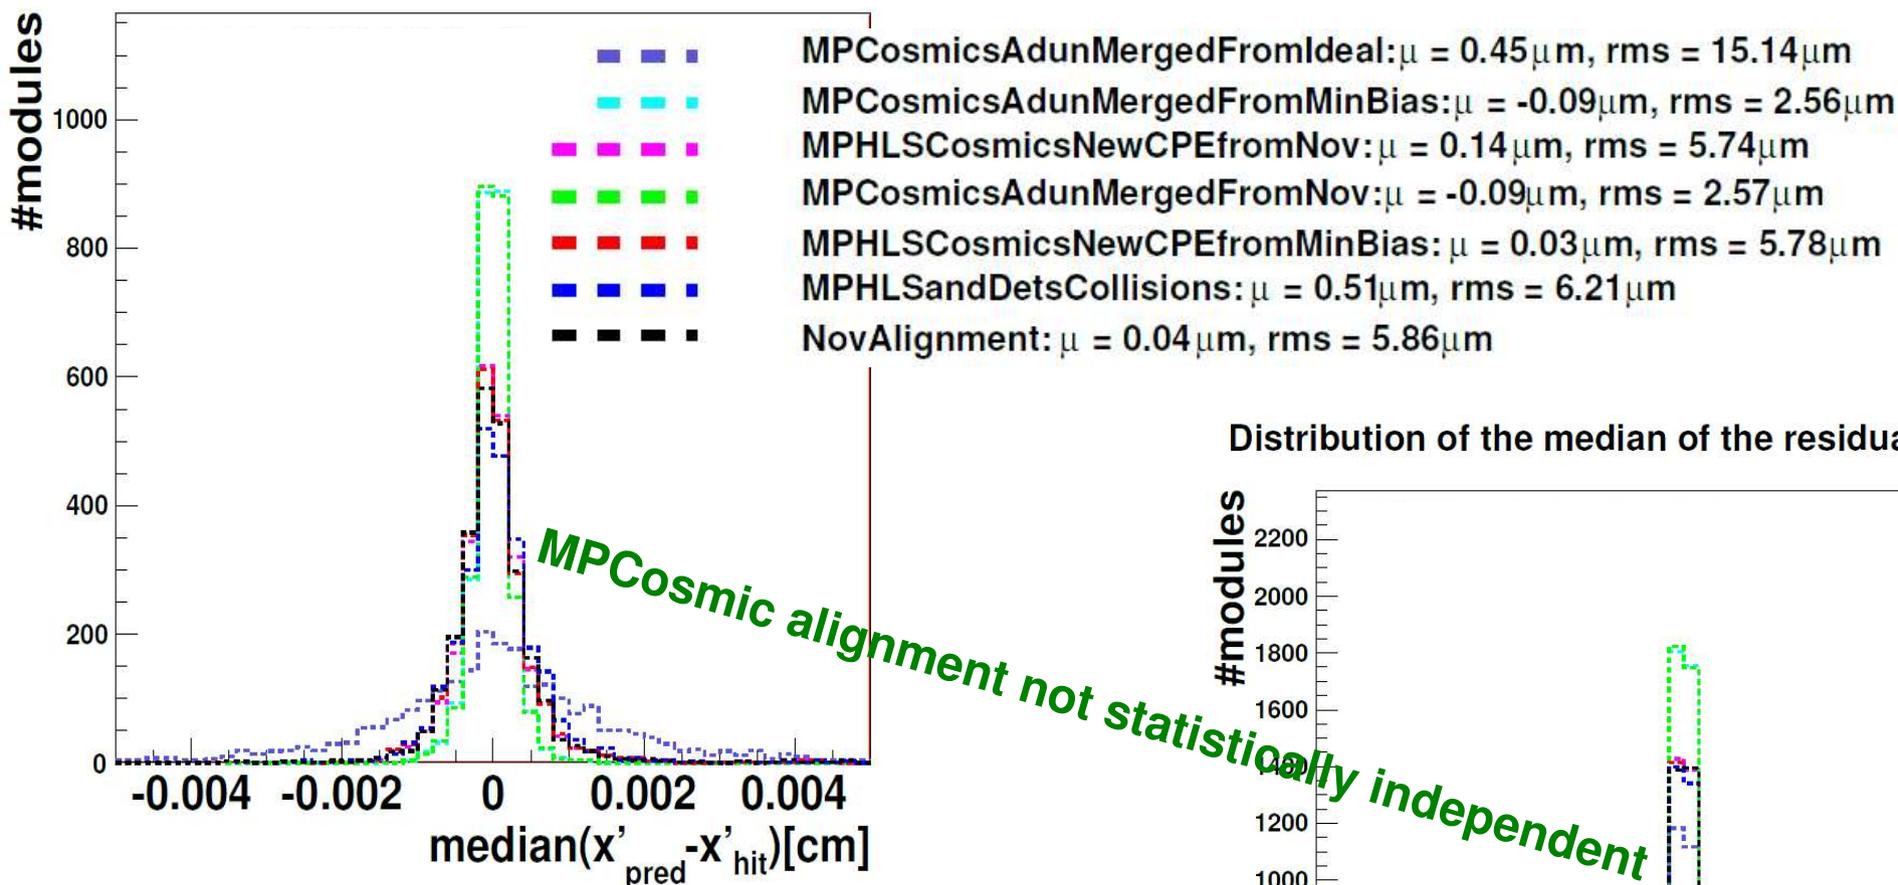

```
%MSG-e Root_Error: AfterBeginJob TUnixSystem::DispatchSignals() 25-Feb-2010  
11:12:25 CET BeforeEvents  
segmentation violation  
%MSG
```

Problem can be solved by

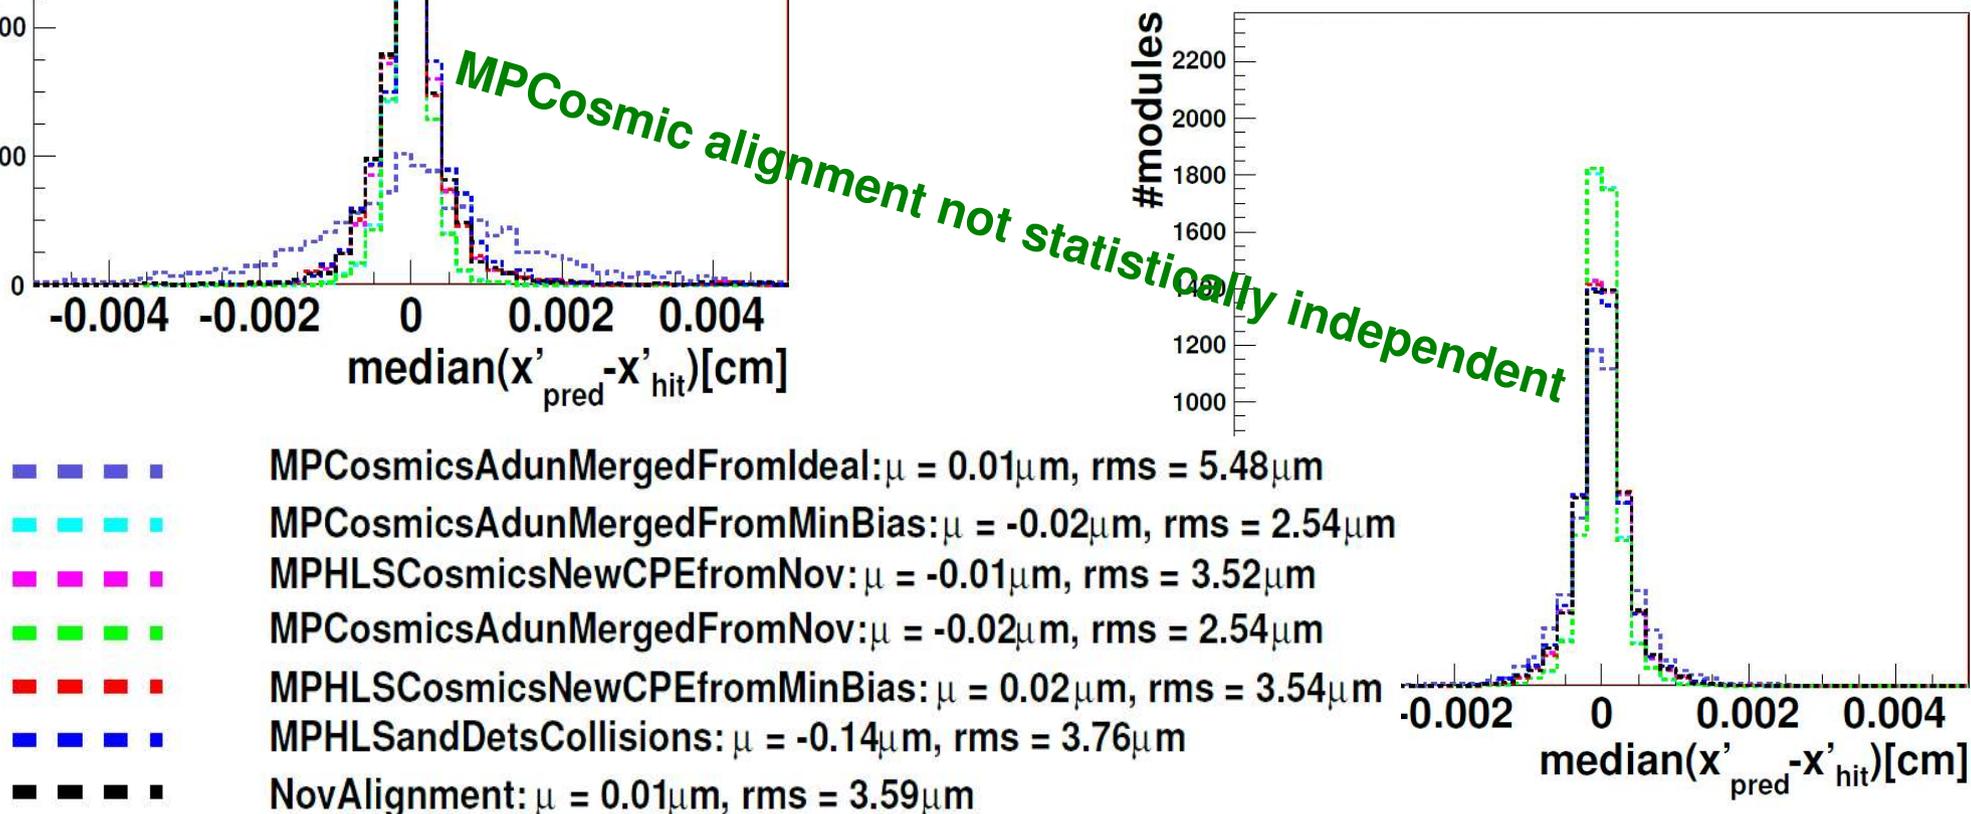

```
process.maxEvents = cms.untracked.PSet(input = cms.untracked.int32(1))
```

???

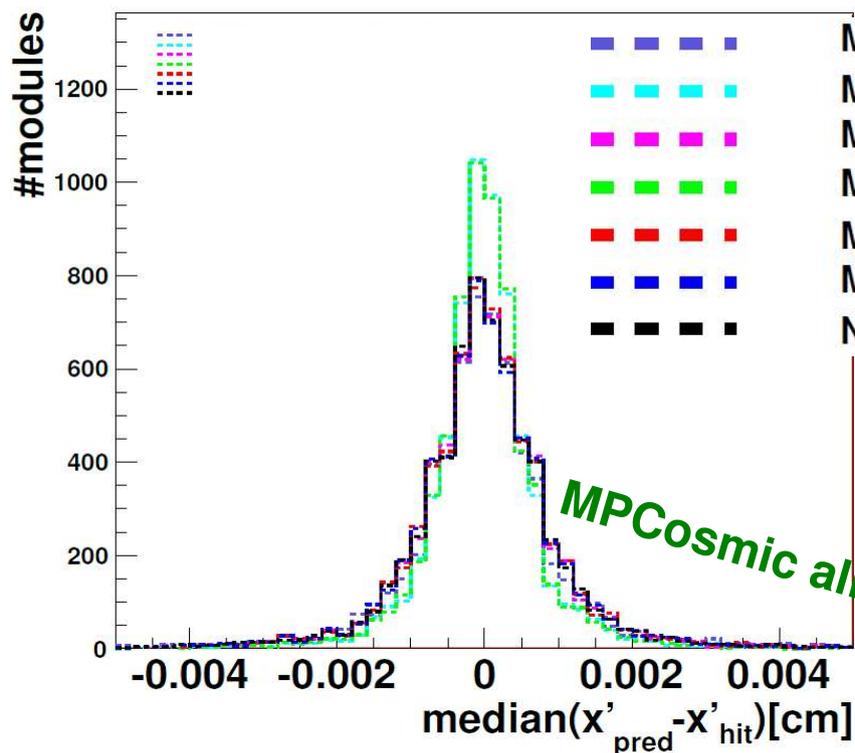

Distribution of the median of the residuals in TIB

Distribution of the median of the residuals in TOB

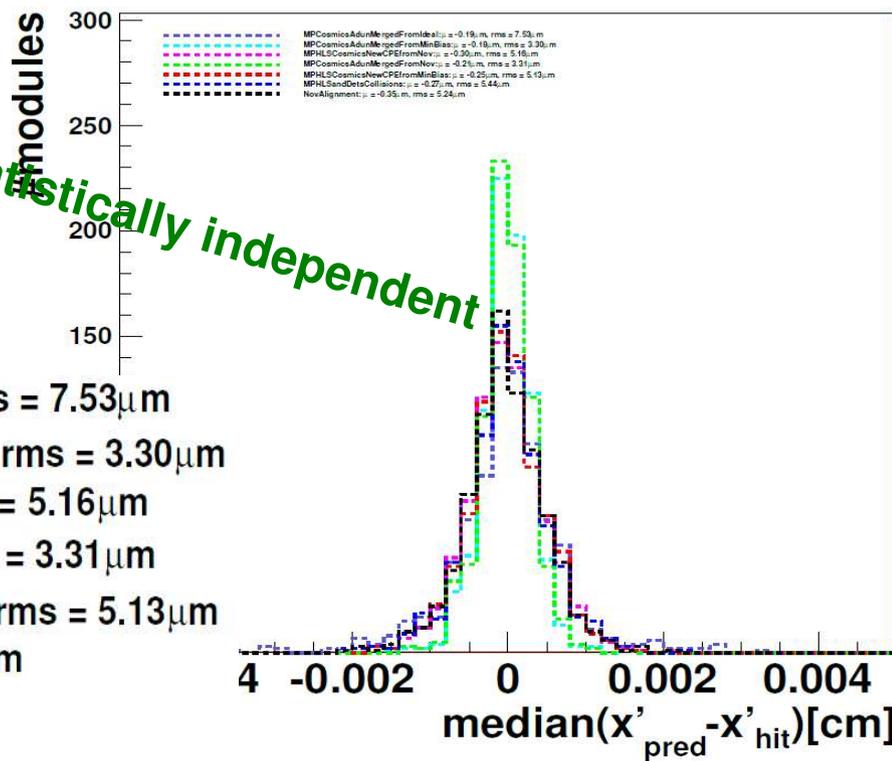

Distribution of the median of the residuals in TEC

- MPCosmicsAdunMergedFromIdeal: $\mu = 0.07 \mu\text{m}$, $\text{rms} = 10.39 \mu\text{m}$
- MPCosmicsAdunMergedFromMinBias: $\mu = -0.12 \mu\text{m}$, $\text{rms} = 7.94 \mu\text{m}$
- MPHLSCosmicsNewCPEfromNov: $\mu = -0.11 \mu\text{m}$, $\text{rms} = 9.81 \mu\text{m}$
- MPCosmicsAdunMergedFromNov: $\mu = -0.15 \mu\text{m}$, $\text{rms} = 7.98 \mu\text{m}$
- MPHLSCosmicsNewCPEfromMinBias: $\mu = -0.10 \mu\text{m}$, $\text{rms} = 9.78 \mu\text{m}$
- MPHLSandDetsCollisions: $\mu = -0.13 \mu\text{m}$, $\text{rms} = 9.91 \mu\text{m}$
- NovAlignment: $\mu = -0.09 \mu\text{m}$, $\text{rms} = 9.82 \mu\text{m}$

MPCosmic alignment not statistically independent

Distribution of the median of the residuals in TID

- MPCosmicsAdunMergedFromIdeal: $\mu = -0.19 \mu\text{m}$, $\text{rms} = 7.53 \mu\text{m}$
- MPCosmicsAdunMergedFromMinBias: $\mu = -0.18 \mu\text{m}$, $\text{rms} = 3.30 \mu\text{m}$
- MPHLSCosmicsNewCPEfromNov: $\mu = -0.30 \mu\text{m}$, $\text{rms} = 5.16 \mu\text{m}$
- MPCosmicsAdunMergedFromNov: $\mu = -0.21 \mu\text{m}$, $\text{rms} = 3.31 \mu\text{m}$
- MPHLSCosmicsNewCPEfromMinBias: $\mu = -0.25 \mu\text{m}$, $\text{rms} = 5.13 \mu\text{m}$
- MPHLSandDetsCollisions: $\mu = -0.27 \mu\text{m}$, $\text{rms} = 5.44 \mu\text{m}$
- NovAlignment: $\mu = -0.35 \mu\text{m}$, $\text{rms} = 5.24 \mu\text{m}$
