

Test-Beam

Surabhi Sharma, Marta Baselga, Ingrid-Maria Gregor

Deutsches Elektronen-Synchrotron (DESY)

LF-CMOS Sensor Meeting- 14.10.2020

Test-Beam Plans

- Planning to perform the Testbeam in the starting of the November (02.11.2020) -> machine week for maintenance, usually there is beam from late Wednesday
 - Planning to use TB21
- Most likely we will get another week in November, this will ensure good amount of data is taken
- Preparation for the Testbeam:
 - Two sensors glued(1 long and 1 short), board is given for the wire bonding
 - Setting up the setup for the Alibava measurement with source and also preparing the cooling setup for the CMOS sensor
 - Performing the lab test beforehand
- Doing a test-beam measurement this week with old sensors to setup the synchronisation of the alibava setup with telescope and TLU
 - Performing measurement in TB24
